<b>Preface</b> .....	xiii
Olivier CAVALIÉ, Emmanuel TROUVÉ, Avik BHATTACHARYA	
<b>Part 1. Theory, Principles and Methodology</b> .....	1
<b>Chapter 1. Relevant Past, On-going and Future Space Missions</b> ..	3
Philippe DURAND and Stephane MAY	
1.1. Some key parameters for space missions .....	3
1.1.1. Parameters for both SAR and optical missions .....	3
1.1.2. Parameters specific to SAR missions .....	6
1.1.3. Parameters specific to optical missions .....	9
1.2. Past and on-going SAR missions .....	13
1.2.1. ERS-1, ERS-2 and Envisat .....	14
1.2.2. Canadian C-band satellites: Radarsat-1, Radarsat-2 and RCM ..	15
1.2.3. Japanese L-band satellites: JERS-1, ALOS and ALOS-2 .....	17
1.2.4. SRTM and X-SAR .....	18
1.2.5. TerraSAR-X, TanDEM-X and PAZ .....	18
1.2.6. COSMO SkyMed constellations .....	19
1.2.7. SAOCOM1 .....	20
1.2.8. Sentinel-1 .....	20
1.2.9. ICEYE .....	21
1.3. Future SAR missions .....	22
1.3.1. TerraSAR-NG .....	22
1.3.2. ALOS-4 .....	22
1.3.3. NISAR .....	22

1.3.4. Biomass . . . . .	23
1.3.5. ROSE-L . . . . .	24
1.4. Optical imaging missions . . . . .	24
1.4.1. Past optical missions . . . . .	24
1.4.2. On-going optical missions . . . . .	27
1.4.3. Future optical missions . . . . .	33
1.5. Conclusion . . . . .	34
1.6. Acknowledgments . . . . .	35
1.7. References . . . . .	35
 <b>Chapter 2. Image Matching and Optical Sensors</b> . . . . .	37
Marc PIERROT DESEILLIGNY and Ewelina RUPNIK	
2.1. Introduction, definition and applications . . . . .	37
2.1.1. Problem definition . . . . .	37
2.1.2. Geometry of matching . . . . .	38
2.1.3. Radiometric and geometric hypothesis . . . . .	39
2.2. Template matching . . . . .	39
2.2.1. Matching as a similarity measure . . . . .	39
2.2.2. Basic template approach . . . . .	40
2.2.3. Normalized template approach . . . . .	40
2.3. Handling “large” deformations . . . . .	44
2.3.1. Introduction . . . . .	44
2.3.2. <i>A posteriori</i> filtering and regularization approach . . . . .	44
2.3.3. Multi-resolution approach . . . . .	47
2.4. Discrete nature of the image and sub-pixel matching . . . . .	48
2.5. Optical imaging sensors . . . . .	48
2.5.1. Sensor geometries . . . . .	48
2.5.2. Sensor orientation in 3D space . . . . .	49
2.6. Acknowledgments . . . . .	55
2.7. References . . . . .	55
 <b>Chapter 3. SAR Offset Tracking</b> . . . . .	59
Silvan LEINSS, Shiyi LI, Yajing YAN and Bas ALTENA	
3.1. Basics of SAR imaging . . . . .	59
3.1.1. Imaging geometry and resolution of SAR systems . . . . .	59
3.1.2. Radar speckle and speckle reduction with multi-looking . . . . .	63
3.1.3. Spectral support of the backscatter intensity . . . . .	66
3.1.4. Offsets due to radar penetration . . . . .	67
3.2. SAR offset tracking . . . . .	67
3.2.1. Cross-correlation . . . . .	67
3.2.2. SAR offset tracking using image pairs . . . . .	70

