<b>Preface</b> . . . . .	x <sup>i</sup>
Stephen Christopher MABERY and Brigitte GONTERO	
<b>Chapter 1. An Introduction to Productivity and Carbon Cycling in Aquatic Ecosystems</b> . . . . .	1
Brigitte GONTERO, Timothy M. LENTON and Stephen Christopher MABERY	
1.1. Overview . . . . .	1
1.2. Light and productivity on Earth . . . . .	2
1.3. Converting light energy into chemical energy. . . . .	4
1.3.1. Underwater light . . . . .	4
1.3.2. The primary phase of photosynthesis . . . . .	4
1.4. Carbon fixation . . . . .	6
1.4.1. Inorganic carbon in air and water . . . . .	6
1.4.2. Mechanisms of carbon fixation . . . . .	10
1.5. The global carbon cycle . . . . .	12
1.6. Perspectives . . . . .	19
1.7. Acknowledgments . . . . .	19
1.8. References . . . . .	20
<b>Chapter 2. Evolution of Aquatic Photoautotrophs</b> . . . . .	27
John A. RAVEN	
2.1. Background . . . . .	27
2.2. Anoxygenic photosynthetic bacteria . . . . .	28
2.3. Cyanobacteria . . . . .	30
2.4. Photosynthetic eukaryotes . . . . .	32
2.5. References . . . . .	36

<b>Chapter 3. Biogeographical Patterns and Genomes of Aquatic Photoautotrophs . . . . .</b>	43
Juan José PIERELLA KARLUSICH, Charlotte NEF, Chris BOWLER and Richard G. DORRELL	
3.1. Introduction – the changing face of algal genomes . . . . .	43
3.2. Diversity of algae and their chloroplasts . . . . .	46
3.3. Genomic insights into algal evolution . . . . .	49
3.4. Limitations of cultured algal sequencing projects . . . . .	50
3.5. History of omics-based approaches applied to environmental plankton samples . . . . .	54
3.6. Biogeographical insights of algae from <i>Tara Oceans</i> metabarcoding . . . . .	55
3.7. Functional studies of algae from <i>Tara Oceans</i> metagenomic and metatranscriptomic data . . . . .	59
3.8. Applying genome-resolved metagenomics to phototrophic eukaryotes . . . . .	61
3.9. Perspectives . . . . .	63
3.10. Acknowledgments . . . . .	66
3.11. References . . . . .	67
<b>Chapter 4. Inorganic Carbon Acquisition by Aquatic Primary Producers . . . . .</b>	81
Sebastian D. ROKITTA, Sven A. KRANZ and Björn ROST	
4.1. Overview . . . . .	81
4.2. Rubisco and the problem of its own success . . . . .	82
4.3. Dissolved inorganic carbon and its behavior in water . . . . .	84
4.4. Disequilibrium situations and implications of transport processes . . . . .	88
4.5. CCM operation in cyanobacteria . . . . .	93
4.6. CCM operation in green algae . . . . .	96
4.7. CCM operation in diatoms . . . . .	98
4.8. CCM operation in the coccolithophore <i>Emiliania huxleyi</i> . . . . .	101
4.9. CCM operation in macroalgae, seagrasses and freshwater plants . . . . .	105
4.10. CCM operation and its coupling with co-occurring processes . . . . .	110
4.11. Future research foci . . . . .	112
4.12. Acknowledgments . . . . .	114
4.13. References . . . . .	114
<b>Chapter 5. Biochemical Carbon Dioxide Concentrating Mechanisms . . . . .</b>	133
Brigitte GONTERO and Stephen C. MABERLY	
5.1. Introduction . . . . .	133
5.2. Carbon-fixation by Rubisco in the C <sub>3</sub> pathway . . . . .	134
5.3. The C <sub>4</sub> CO <sub>2</sub> concentrating mechanism . . . . .	138
5.3.1. C <sub>4</sub> in terrestrial plants . . . . .	138
5.3.2. C <sub>4</sub> in aquatic plants and algae . . . . .	141

