Foreword	ix
Chapter 1. Getting Things Moving	1
1.1. Introduction	2
1.2. Actuators	4
1.2.1. General information	4
1.2.2. Different types of actuator	8
1.2.3. Amplification	11
1.2.4. Other modes of action from mechanics	12
1.2.5. Remarkable properties	16
1.3. Actuators and 4D printing	26
1.3.1. General framework	27
1.3.2. Specificities linked to the manufacturing process	30
1.4. Stimulations of matter	60
1.4.1. Programmable matter	61
1.4.2. Materials for 4D printing	70
1.4.3. Activations by physical pathway	88
1.4.4. A transition to 4D printing: swimming robots	97
1.4.5. Current scientific offer and application specifications	103
1.4.6. Some constraints	105
1.5. And tomorrow?	112
1.6. References	114
Chapter 2. Energy Stimulation: The Abandoned Child?	159
2.1. Introduction	159
2.2. To go a little further	162
2.3. References	164

Chapter 3. Material-Process Duality in Industrial 4D Printing	167
3.1. Introduction.	167
3.2. From research to innovation	168
3.2.1. Research	169
3.2.2. Innovation	172
3.2.3. Inclusion of 4D printing in future projects	178
3.2.4. Weaknesses between research and profitable applications.	181
3.3. From matter to 4D form; from 4D form to function	184
3.3.1. General considerations.	189
3.3.2. Algorithms by/for 4D printing	190
3.3.3. Performing the material	193
3.4. References	194
Chapter 4. Design for 4D Printing	203
4.1. Introduction.	203
4.2. How can 4D printing in design be approached?	204
4.3. Opportunities and challenges in design: a strategic roadmap for research.	207
4.3.1. Evolution of technological solutions and associated challenges	207
4.3.2. Design for 4D printing.	209
4.3.3. Methodological framework for the design of energy-sensitive structures.	211
4.4. Capture and reuse of 4D printing knowledge	213
4.5. Functional design	218
4.5.1. Functional modeling and solution principles.	218
4.5.2. Smart material/stimulus selection and processing planning	219
4.6. From architectural design to detailed design	219
4.6.1. Definition of design spaces and CAD representations	220
4.6.2. Voxel-based modeling and simulation of active material behavior	221
4.6.3. Distribution of active materials.	224
4.6.4. Distribution of active materials by integrating empty elements	227
4.6.5. Additional scientific challenges	229
4.7. Digital chain for 4D design and prototyping	230
4.8. Claims and practical constraints.	231
4.9. Conclusion	232
4.10. References.	232

Conclusion	243
Appendix	281
Index	293
