<b>Preface</b> .....	xi
<b>Chapter 1. Reliability-based Design Optimization</b> .....	1
Philippe PUGNET and Abdelkhalak EL HAMI	
1.1. Introduction .....	2
1.2. Reliability-based design optimization .....	5
1.2.1. Risk assessment using predictive reliability calculations .....	7
1.2.2. Identifying elements that are critical for the reliability of the system .....	9
1.2.3. Determination of the distribution of stresses leading to failures .....	11
1.2.4. Determining the critical effect of stresses .....	14
1.2.5. Inducing failures for failure mechanism analysis .....	17
1.2.6. Failure mechanism modeling .....	22
1.2.7. Design optimization .....	23
1.3. Conclusion .....	25
1.4. References .....	26
<b>Chapter 2. Non-destructive Characterization by Spectroscopic Ellipsometry of Interfaces in Mechatronic Devices</b> .....	29
Pierre Richard DAHOO, Malika KHETTAB, Jorge LINARES and Philippe PUGNET	
2.1. Introduction .....	30
2.2. Relationship between the ellipsometric parameters and the optical characteristics of a sample .....	32

2.3. Rotating component or phase modulator ellipsometers . . . . .	34
2.4. Relationship between ellipsometric parameters and intensity of the detected signal. . . . .	35
2.5. Analysis of experimental data . . . . .	36
2.6. The stack structural model . . . . .	39
2.7. The optical model . . . . .	40
2.8. Application of ellipsometry technique . . . . .	43
2.8.1. Thin layer from silver nanograins sintered on a copper substrate. . . . .	45
2.8.2. Analysis of ellipsometric spectra of polymers on different substrates . . . . .	48
2.8.3. Analysis and comparison after stress . . . . .	53
2.8.4. Physical analysis of light and matter interaction in terms of band gap energy. . . . .	54
2.9. Conclusion . . . . .	56
2.10. References . . . . .	57

<b>Chapter 3. Method of Characterizing the Electromagnetic Environment in Hyperfrequency Circuits Encapsulated Within Metallic Cavities . . . . .</b>	61
---	----

Samh KHEMIRI, Abhishek RAMANUJAN, Moncef KADI and Zouheir RIAH

3.1. Introduction . . . . .	61
3.2. Theory of metallic cavities . . . . .	62
3.2.1. Definition. . . . .	62
3.2.2. Electromagnetic field in a parallelepiped cavity . . . . .	63
3.2.3. Resonance frequencies . . . . .	63
3.3. Effect of metal cavities on the radiated emissions of microwave circuits. . . . .	65
3.3.1. Circuit case study: $50 \Omega$ microstrip line. . . . .	65
3.4. Approximation of the electromagnetic field radiated in the presence of the cavity from the electromagnetic field radiated without cavity . . . . .	71
3.4.1. Principle of the approach . . . . .	71
3.4.2. Radiated emission model . . . . .	72
3.4.3. Results and discussion . . . . .	77
3.5. Conclusion . . . . .	80
3.6. References . . . . .	81

---

**Chapter 4. Metrology of Static and Dynamic Displacements  
and Deformations Using Full-Field Techniques . . . . .** 83

Ioana NISTEA and Dan BORZA

4.1. Introduction . . . . .	83
4.2. Speckle interferometry . . . . .	86
4.2.1. Principles of displacement field metrology by speckle interferometry . . . . .	86
4.2.2. Description of the speckle interferometry measurement setup . . . . .	94
4.2.3. Examples of static displacement field measurements . . . . .	95
4.2.4. Examples of measurements of vibration displacements fields . . . . .	105
4.2.5. Examples of dynamic measurements . . . . .	111
4.3. Moiré projection . . . . .	112
4.3.1. Measurement principles of Moiré projection for displacement fields . . . . .	113
4.3.2. Description of the Moiré projection measurement setup . . . . .	114
4.3.3. Examples of displacement field metrology by Moiré projection . . . . .	115
4.4. Structured light projection . . . . .	116
4.4.1. Principles of structured light projection for measuring surface topography . . . . .	116
4.4.2. Description of the structured light projection measurement setup . . . . .	118
4.4.3. Examples of surface topography measurements by structured light projection . . . . .	118
4.5. Conclusion . . . . .	120
4.6. References . . . . .	121

**Chapter 5. Characterization of Switching Transistors  
Under Electrical Overvoltage Stresses . . . . .** 123

Patrick MARTIN, Ludovic LACHEZE, Alain KAMDEL and Philippe DESCAMPS

5.1. Introduction . . . . .	123
5.2. Stress test over ESD/EOV electric constraints . . . . .	124
5.2.1. Description of the TPG test equipment . . . . .	124
5.2.2. Stresses applied to the transistor . . . . .	126
5.2.3. Testing procedure . . . . .	128
5.2.4. TPG capabilities . . . . .	129

