Chapter 10. Removal of Micropollutants	1
10.1. Introduction	1
10.2. Pesticides	2
10.3. Pharmaceuticals and industrial waste	4
10.4. Pesticide removal technologies and emerging MPs	12
10.4.1. Adsorption onto activated carbon (AC)	13
10.4.2. Ozonation.	51
10.4.3. Ozone-activated carbon combination	66
10.4.4. Advanced chemical oxidation.	71
10.4.5. Nanofiltration and reverse osmosis membranes	80
10.5. Frogbox [®] : an effective monitoring and control tool	95
10.6. The evolution of micropollutants in drinking water plants	97
10.7. References.	99
Chapter 11. Removal of Perfluorinated Compounds	105
11.1. Physicochemical properties.	106
11.2. Presence in the water	108
11.3. Drinking water regulations	108
11.4. Treatments.	108
11.4.1. Coagulation–flocculation–settling (or flotation)	108
11.4.2. Chemical oxidation	109
11.4.3. UV oxidation.	109
11.4.4. Activated carbon	109
11.4.5. High-pressure membranes: nanofiltration and reverse osmosis . .	115
11.5. Conclusion	120
11.6. References.	121

Chapter 12. Biological Removal of Ammonia	125
12.1. The principle of biological nitrification	125
12.2. Design parameters	127
12.2.1. Dissolved oxygen	127
12.2.2. Filtration rate.	129
12.2.3. NH_4^+ concentration removed as a function of temperature ($^{\circ}\text{C}$).	129
12.2.4. Applicable volume load	129
12.2.5. Contact time	131
12.2.6. Material height.	131
12.3. Factors limiting oxygen	131
12.3.1. Mineral carbon.	131
12.3.2. pH	132
12.3.3. Temperature	132
12.3.4. Other elements.	133
12.3.5. Biological filter washing.	133
12.4. Implementation.	134
12.4.1. Sand filtration	134
12.5. Biofilters (Biocarbon [®] process)	137
12.6. Water treatment stations	140
12.6.1. Treatment stations with conventional sand, dual media or GAC filtration.	140
12.6.2. Treatment stations with Biocarbon [®] filters	143
12.7. References	146
Chapter 13. Nitrate Removal.	149
13.1. Biological treatment	150
13.1.1. Biochemical reactions	151
13.1.2. Nitrite formation.	153
13.1.3. The bacteriological aspect	154
13.1.4. Biofilter description (Biodenit [®] process)	154
13.1.5. Water treatment stations including biological denitrification	159
13.1.6. Factors affecting biological denitrification	163
13.1.7. Design parameters: applied volumic load	166
13.1.8. Design parameters: minimum contact time (t_c min).	167
13.1.9. Design parameters: height of Biodagen [®] material (m)	167
13.1.10. Design parameters: material volume (m^3)	168
13.1.11. Partial treatment	168
13.1.12. Sludge production	170
13.1.13. The reagents	170
13.1.14. Biological denitrification implementation and exploitation.	174

13.2. Treatment with ion exchange resins.	175
13.2.1. General exchange mechanism (Ecodenit [®] process)	176
13.2.2. Ecodenit [®] process technology.	180
13.2.3. Integration into the water treatment station.	187
13.2.4. Packaged solutions	188
13.3. Nitrate removal by high pressure membranes.	188
13.4. References.	194
Chapter 14. Removal of Perchlorates	199
14.1. General aspects.	200
14.2. Main processes for removing perchlorate ions	200
14.2.1. Ion exchange resins	201
14.2.2. Nanofiltration membranes	208
14.3. Conclusions regarding the removal of perchlorates	211
14.4. References.	212
Chapter 15. Water Softening.	215
15.1. Water hardness	215
15.2. Alkalinity	216
15.3. Langelier index (LI or LSI).	220
15.4. Drinking water hardness goals.	220
15.5. General principles of water softening.	221
15.5.1. The main chemical reactions with lime and soda	224
15.6. Water softening chemical processes	233
15.6.1. Limitations of the process and empirical considerations	234
15.7. Veolia water softening technologies	235
15.7.1. Clariflocculator	235
15.7.2. Actiflo [®] softening.	238
15.7.3. Multiflo [®] softening	243
15.7.4. Catalytic water softening.	248
15.8. Saphira [®] process	283
15.9. Water softening using high-pressure membranes.	286
15.10. Water softening using ion exchange resins.	286
15.10.1. Resin resistance: use precautions	287
15.10.2. Ca ²⁺ and Mg ²⁺ removal	288
15.10.3. Bicarbonate removal	289
15.10.4. Resin operating capacity	290
15.10.5. Operating parameters	290

15.11. Comparison between the four water softening solutions discussed	292
15.11.1. Advantages and limitations of the different solutions	292
15.12. References	293
Chapter 16. Metal Removal.	297
16.1. Iron and manganese removal: general aspects.	297
16.1.1. Presence of iron and manganese at the resource level.	297
16.1.2. Presence of iron and manganese at the production level	299
16.1.3. Regulatory aspects of iron and manganese	301
16.1.4. Iron and manganese treatments	302
16.2. Arsenic removal	356
16.2.1. Arsenic chemistry	357
16.2.2. Arsenic treatments	360
16.3. Removal of selenium (Se)	391
16.3.1. The chemistry of selenium.	392
16.3.2. Selenium removal treatments	394
16.4. Nickel removal	402
16.4.1. The chemistry of nickel	402
16.4.2. Nickel removal treatment	403
16.5. References.	412
Index	423
Summaries of other volumes	425
