Preface	ix
Part 1.	1
Chapter 1. Introduction to Portfolio Optimization	3
1.1. Fundamentals of portfolio optimization	3
1.2. An example case study	11
1.2.1. Portfolio P: Unconstrained portfolio optimization	17
1.2.2. Portfolio P: Constrained portfolio optimization	20
1.2.3. Portfolio P: Sharpe Ratio-based portfolio optimization	22
1.3. MATLAB [®] demonstrations	25
Chapter 2. A Brief Primer on Metaheuristics	37
2.1. Metaheuristics framework	37
2.2. Exact methods versus metaheuristics	40
2.3. Population-based metaheuristics – Evolutionary Algorithms	43
2.3.1. Evolutionary Algorithm basics	45
2.4. Evolution Strategy	49
2.4.1. Evolution Strategy: genetic inheritance operators	49
2.4.2. Evolution Strategy process flow chart	52
2.4.3. Demonstration of Evolution Strategy	52
2.4.4. Experimental results and analysis	56
2.5. Differential Evolution strategy	59
2.5.1. Differential Evolution operators	59
2.5.2. Differential Evolution strategy process flow chart	61
2.5.3. Differential Evolution strategies	63
2.5.4. Demonstration of Differential Evolution Strategy	65
2.5.5. Experimental results and analysis	68
2.6. MATLAB [®] demonstrations	71

Part 2.	83
Chapter 3. Heuristic Portfolio Selection	85
3.1. Portfolio selection	85
3.2. Clustering	88
3.3. k -means clustering	91
3.4. Heuristic selection of securities	95
3.4.1. Heuristic portfolio selection for S&P BSE200	96
3.4.2. Heuristic portfolio selection for Nikkei225	99
3.5. k -portfolio performance	104
3.5.1. Equal Weighted k -portfolio construction	104
3.5.2. Inverse Volatility Weighted k -portfolio construction	105
3.5.3. Other k -portfolio characteristics	108
3.6. MATLAB [®] demonstrations	109
Chapter 4. Metaheuristic Risk-Budgeted Portfolio Optimization	117
4.1. Risk budgeting	117
4.2. Long-Short portfolio	120
4.3. Risk-Budgeted Portfolio Optimization model	121
4.3.1. Constraint handling	123
4.3.2. Transformed Risk-budgeted portfolio optimization model	125
4.4. Differential Evolution with Hall of Fame	126
4.5. Repair strategy for handling unbounded linear constraints	127
4.6. DE HOF-based Risk-budgeted portfolio optimization	132
4.7. Case study global portfolio: results and analyses	134
4.7.1. Finding the optimal Risk-budgeted portfolio using DE HOF	135
4.7.2. Consistency of performance of DE HOF	136
4.7.3. Convergence characteristics of DE HOF	137
4.8. MATLAB [®] demonstrations	140
Chapter 5. Heuristic Optimization of Equity Market Neutral Portfolios	151
5.1. Market neutral portfolio	151
5.2. Optimizing a naïve equity market neutral portfolio	154
5.3. Risk-budgeted equity market neutral portfolio	160
5.4. Metaheuristic risk-budgeted equity market neutral portfolios	165
5.4.1. Rand5/Dir4 strategy	165
5.4.2. Tournament selection	166
5.4.3. Constraint handling	168
5.5. Experimental results and analyses	172
5.6. MATLAB [®] demonstrations	176

Chapter 6. Metaheuristic 130-30 Portfolio Construction	191
6.1. 130-30 portfolio	191
6.2. 130-30 portfolio optimization: mathematical formulation	192
6.3. 130-30 portfolio optimization using MATLAB Financial Toolbox™	193
6.3.1. Experimental results	195
6.4. Metaheuristic 130-30 portfolio optimization	204
6.4.1. Transformation of 130-30 portfolio optimization model	204
6.4.2. Constraint handling	209
6.4.3. Differential Evolution-based 130-30 portfolio construction	218
6.4.4. Experimental results	220
6.5. MATLAB® demonstrations	222
Chapter 7. Metaheuristic Portfolio Rebalancing with Transaction Costs	239
7.1. Portfolio rebalancing	239
7.2. Portfolio rebalancing mathematical model	241
7.3. Evolution Strategy with Hall of Fame for Portfolio Rebalancing	244
7.3.1. Evolution Strategy – a brief note	244
7.3.2. Optimal rebalanced portfolio using ES HOF	245
7.3.3. Weight repair strategy for portfolio rebalancing	246
7.4. Experimental results	253
7.4.1. ES HOF-based rebalancing of a high risk S&P BSE200 portfolio .	253
7.4.2. Convergence characteristics of ES HOF	254
7.4.3. Consistency of performance of ES HOF	259
7.5.!Comparison of Non-Rebalanced and Rebalanced portfolios	259
7.5.1. Weight drift analysis for the Non-Rebalanced portfolio	260
7.5.2. Non-Rebalanced versus Rebalanced portfolios – which of these is better?	260
7.5.3. Risk-Return performance of the Rebalanced and Non-Rebalanced portfolios	263
7.6.!MATLAB® demonstrations	264
Conclusion	277
Bibliography	283
Index	289
