Foreword	ix
Introduction	xi
Part 1. Network Variety and Modeling	1
Chapter 1. Network Typology	3
1.1. Introduction.	3
1.1.1. Network description levels	3
1.1.2. Network, graph and flow	4
1.1.3. Shared or dedicated infrastructure	5
1.1.4. User inclusion	6
1.2. The principal networks	6
1.2.1. (Human) transport networks	6
1.2.2. (Goods) distribution and collection networks	7
1.2.3. Dedicated distribution and collection networks (of fluids and energy)	8
1.2.4. IT networks	9
1.2.5. Communication networks	9
1.2.6. Social and digital social networks	10
1.3. Characterization and typology of networks	11
1.3.1. Key characteristics	11
1.3.2. Network integration	12
1.3.3. Typology	13
1.4. Engineering issues.	16

1.5. Performance indicators, evaluation, optimization	18
1.5.1. Performance indicators	18
1.5.2. Evaluation and optimization	20
1.6. Conclusion	23
Chapter 2. Modeling Discrete Flow Networks	25
2.1. Introduction.	25
2.2. Structure.	28
2.3. Characterization of a discrete flow	30
2.3.1. Statistical description	30
2.3.2. Probabilistic description	32
2.4. Activities	32
2.5. Control system	37
2.6. Resources	40
2.7. Fluid kinematics	41
2.7.1. Flow/resource/decision synchronization	42
2.7.2. Congestion phenomenon	48
2.7.3. Dissemination of information in social networks	51
2.8. Formalisms for modeling flows in a network	52
2.8.1. BPM tools	53
2.8.2. Timed Petri nets.	53
2.8.3. Flow networks.	54
2.8.4. Queuing networks	55
2.9. Multi-modeling	57
2.9.1. Multi-formalism versus mono-formalism.	57
2.9.2. The DEVS hierarchical model	60
2.9.3. Multi-layer networks	62
2.10. Conclusion	64
Part 2. Network Analysis Methods and Applications	67
Chapter 3. Exact Methods Applied to the Flow Analysis of Topological Networks	69
3.1. Introduction.	69
3.2. Additive flow networks – deterministic modeling by flow networks	71
3.2.1. Two-terminal series–parallel graph	72
3.2.2. General case – max-flow/min-cut	74
3.3. Additive flow networks – stochastic modeling by queuing networks	76

3.4. Synchronized flow networks – modeling by timed event graphs	81
3.4.1. Steady-state analysis of timed event graphs	81
3.4.2. Example of application: sizing a flow-shop	83
3.5. Conclusion	88
Chapter 4. Simulation Techniques Applied to the Analysis of Sociological Networks	91
4.1. Introduction.	91
4.2. Simulation techniques.	92
4.2.1. Discrete event simulation (worldviews).	94
4.2.2. DEVS formalism	96
4.2.3. Coupling simulation/resolutive methods	100
4.2.4. Distributed simulation	102
4.2.5. Architectural solutions.	103
4.2.6. Time management and synchronization.	104
4.2.7. Pessimistic approach	104
4.2.8. Optimistic approach	105
4.2.9. HLA.	106
4.2.10. Cosimulation.	107
4.2.11. FMI/FMU	108
4.2.12. FMI/FMU and HLA coupling.	109
4.3. Simulation of flows in sociological networks.	110
4.3.1. Behavioral simulation based on DEVS formalism	111
4.3.2. Application study	113
4.4. Conclusion	116
Part 3. Case Studies	119
Chapter 5. Smart Grid	121
5.1. Summary of the study.	122
5.2. Demand profile.	122
5.3. Solar power station, fuel station and regional import	123
5.4. Hydroelectric power station and PHES	123
5.5. Operational issues	124
5.6. Model	125
5.6.1. Decision variables	125
5.6.2. Constraints	126
5.6.3. Objective function	127
5.7. Optimization results.	128

Chapter 6. Forestry Logistics	131
6.1. Summary of the study	132
6.2. Forest timber supply problem	132
6.3. Tactical planning model	134
6.4. Logistics benchmarking	136
6.4.1. AS IS scenario (non-collaborative logistics)	136
6.4.2. TO BE scenario (collaborative logistics)	137
6.4.3. Results	138
6.5. Conclusion	139
Chapter 7. Multi-layered Digital Social Networks	143
7.1. Summary of the study	144
7.2. Digital social networks	144
7.3. Studying digital social networks via an interview broadcast	145
7.3.1. Pre-interview social network scenario	146
7.3.2. Social network audience	148
7.4. Modeling and simulation	148
7.4.1. Modeling the interview production and broadcast processes	148
7.4.2. MSN/HLA simulation architecture	149
7.5. Simulation results	152
7.6. Conclusion and perspectives	154