5.3. Simulation results . . . . .	129
5.3.1. Highlighted phenomena . . . . .	129
5.3.2. Influence of parasitic phenomena . . . . .	130
5.4. Experimental setup . . . . .	133
5.4.1. Measurement results and analysis of observed phenomena . . . . .	134
5.5. Conclusion . . . . .	142
5.6. References . . . . .	143

**Chapter 6. Reliability of Radio Frequency Power Transistors to Electromagnetic and Thermal Stress . . . . .** 145

Samh KHEMIRI and Moncef KADI

6.1. Introduction . . . . .	145
6.2. The GaN technology . . . . .	146
6.3. Radiated electromagnetic stress . . . . .	148
6.3.1. Presentation of the test equipment . . . . .	148
6.3.2. Results and analysis . . . . .	149
6.4. RF CW continuous stress . . . . .	153
6.4.1. Presentation of the test equipment . . . . .	153
6.4.2. Results and analysis . . . . .	154
6.5. Thermal exposure . . . . .	156
6.5.1. Presentation of the test equipment . . . . .	156
6.5.2. Results and analysis . . . . .	157
6.6. Combined stresses: RF CW + electromagnetic (EM) and electric + EM . . . . .	159
6.6.1. Effect of the simultaneous application of EM and RF stresses . . . . .	160
6.6.2. Effect of the simultaneous application of electromagnetic and continuous DC stresses . . . . .	162
6.7. Conclusion . . . . .	164
6.8. References . . . . .	165

**Chapter 7. Internal Temperature Measurement of Electronic Components . . . . .** 169

Eric JOUBERT, Olivier LATRY, Pascal DHERBECOURT, Maxime FONTAINE, Christian GAUTIER, Hubert POLAERT and Philippe EUDELINÉ

7.1. Introduction . . . . .	169
7.2. Experimental setup . . . . .	170
7.3. Measurement results . . . . .	173
7.3.1. IR measurements . . . . .	173

---

7.3.2. Electrical measures . . . . .	176
7.3.3. Optical measurement methods . . . . .	178
7.3.4. Comparison between infrared and electrical methods . . . . .	183
7.4. Conclusion . . . . .	186
7.5. References . . . . .	188
<b>Chapter 8. Reliability Prediction of Embedded Electronic Systems: the FIDES Guide . . . . .</b>	<b>189</b>
Philippe POUNGET, Franck BAYLE, Hichame MAANANE and Pierre Richard DAHOO	
8.1. Introduction . . . . .	189
8.2. Presentation of the FIDES guide . . . . .	191
8.2.1. Global modeling . . . . .	191
8.2.2. Generic model . . . . .	191
8.2.3. Mathematical foundations . . . . .	192
8.2.4. Justifying the use of a constant failure rate/intensity . . . . .	194
8.2.5. Assessing $\lambda_0$ . . . . .	195
8.2.6. Acceleration factors . . . . .	195
8.2.7. Life profile . . . . .	196
8.2.8. Testing performed at electronic board level . . . . .	199
8.2.9. Component-level testing . . . . .	201
8.2.10. “Component family” testing . . . . .	202
8.2.11. Example of “MOSFET” power transistors . . . . .	203
8.3. FIDES calculation on an automotive mechatronic system . . . . .	204
8.3.1. Goals of the FIDES calculation . . . . .	206
8.3.2. Methodology . . . . .	206
8.3.3. Life profile . . . . .	207
8.3.4. Results for the SMI board components . . . . .	212
8.3.5. Results for the FR4 board components . . . . .	212
8.3.6. Failure rate of the DC-DC converter . . . . .	213
8.3.7. Effect of the amplitude of the thermal cycles on the lifetime . . . . .	214
8.3.8. Comparison with the results of the UTE C 80-810 standard . . . . .	214
8.4. Conclusion . . . . .	215
8.5. References . . . . .	215

<b>Chapter 9. Multi-objective Optimization in Fluid–Structure Interaction . . . . .</b>	217
Rabii EL MAANI, Abdelkhalak EL HAMI and Bouchaïb RADI	
9.1. Introduction . . . . .	217
9.2. Backtracking search algorithm . . . . .	220
9.2.1. Initialization . . . . .	220
9.2.2. Selection I . . . . .	221
9.2.3. Mutation operator . . . . .	221
9.2.4. Crossover operator . . . . .	222
9.2.5. Selection II . . . . .	222
9.3. Multi-objective optimization problem . . . . .	223
9.4. Proposed algorithm . . . . .	224
9.4.1. Fast non-dominated sorting . . . . .	225
9.4.2. Crowding distance . . . . .	226
9.4.3. Numerical validation . . . . .	227
9.5. Application to FSI problems . . . . .	231
9.5.1. Statement of the FSI problems . . . . .	231
9.5.2. Process of FSI optimization . . . . .	235
9.5.3. Application to the Onera M6 wing . . . . .	236
9.6. Conclusion . . . . .	245
9.7. References . . . . .	246
<b>List of Authors . . . . .</b>	251
<b>Index . . . . .</b>	255
