<b>Preface . . . . .</b>	<b>x<sup>i</sup></b>
Noël CHALLAMEL, Julius KAPLUNOV and Izuru TAKEWAKI	
<b>Chapter 1. Bolotin's Dynamic Edge Effect Method Revisited (Review) . . . . .</b>	<b>1</b>
Igor V. ANDRIANOV and Lelya A. KHAJIYEVA	
1.1. Introduction . . . . .	1
1.2. Toy problem: natural beam oscillations . . . . .	2
1.3. Linear problems solved . . . . .	6
1.4. Generalization for the nonlinear case . . . . .	8
1.5. DEEM and variational approaches . . . . .	12
1.6. Quasi-separation of variables and normal modes of nonlinear oscillations of continuous systems . . . . .	16
1.7. Short-wave (high-frequency) asymptotics. Possible generalizations of DEEM	17
1.8. Conclusion: DEEM, highly recommended . . . . .	19
1.9. Acknowledgments . . . . .	20
1.10. Appendix . . . . .	20
1.11. References . . . . .	21
<b>Chapter 2. On the Principles to Derive Plate Theories . . . . .</b>	<b>29</b>
Marcus ABMUS and Holm ALTENBACH	
2.1. Introduction . . . . .	29
2.2. Some historical remarks . . . . .	30
2.3. Possibilities to formulate plate theories. . . . .	31
2.3.1. Theories based on hypotheses . . . . .	32
2.3.2. Reduction of the governing equations by mathematical techniques . . . . .	33
2.3.3. Direct approach . . . . .	34
2.3.4. Consistent approach . . . . .	36

2.4. Shear correction . . . . .	36
2.5. Conclusion . . . . .	38
2.6. References . . . . .	39

**Chapter 3. A Softening–Hardening Nanomechanics Theory for the Static and Dynamic Analyses of Nanorods and Nanobeams: Doublet Mechanics . . . . .** 43

Ufuk GUL and Metin AYDOGDU

3.1. Introduction . . . . .	43
3.2. Doublet mechanics formulation . . . . .	46
3.3. Governing equations . . . . .	49
3.3.1. Static equilibrium equations of a nanorod with periodic micro- and nanostructures . . . . .	49
3.3.2. Equations of motion of a nanorod with periodic micro- and nanostructures . . . . .	51
3.3.3. Static equilibrium equations of a nanobeam with periodic micro- and nanostructures . . . . .	53
3.3.4. Equations of motion of a nanobeam with periodic micro- and nanostructures . . . . .	55
3.4. Analytical solutions . . . . .	56
3.4.1. Axial deformation of nanorods with periodic nanostructures . . . . .	56
3.4.2. Vibration analysis of nanorods with periodic nanostructures . . . . .	57
3.4.3. Axial wave propagation in nanorods with periodic nanostructures . . . . .	58
3.4.4. Flexural deformation of nanobeams with periodic nanostructures . . . . .	59
3.4.5. Buckling analysis of nanobeams with periodic nanostructures . . . . .	60
3.4.6. Vibration analysis of nanobeams with periodic nanostructures . . . . .	60
3.4.7. Flexural wave propagation in nanobeams with periodic nanostructures . . . . .	61
3.5. Numerical results . . . . .	62
3.6. Conclusion . . . . .	75
3.7. References . . . . .	76

**Chapter 4. Free Vibration of Micro-Beams and Frameworks Using the Dynamic Stiffness Method and Modified Couple Stress Theory . . . . .** 79

J.R. BANERJEE

4.1. Introduction . . . . .	80
4.2. Formulation of the potential and kinetic energies . . . . .	83
4.3. Derivation of the governing differential equations . . . . .	86
4.4. Development of the dynamic stiffness matrix . . . . .	88
4.4.1. Axial stiffnesses . . . . .	89
4.4.2. Bending stiffnesses . . . . .	90
4.4.3. Combination of axial and bending stiffnesses . . . . .	92
4.4.4. Transformation matrix . . . . .	93

