|--|----|
| Introduction | ix |
| Chapter 1. A Review of Maritime Operations | 1 |
| 1.1. Maritime transportation | 1 |
| 1.2. Types of ships and cargo | 3 |
| 1.3. Containerization | 5 |
| 1.4. Handling equipment in seaports | 8 |
| 1.4.1. Quay cranes | 10 |
| 1.4.2. Vehicles | 11 |
| 1.4.3. Storage equipment | 13 |
| 1.5. Optimization of maritime operations | 15 |
| 1.6. Conclusion | 19 |
| Chapter 2. Metaheuristic Algorithms | 21 |
| 2.1. Basics of metaheuristics | 21 |
| 2.2. Simulated annealing algorithm | 22 |
| 2.3. Tabu search algorithm | 26 |
| 2.4. Genetic algorithms | 28 |
| 2.5. Particle swarm optimization | 32 |
| 2.6. Ant colony optimization | 34 |
| 2.7. Conclusion | 37 |
| Chapter 3. Metaheuristics for Ship Operations | 39 |
| 3.1. Ship routing problem | 39 |
| 3.1.1. Formulation of the tramp SRP | 42 |
| 3.1.2. A simple GA for the tramp SRP | 46 |
| 3.1.3. An ACO for the liner SRP | 48 |

| | |
|---|------------|
| 3.2. Green maritime transportations | 51 |
| 3.2.1. Mathematical formulation of GSRP | 54 |
| 3.2.2. A PSO for the GSRP | 59 |
| 3.3. Conclusions. | 62 |
| Chapter 4. Optimization of Seaside Operations | 65 |
| 4.1. Berth allocation problem | 65 |
| 4.1.1. Formulation of the BAP | 68 |
| 4.1.2. Representation of the BAP solution | 70 |
| 4.1.3. An SA algorithm for the BAP | 72 |
| 4.1.4. A bi-objective GA for the BAP. | 74 |
| 4.2. BAP in bulk seaports | 76 |
| 4.2.1. Formulation of the BAP in bulk seaports | 77 |
| 4.2.2. SA for the BAP in bulk seaports | 80 |
| 4.3. Quay crane scheduling problem. | 82 |
| 4.3.1. An MILP for the QCSP | 84 |
| 4.3.2. Genetic algorithms for the QCSP | 87 |
| 4.3.3. Tabu search for the QCSP. | 90 |
| 4.3.4. Double cycling QCSP | 92 |
| 4.4. Integrated berth allocation problem. | 95 |
| 4.4.1. A parallel GA for the B&CAP | 98 |
| 4.4.2. PSO for the B&CAP | 101 |
| 4.4.3. A simple hybrid GA for the B&CSP | 108 |
| 4.5. Conclusions. | 111 |
| Chapter 5. Problems in Yard Operations | 113 |
| 5.1. Storage space allocation problem | 113 |
| 5.1.1. Formulation of the SSAP | 116 |
| 5.1.2. GA for the SSAP | 120 |
| 5.2. Yard crane scheduling | 124 |
| 5.2.1. Mathematical formulation of the YCSP. | 126 |
| 5.2.2. A hybrid TS algorithm for the YCSP | 130 |
| 5.3. Intra-terminal transportation. | 135 |
| 5.3.1. Formulation of the dispatching of multi-load vehicles | 139 |
| 5.3.2. A Tabu search for the vehicle routing | 142 |
| 5.3.3. Formulation of the vehicle scheduling problem | 147 |
| 5.3.4. GA for the vehicle scheduling problem | 150 |

| | |
|---|-----|
| 5.4. Integrated storage space allocation problem | 153 |
| 5.4.1. A PSO for integrated SSAP–VSP | 155 |
| 5.4.2. GA for the integrated SSAP–VSP and dispatching of YCs | 158 |
| 5.5. Integrated scheduling of handling equipment. | 161 |
| 5.5.1. Mathematical formulation of the 3D scheduling. | 163 |
| 5.5.2. SA for the 3D scheduling | 172 |
| 5.5.3. A GA for the 3D scheduling | 176 |
| 5.6. Conclusions. | 179 |
| Conclusion | 181 |
| Bibliography | 185 |
| Index | 207 |