---

3.2.3. SAR offset tracking using image series . . . . .	73
3.2.4. Tracking from single and multiple orbits . . . . .	79
3.2.5. Summary . . . . .	82
3.3. Acknowledgments . . . . .	83
3.4. References . . . . .	83
<b>Chapter 4. SAR Interferometry: Principles and Processing . . . . .</b>	<b>89</b>
Philippe DURAND, Nadine POURTHIÉ, Céline TISON and Giorgio GOMBA	
4.1. Introduction . . . . .	89
4.2. Principle and limits of SAR interferometry . . . . .	90
4.2.1. Geometrical information . . . . .	91
4.2.2. How to choose an interferometric pair? . . . . .	95
4.2.3. Phase and coherence estimation . . . . .	97
4.2.4. Loss of coherency: several reasons . . . . .	99
4.2.5. Other InSAR limitations . . . . .	100
4.3. Atmospheric corrections . . . . .	101
4.3.1. Compensation for tropospheric delays . . . . .	101
4.3.2. Estimation of and compensation for ionospheric propagation delays	107
4.4. InSAR processing chains . . . . .	109
4.4.1. Main steps in InSAR processing . . . . .	109
4.4.2. Illustration of the DInSAR processing chain: a case study with DiapOTB . . . . .	112
4.4.3. Available InSAR software: a quick overview . . . . .	118
4.5. Conclusion . . . . .	119
4.6. Acknowledgments . . . . .	120
4.7. References . . . . .	120
<b>Chapter 5. Advanced Methods for Time-series InSAR . . . . .</b>	<b>125</b>
Dinh HO TONG MINH, Ramon HANSSEN, Marie-Pierre DOIN and Erwan PATHIER	
5.1. Introduction . . . . .	125
5.2. Background of time-series InSAR analysis . . . . .	127
5.3. A review . . . . .	128
5.3.1. Small baseline methods for time-series analysis . . . . .	128
5.3.2. From PS to PSDS . . . . .	130
5.4. The SBAS technique . . . . .	132
5.4.1. Principle and definition of a “small baseline” network of interferograms . . . . .	132
5.4.2. Multi-looking and filtering, atmospheric or DEM error corrections and unwrapping . . . . .	134
5.4.3. Reconstruction of the time series . . . . .	137

5.4.4. Source separation, atmosphere versus deformation . . . . .	139
5.5. The PSDS technique . . . . .	141
5.5.1. The PS algorithm . . . . .	141
5.5.2. PS selection . . . . .	142
5.5.3. DS selection . . . . .	143
5.5.4. Phase linking . . . . .	144
5.5.5. Tools supporting PS and PSDS processing . . . . .	145
5.6. Acknowledgments . . . . .	146
5.7. References . . . . .	146
 <b>Chapter 6. The Interferometric Phase: Unwrapping and Closure Phase</b> . . . . .	155
Béatrice PINEL-PUYSSÉGUR, Francesco DE ZAN and Johann CHAMPENOIS	
6.1. Introduction . . . . .	155
6.2. Phase unwrapping algorithms and limitation of phase unwrapping errors . . . . .	156
6.2.1. The problem of phase unwrapping and some prerequisites . . . . .	156
6.2.2. A short history of unwrapping methods in InSAR . . . . .	160
6.2.3. Residue-cut tree algorithm, variants and 3D generalization . . . . .	161
6.2.4. Least-squares method . . . . .	165
6.2.5. Network-based approaches . . . . .	166
6.2.6. Methods for correcting unwrapping errors . . . . .	172
6.2.7. Summary and comparison . . . . .	175
6.3. The (re)discovery of closure phases and their implications for SAR interferometry . . . . .	176
6.3.1. Introduction to closure phases . . . . .	176
6.3.2. Mathematical properties of closure phases . . . . .	178
6.3.3. Physical misclosures . . . . .	179
6.3.4. Implications for interferometric phase estimation . . . . .	184
6.4. Acknowledgments . . . . .	186
6.5. References . . . . .	186
 <b>Part 2. Applications for Surface Displacements</b> . . . . .	191
 <b>Chapter 7. Remote Sensing of the Earthquake Deformation Cycle</b> . . . . .	193
Mathilde MARCHANDON, Tim J. WRIGHT and James HOLLINGSWORTH	
7.1. Introduction . . . . .	193
7.2. What have we learned about faults from nearly three decades of tectonic InSAR? . . . . .	195
7.2.1. Coseismic deformation . . . . .	195