---

4.5. Application of the Wittrick–Williams algorithm . . . . .	94
4.6. Numerical results and discussion . . . . .	95
4.7. Conclusion . . . . .	104
4.8. Acknowledgments . . . . .	104
4.9. References . . . . .	104
<b>Chapter 5. On the Geometric Nonlinearities in the Dynamics of a Planar Timoshenko Beam . . . . .</b>	<b>109</b>
Stefano LENCI and Giuseppe REGA	
5.1. Introduction . . . . .	109
5.2. The geometrically exact planar Timoshenko beam . . . . .	114
5.3. The asymptotic solution . . . . .	117
5.4. The importance of nonlinear terms . . . . .	119
5.4.1. An initial case . . . . .	119
5.4.2. The effect of the slenderness . . . . .	126
5.4.3. The effect of the end spring . . . . .	130
5.4.4. The effect of the resonance order . . . . .	131
5.5. Simplified models . . . . .	134
5.5.1. Neglecting axial inertia . . . . .	135
5.5.2. One-field equation . . . . .	136
5.5.3. The Euler–Bernoulli nonlinear beam . . . . .	138
5.6. Conclusion . . . . .	139
5.7. References . . . . .	140
<b>Chapter 6. Statics, Dynamics, Buckling and Aeroelastic Stability of Planar Cellular Beams . . . . .</b>	<b>143</b>
Angelo LUONGO	
6.1. Introduction . . . . .	143
6.2. Continuous models of planar cellular structures . . . . .	145
6.2.1. Timoshenko beam . . . . .	145
6.2.2. Shear beam . . . . .	147
6.2.3. Elastic constant identification . . . . .	148
6.3. The grid beam . . . . .	149
6.3.1. Rigid transverse model . . . . .	150
6.3.2. Flexible transverse model . . . . .	151
6.3.3. Comparison among models . . . . .	152
6.4. Buckling . . . . .	154
6.4.1. Formulation . . . . .	154
6.4.2. Critical loads . . . . .	156
6.5. Dynamics . . . . .	158
6.5.1. Timoshenko beam . . . . .	158
6.5.2. Shear beam and discrete spring–mass model . . . . .	159

6.6. Aeroelastic stability . . . . .	160
6.6.1. Modeling a base-isolated tower . . . . .	160
6.6.2. Critical wind velocity . . . . .	162
6.7. References . . . . .	163
<b>Chapter 7. Collapse Limit of Structures under Impulsive Loading via Double Impulse Input Transformation . . . . .</b>	<b>167</b>
Izuru TAKEWAKI, Kotaro KOJIMA and Sae HOMMA	
7.1. Introduction . . . . .	167
7.2. Collapse limit corresponding to the critical timing of second impulse . . . . .	171
7.3. Classification of collapse patterns in non-critical case . . . . .	175
7.4. Analysis of collapse limit using energy balance law . . . . .	177
7.4.1. Collapse Pattern 1' . . . . .	177
7.4.2. Collapse Pattern 2' . . . . .	178
7.4.3. Collapse Pattern 3' . . . . .	179
7.4.4. Collapse Pattern 4' . . . . .	179
7.5. Verification of proposed collapse limit via time-history response analysis . . . . .	181
7.6. Conclusion . . . . .	182
7.7. References . . . . .	183
<b>Chapter 8. Nonlinear Dynamics and Phenomena in Oscillators with Hysteresis . . . . .</b>	<b>185</b>
Fabrizio VESTRONI and Paolo CASINI	
8.1. Introduction . . . . .	186
8.2. Hysteresis model and SDOF response to harmonic excitation . . . . .	187
8.3. 2DOF hysteretic systems . . . . .	190
8.3.1. Equations of motion . . . . .	191
8.3.2. Modal characteristics . . . . .	192
8.4. Nonlinear modal interactions in 2DOF hysteretic systems . . . . .	192
8.4.1. Top-hysteresis configuration (TC) . . . . .	192
8.4.2. Base-hysteresis configuration (BC) . . . . .	195
8.5. Conclusion . . . . .	198
8.6. Acknowledgments . . . . .	199
8.7. Appendix: Mechanical characteristics of SDOF and 2DOF systems . . . . .	199
8.8. References . . . . .	200
<b>Chapter 9. Bridging Waves on a Membrane: An Approach to Preserving Wave Patterns . . . . .</b>	<b>203</b>
Peter WOOTTON and Julius KAPLUNOV	
9.1. Introduction . . . . .	203
9.2. Problem statement . . . . .	205

---

9.3. Homogenized bridge . . . . .	209
9.4. Internal reflections . . . . .	213
9.5. Discrete bridge . . . . .	217
9.6. Net bridge . . . . .	222
9.7. Concluding remarks . . . . .	226
9.8. Acknowledgments . . . . .	227
9.9. References . . . . .	227
<b>Chapter 10. Dynamic Soil Stiffness of Foundations Supported by Layered Half-Space . . . . .</b>	<b>231</b>
Yang ZHOU and Wei-Chau XIE	
10.1. Introduction . . . . .	231
10.2. Generation of dynamic soil stiffness . . . . .	233
10.2.1. Dynamic stiffness matrix under point loads . . . . .	233
10.2.2. Formulation of the flexibility function . . . . .	236
10.2.3. Formulation of Green's influence function . . . . .	237
10.2.4. Total dynamic soil stiffness by the boundary element method . . . . .	239
10.3. Numerical examples of the generation of dynamic soil stiffness . . . . .	242
10.3.1. A rigid square foundation supported by a layer on half-space . . . . .	243
10.3.2. A rigid circular foundation supported by a layer on half-space . . . . .	244
10.3.3. A rigid circular foundation supported by half-space and a layer on half-space . . . . .	244
10.4. Numerical examples of the generation of FRS . . . . .	245
10.5. Conclusion . . . . .	250
10.6. References . . . . .	250
<b>List of Authors . . . . .</b>	<b>253</b>
<b>Index . . . . .</b>	<b>255</b>
<b>Summaries of Volumes 1 and 3 . . . . .</b>	<b>257</b>
