Foreword	xi
Preface	xv
Introduction	xxix
Part 1. From Spectacular Applications to the Economic Market of Additive Manufacturing	1
Introduction to Part 1	3
Chapter 1. Some Significant Examples	7
1.1. Introduction	8
1.2. Maritime, military, aerial and spatial applications	11
1.3. Conception: art and new domestic applicative niches	14
1.3.1. Art and additive manufacturing.	17
1.3.2. Archaeology, museum restoration, reproduction	19
1.3.3. Construction sector.	21
1.4. Mechanical parts	23
1.5. Land transport	28
1.6. The question of spare parts.	32
1.7. Toys for the young and the “not-so-young”	33
1.8. “Traditional” medical applications	34
1.9. Animation	39

1.10. Scientific applications	40
1.10.1. Optics	40
1.10.2. Chemical and process engineering	41
1.10.3. Complex structures	42
1.10.4. Toward the infinitely small	43
1.11. Nanometric origami	45
1.12. Conclusion	47
1.13. Bibliography	49
Chapter 2. Integration of Additive Manufacturing Technologies into Society	69
2.1. Introduction	70
2.2. Markets and application domains of 3D printing	72
2.2.1. Markets	72
2.2.2. Principal application niches	76
2.3. Growth dynamics	80
2.4. Studies on the dynamic of growth	84
2.4.1. Convergence	84
2.4.2. “Attractiveness” of additive manufacturing technologies	87
2.4.3. Possible positioning of the industry	132
2.5. Toward a certain stabilization: The dynamics of innovation	140
2.6. Conclusion	146
2.7. Bibliography	152
Part 2. 3D Processes	175
Introduction to Part 2	177
Chapter 3. Processes, Machines and Materials	181
3.1. Introduction	183
3.2. Stereolithography	188
3.2.1. History of 2D1/2 processes	188
3.2.2. Other techniques developed since 1984	191
3.2.3. Light–matter interaction and space-resolved polymerization	193
3.2.4. Consequences	197
3.2.5. Families of materials used	201
3.2.6. Layer implementation	207
3.2.7. Coupling of polymerized surface generation and volumetric reduction	207

3.3. Process of wire fusion	207
3.3.1. FDM or FFF materials.	211
3.3.2. Adhesion	212
3.3.3. Synthesis	214
3.4. Sheet or powder gluing process	215
3.4.1. Bi-material process (SDL).	215
3.4.2. Variant using powders: 3DP Process.	217
3.4.3. Process using a cross-linkable polymer (SIR, for “Soluble/Insoluble Reaction”).	218
3.4.4. Synthesis	223
3.5. Powder fusion/sintering	225
3.5.1. Materials	227
3.5.2. Energy sources	228
3.5.3. Physicochemical aspects and constraints linked to the process.	228
3.5.4. Simultaneous contribution of matter and energy	233
3.5.5. MPA process	235
3.5.6. Synthesis	236
3.6. Conclusion.	238
3.7. Bibliography.	245
Conclusion	265
Index	275