---

7.2.2. Inter-seismic deformation . . . . .	201
7.2.3. Post-seismic deformation and aseismic deformation transients . . . . .	205
7.3. Investigating earthquake surface ruptures with optical image correlation . . . . .	209
7.3.1. A history of the optical correlation technique in the study of earthquakes . . . . .	209
7.3.2. Measuring earthquake surface displacements from optical images: methodology . . . . .	211
7.3.3. Some examples of near-fault displacement fields from recent and historical earthquakes . . . . .	217
7.3.4. New insights from high-resolution near-fault displacement maps . . . . .	222
7.4. Conclusion . . . . .	229
7.5. Acknowledgments . . . . .	231
7.6. References . . . . .	231

**Chapter 8. Volcanology: The Crucial Contribution of Surface Displacement Measurements from Space for Understanding and Monitoring Volcanoes . . . . .** 247

Virginie PINEL, Fabien ALBINO, Grace BATÔ and Paul LUNDGREN

8.1. Introduction . . . . .	247
8.2. Origin of surface displacement and topographic changes in a volcano . . . . .	248
8.2.1. Typical deformations in a basaltic system . . . . .	251
8.2.2. Typical deformations in an andesitic stratovolcano . . . . .	251
8.3. Techniques used to measure displacements and topographic changes in volcanoes . . . . .	252
8.3.1. Pixel offset tracking . . . . .	254
8.3.2. Measurement by interferometry (phase difference) . . . . .	256
8.3.3. Measurement of topographic changes from differences in digital elevation models . . . . .	257
8.4. Main limitations of measurements obtained by remote sensing . . . . .	259
8.4.1. Temporal resolution . . . . .	259
8.4.2. Cloud cover (optical imagery) . . . . .	260
8.4.3. Atmospheric artifacts (radar imagery) . . . . .	260
8.5. Main contributions of spatial geodesy for monitoring and studying volcanoes . . . . .	261
8.5.1. The development of global and statistical studies . . . . .	261
8.5.2. Improving knowledge of the magma supply system . . . . .	261
8.5.3. Growth and stability of volcanic edifices . . . . .	262
8.6. Recent progress . . . . .	262
8.6.1. Integrating satellite imagery with field data . . . . .	262

8.6.2. Automating processing chains for real-time detection . . . . .	262
8.6.3. Integration of all satellite sources in multi-parameter studies . . . . .	264
8.7. Volcanic crisis management: the contribution of displacement measurements obtained using spatial imagery . . . . .	265
8.7.1. Piton de la Fournaise, Réunion: benefits of spatial imagery for a highly active, closely monitored volcano . . . . .	265
8.7.2. Mount Agung, Indonesia: using InSAR data in real time in a crisis management situation . . . . .	266
8.7.3. Taal, Philippines: innovative use of InSAR information in real time . . . . .	268
8.8. Conclusion . . . . .	270
8.9. Acknowledgments . . . . .	271
8.10. References . . . . .	271

**Chapter 9. Anthropogenic Activity: Monitoring Surface-Motion Consequences of Human Activities with Spaceborne InSAR . . . . .** 283  
Bénédicte FRUNEAU, Dinh HO TONG MINH and Daniel RAUCOULES

9.1. Introduction . . . . .	283
9.2. Characteristics of subsidence/uplift phenomena associated with human activity . . . . .	284
9.2.1. Underground activities . . . . .	284
9.2.2. Cavities . . . . .	285
9.2.3. Suitability of the interferometric SAR techniques . . . . .	286
9.2.4. Optimum SAR data properties for monitoring anthropogenic activities . . . . .	288
9.3. Application examples: urban underground activities . . . . .	289
9.3.1. Urban underground construction works . . . . .	289
9.3.2. Urban groundwater extraction . . . . .	291
9.4. Applications in mineral resources extractive activities . . . . .	299
9.4.1. Brine, oil and gas extraction/injection . . . . .	299
9.4.2. Mining activities . . . . .	304
9.5. Conclusion . . . . .	306
9.6. Acknowledgments . . . . .	307
9.7. References . . . . .	307