---

5.4. The CAM CO <sub>2</sub> concentrating mechanism . . . . .	150
5.4.1. Terrestrial CAM . . . . .	150
5.4.2. Aquatic CAM . . . . .	150
5.5. Conclusions and perspectives . . . . .	153
5.6. Acknowledgments . . . . .	154
5.7. References . . . . .	155
<b>Chapter 6. Carbonic Anhydrase . . . . .</b>	<b>167</b>
Yusuke MATSUDA, Hermanus NAWALY, Kohei YONEDA	
6.1. Overview . . . . .	167
6.2. Introduction . . . . .	168
6.3. Types of CA . . . . .	169
6.3.1. Alpha CA . . . . .	169
6.3.2. Beta CA . . . . .	170
6.3.3. Gamma CA . . . . .	172
6.3.4. Delta CA . . . . .	173
6.3.5. Epsilon CA . . . . .	174
6.3.6. Eta CA . . . . .	174
6.3.7. Zeta CA . . . . .	175
6.3.8. Theta CA . . . . .	176
6.3.9. Iota CA . . . . .	177
6.3.10. Subclasses and primary sequences . . . . .	178
6.4. The functions of CAs in aquatic photoautotrophs . . . . .	178
6.5. Regulation of CO <sub>2</sub> efflux by CA at the chloroplast envelope . . . . .	181
6.6. Summary: CAs in red and green photosynthesis . . . . .	183
6.7. References . . . . .	187
<b>Chapter 7. Rubisco Microcompartments: The Function of Carboxysomes and Pyrenoids in Aquatic CO<sub>2</sub>-Concentrating Mechanisms . . . . .</b>	<b>197</b>
Moritz T. MEYER	
7.1. Introduction . . . . .	197
7.2. The cyanobacterial CCM . . . . .	199
7.2.1. Cyanobacteria accumulate bicarbonate through high- and low-affinity uptake systems . . . . .	199
7.2.2. Carboxysomes belong to two distinct evolutionary lineages . . . . .	201
7.2.3. Carboxysomes isolate Rubisco from the rest of the CBB cycle . . . . .	203
7.2.4. Carboxysome shells are composed of thousands of self-assembling capsid proteins . . . . .	204
7.2.5. Alpha and beta carboxysomes package the enzymatic cargo with different protein linkers . . . . .	205
7.3. The algal CCM . . . . .	207

---

7.3.1. The model alga <i>Chlamydomonas</i> has multiple acclimation states . . . . .	207
7.3.2. <i>Chlamydomonas</i> has a cooperative CO <sub>2</sub> –HCO <sub>3</sub> <sup>−</sup> uptake system . . . . .	208
7.3.3. <i>Chlamydomonas</i> has a stromal vCA to capture CO <sub>2</sub> . . . . .	209
7.3.4. Stomal HCO <sub>3</sub> <sup>−</sup> is catalytically dehydrated to CO <sub>2</sub> inside thylakoid lumen . . . . .	210
7.3.5. The <i>Chlamydomonas</i> pyrenoid has a complex architecture . . . . .	210
7.3.6. Rubisco and EPYC1 condense into a bimolecular complex . . . . .	211
7.3.7. Rubisco is anchored to tubules and starch plates by proteins sharing a binding motif . . . . .	211
7.4. Introducing an aquatic CCM into crops could increase biomass production . . . . .	213
7.4.1. Proto-carboxysomes and proto-pyrenoids assemble in chloroplasts . . . . .	213
7.4.2. Cyanobacterial and algal inorganic carbon transporters can be targeted to the chloroplast envelope . . . . .	215
7.5. Conclusion . . . . .	215
7.6. References . . . . .	216
<b>Chapter 8. Environmental Variability and Its Control of Productivity . . . . .</b>	225
Alessandra NORICI, Caterina GEROTTO, John BEARDALL and John A. RAVEN	
8.1. Introduction . . . . .	225
8.2. Macro- and micronutrients in aquatic environments during Earth's history and their biological functions . . . . .	226
8.2.1. Nitrogen . . . . .	227
8.2.2. Phosphorus . . . . .	231
8.2.3. Sulfur . . . . .	233
8.2.4. Silicon . . . . .	235
8.2.5. Iron, copper, manganese, zinc, molybdenum, nickel . . . . .	237
8.3. The ultimate element limiting productivity and cell stoichiometry . . . . .	240
8.4. Light variability and effect on photosynthesis . . . . .	243
8.4.1. Light-harvesting and photosynthetic electron transport . . . . .	243
8.4.2. Photosynthesis versus irradiance (P vs. E) curves . . . . .	246
8.4.3. Aquatic ecosystems: temporal and depth variations of light . . . . .	247
8.4.4. Physiological processes associated with exposure to variable light intensities (acclimation and regulation of photosynthesis) . . . . .	248
8.5. Photosynthesis and primary production in the water column . . . . .	253
8.6. Glossary . . . . .	256
8.7. Acknowledgments . . . . .	257
8.8. References . . . . .	257

<b>Chapter 9. Future Responses of Marine Primary Producers to Environmental Changes . . . . .</b>	273
Kunshan GAO, Wenyan ZHAO and John BEARDALL	
9.1. Introduction . . . . .	273
9.2. Contemporary and future environmental changes . . . . .	274
9.2.1. Ocean acidification . . . . .	274
9.2.2. Ocean warming . . . . .	275
9.2.3. Ultraviolet radiation . . . . .	276
9.2.4. Ocean deoxygenation . . . . .	276
9.3. Effects of CO <sub>2</sub> rise and ocean acidification . . . . .	277
9.3.1. Effects of ocean warming and its combination with OA . . . . .	280
9.3.2. Effects of UV radiation and its combination with OA and warming . . . . .	282
9.4. Other interactions . . . . .	287
9.5. Summary . . . . .	288
9.6. Perspectives . . . . .	289
9.7. Acknowledgments . . . . .	290
9.8. References . . . . .	290
<b>List of Authors . . . . .</b>	305
<b>Index . . . . .</b>	309
