<b>Preface</b> . . . . .	ix
<b>Introduction</b> . . . . .	xi
<b>List of Notations</b> . . . . .	xix
<b>Chapter 1. Concepts of Gas–Liquid Flows</b> . . . . .	1
1.1. Introduction and basic concepts . . . . .	1
1.2. Gas–liquid flows. . . . .	2
1.2.1. The physics of two-phase flows . . . . .	3
1.2.2. Classification of flows . . . . .	16
1.2.3. Topologies of a heated vertical flow . . . . .	23
1.2.4. Calculation of fluxes . . . . .	27
1.3. Dispersed phase flows: mists and sprays . . . . .	35
1.3.1. Mist . . . . .	35
1.3.2. Spray generation . . . . .	37
1.3.3. Spray characterization: particle sizing . . . . .	38
1.3.4. Spray vaporization: the case of the isolated drop. . . . .	42
1.4. Several examples . . . . .	43
<b>Chapter 2. Convection of Species</b> . . . . .	63
2.1. Introduction . . . . .	63
2.2. Characterization of a mixture: definitions . . . . .	63
2.3. Law of diffusive transfer: Fick’s law. . . . .	64
2.4. Similarity of transport equations . . . . .	66
2.5. Solving the equations of diffusive transport. . . . .	69
2.5.1. Analogies . . . . .	69
2.5.2. Non-reactive boundary layer: concentration fixed at the wall. . . . .	71

---

2.5.3. Non-reactive boundary layer: wall catalysis . . . . .	73
2.5.4. Reactive boundary layer . . . . .	79
<b>Chapter 3. Phase Change Materials . . . . .</b>	<b>81</b>
3.1. Introduction . . . . .	81
3.2. PCM for cooling mechatronics devices . . . . .	84
3.2.1. Description of heat transfer and PCM behavior . . . . .	85
3.2.2. PCM behavior. . . . .	87
3.3. Numerical model. . . . .	88
3.3.1. Description of the 3D model. . . . .	88
3.3.2. Heat sink without PCMs . . . . .	90
3.3.3. Heat sink with PCMs . . . . .	91
3.4. Conclusion . . . . .	95
<b>Chapter 4. Electro-Thermo-Mechanical Modeling of Systems . . . . .</b>	<b>97</b>
4.1. Introduction . . . . .	97
4.2. Theory of electro-thermo-mechanical coupling. . . . .	98
4.2.1. Electro-thermal phenomena . . . . .	98
4.2.2. Numerical formulation of the electro-thermo-mechanical coupling . . . . .	100
4.3. Finite element simulation of the electro-thermo-mechanical behavior . . . . .	103
4.3.1. Strong coupling of the electro-thermo-mechanical modeling. . . . .	104
4.3.2. Weak coupling of the electro-thermo-mechanical modeling . . . . .	105
4.4. Example of electro-thermo-mechanical simulation of an HBT transistor. . . . .	105
4.4.1. Global model of HPA. . . . .	106
4.4.2. Local model of an HBT transistor. . . . .	110
4.5. Modal analysis of mechatronic components. . . . .	113
4.5.1. Writing the equation of the vibration problem . . . . .	113
4.5.2. Variational formulation. . . . .	115
4.5.3. Finite element approximation . . . . .	115
4.5.4. Resolution in the frequency domain. . . . .	117
4.6. Stochastic modal analysis of mechatronics components . . . . .	118
4.7. Numerical identification of the elastic parameters of electronic components . . . . .	119
4.8. Example of modeling and simulation of the vibratory behavior of mechatronic components. . . . .	120
4.9. Conclusion . . . . .	127

---

<b>Appendices</b> . . . . .	129
<b>Appendix 1. Physical Properties of Common Fluids.</b> . . . . .	131
<b>Appendix 2. Physical Properties of Common Solids</b> . . . . .	133
<b>Appendix 3. Thermodynamic Properties of Water Vapor.</b> . . . . .	137
<b>Appendix 4. Table of Functions: <math>erf(x)</math>, <math>erfc(x)</math> and <math>ierfc(x)</math>.</b> . . . . .	141
<b>References.</b> . . . . .	143
<b>Index.</b> . . . . .	151