**Chapter 10. Measuring Kinematics of Slow-Moving Landslides from Satellite Images . . . . .** 315  
Pascal LACROIX, Benedetta DINI and Aya CHEAIB

10.1. Introduction . . . . .	315
10.2. Image correlation applied to satellite optical images . . . . .	317

---

10.2.1. Landslide detection with optical remote sensing . . . . .	320
10.2.2. Landslide characterization with optical remote sensing . . . . .	321
10.2.3. Landslide monitoring with optical remote sensing . . . . .	322
10.3. Offset tracking of SAR images applied to landslides . . . . .	323
10.4. InSAR for landslide studies . . . . .	325
10.4.1. Standard versus multi-temporal InSAR analyses . . . . .	326
10.4.2. Limitations in the use of SAR interferometry for landslide applications . . . . .	328
10.4.3. Landslide detection with InSAR . . . . .	329
10.4.4. Landslide characterization with InSAR . . . . .	330
10.4.5. Landslide monitoring with InSAR . . . . .	330
10.5. Conclusion . . . . .	332
10.6. References . . . . .	333
<b>Chapter 11. Remote Sensing of Glacier Motion . . . . .</b>	<b>339</b>
Amaury DEHECQ, Bas ALTENA, Alex S. GARDNER, Emmanuel TROUVÉ and Silvan LEINSS	
11.1. Introduction . . . . .	339
11.2. What is glacier motion? . . . . .	341
11.2.1. Physical basis of ice flow . . . . .	341
11.2.2. Scales and processes of displacement in glaciology . . . . .	342
11.3. Measuring glacier displacement from satellite data . . . . .	343
11.3.1. Image preprocessing . . . . .	344
11.3.2. Offset-tracking algorithms . . . . .	345
11.3.3. InSAR . . . . .	348
11.3.4. Filtering and corrections of displacement fields . . . . .	351
11.3.5. Working with time series . . . . .	354
11.3.6. Summary of benefits and drawbacks of the different methods . . . . .	357
11.4. What can we learn from glacier displacement? . . . . .	357
11.4.1. From a topological perspective . . . . .	358
11.4.2. From a climatological perspective . . . . .	358
11.4.3. From a mechanical perspective . . . . .	358
11.4.4. From a hydrological perspective . . . . .	359
11.4.5. From a geomorphological perspective . . . . .	360
11.4.6. From a hazards perspective . . . . .	360
11.5. Perspectives and future directions . . . . .	360
11.5.1. What will we learn from future missions? . . . . .	360
11.5.2. What future sensors are needed for glaciology? . . . . .	362
11.6. Acknowledgments . . . . .	363
11.7. References . . . . .	363

<b>Chapter 12. New Applications of Spaceborne Optical Image Cross-Correlation: Digital Elevation Models of Volcanic Clouds and Shallow Bathymetry from Space . . . . .</b>	373
Marcello DE MICHELE and Daniel RAUCOULES	
12.1. Introduction . . . . .	373
12.1.1. General introduction . . . . .	373
12.2. Digital elevation models of volcanic ash clouds . . . . .	374
12.2.1. Introduction: can we precisely measure the height of a volcanic ash cloud and what physical process controls the injection height and the speed of a volcanic ash plume? . . . . .	374
12.2.2. Principles . . . . .	375
12.2.3. Applications . . . . .	379
12.3. Shallow bathymetry: measuring wave characteristics from space . . . . .	383
12.3.1. Introduction: can we map tectonic fault motion under shallow water and can we measure differential bathymetry? . . . . .	383
12.3.2. Principles . . . . .	383
12.3.3. Applications . . . . .	387
12.4. Concluding remarks . . . . .	389
12.5. Acknowledgments . . . . .	389
12.6. References . . . . .	389
<b>List of Authors . . . . .</b>	393
<b>Index . . . . .</b>	397
