Introduction	ix
Chapter 1. Semiconductor Theory	1
1.1. Introduction.	1
1.2. Review of the basic concepts of crystalline semiconductors	3
1.2.1. Intrinsic semiconductors.	4
1.2.2. Extrinsic semiconductors	5
1.2.3. Fermi level.	7
1.2.4. Charge transport in semiconductors	7
1.3. P–N junction	9
1.3.1. Space charge region	9
1.3.2. Junction capacitance	11
1.4. Impurities and defects.	11
1.4.1. Traps and recombination centers.	12
1.5. Metal/semiconductor contact	20
1.5.1. Parameters of metal/semiconductor contacts.	20
1.5.2. Formation of metal/semiconductor contacts	21
1.5.3. Width λ of the space charge region	23
1.5.4. Junction capacitance	23
1.5.5. Schottky effect	24
1.5.6. Schottky diode	25
1.6. Semiconductors under non-equilibrium conditions	27
1.6.1. Parameters of a semiconductor under non-equilibrium conditions	27
1.6.2. Recombination of carriers via recombination centers (Shockley–Read–Hall theory).	29
1.6.3. Transient relaxation current.	31

1.7. Space charge current	34
1.7.1. The case of an ideal semiconductor	35
1.7.2. Trap-filled limit voltage	37
1.7.3. Discrete traps and trap distribution	37
1.8. Hopping conduction.	38
Chapter 2. Materials	41
2.1. Introduction.	41
2.2. Organic materials	42
2.2.1. Binding and hybridization of carbon	46
2.3. Conjugated polymers	48
2.3.1. Polyacetylene	49
2.3.2. Benzene	51
2.3.3. Deposition of polymer films	52
2.4. Energy bands.	53
2.4.1. Concepts of solitons and polarons	55
2.4.2. Concept of doping	58
2.5. Small molecules	61
2.6. Design and engineering of organic materials	63
2.7. Hybrid materials or nanocomposites	65
2.7.1. Polymer matrix nanocomposites	67
2.7.2. Nanocomposites with nanomaterials	67
2.7.3. Preparation of nanocomposites	68
2.8. Transparent and conductive materials	73
2.8.1. Indium tin oxide.	73
2.8.2. Fluorine-doped tin oxide.	74
2.8.3. Other transparent oxide conductors	75
2.8.4. Other transparent conductive materials	75
2.9. Materials for encapsulation	78
2.9.1. Glass slides	78
2.9.2. Hybrid multilayers	79
Chapter 3. Optical Processes	81
3.1. Introduction.	81
3.2. Interaction between light and molecules	81
3.2.1. Electronic transitions.	81
3.2.2. Selection rules.	82
3.3. Optical processes	84
3.3.1. Light absorption.	84
3.3.2. Light emission.	88
3.3.3. Perrin–Jablonski diagram	91
3.3.4. Quenching	91

3.4. Excitons	99
3.4.1. Classification of excitons	100
3.4.2. Binding energy of excitons	101
3.4.3. Movement of excitons	103
3.4.4. Dissociation of excitons	103
3.5. Experimental techniques	104
3.5.1. UV–visible absorption spectroscopy	104
3.5.2. Photoluminescence spectroscopy	106
3.5.3. Infrared and Raman spectroscopy	110
Chapter 4. Electronic Processes	115
4.1. Introduction.	115
4.2. Charge carrier injection process.	116
4.2.1. Injection mechanisms	117
4.2.2. Hole or electron devices	119
4.2.3. Transport layers	121
4.3. Charge transport process	123
4.3.1. Hopping mechanisms	124
4.3.2. Space-charge limited conduction.	133
4.3.3. Defects and traps in organic semiconductors.	140
Chapter 5. Interface Processes	155
5.1. Introduction.	155
5.2. Formation of organic semiconductor/metal interfaces.	155
5.2.1. Vacuum-level alignment model: Mott–Schottky theory	156
5.2.2. Interface dipole model: Bardeen’s theory.	156
5.2.3. Characteristics of organic semiconductor/metal interfaces	158
5.2.4. Fermi-level pinning.	160
5.2.5. Integer charge transfer process	162
5.3. Surface characterization techniques	166
5.3.1. Atomic force microscopy	166
5.3.2. X-ray photoelectron spectroscopy	167
5.3.3. UV photoelectron spectroscopy	168
5.4. Interface engineering	169
5.4.1. Inverted structure devices	170
5.4.2. Self-assembled monolayers	172
5.5. Conclusion	174

List of Acronyms	175
