Introduction ix

Table of Notations xiii

Chapter 1. Fundamental Principle of Dynamics 1

1.1. The fundamental principle of dynamics and its scalar consequences 1
1.1.1. Fundamental principle of dynamics 1
1.1.2. Choosing a frame 2
1.1.3. Preferred time scale 5
1.2. Secondary principles 7
1.2.1. First secondary principle of the separation of effects 7
1.2.2. Second secondary principle of effort generators 8
1.2.3. Third secondary principle of effort receivers 8
1.3. Motion of a set ($\mathscr{D}$) in a given frame $\langle\lambda\rangle$ 9
1.3.1. Presentation of the context 9
1.3.2. Combination of accelerations 10
1.3.3. Coriolis inertial torsor 10
1.3.4. Drive inertial torsor 11
1.3.5. Relation between the dynamic torsors in the two frames 12
1.3.6. Applying the fundamental principle 13
1.4. Motion of a non-deformable solid in a given frame 14
1.4.1. Coriolis inertial torsor 14
1.4.2. Drive inertial torsor 16

Chapter 2. Solid in Space. Efforts and Links: Power 19

2.1. Degrees of freedom of a solid 19
2.2. Free solid 20
2.2.1. Velocity distributing torsor 20
2.2.2. Kinetic torsor 21
2.2.3. Dynamic torsor 21
2.2.4. Kinetic energy 22
2.2.5. Applying the fundamental principle of dynamics 22
2.3. Linked solids and links 23
2.3.1. Links 23
2.3.2. Configurable links 24
2.3.3. Linked solids. 25
2.4. Virtual power developed on a material set ($\mathscr{D}$) 28
2.5. Power of the efforts exerted on a solid 30
2.5.1. Definition. 30
2.5.2. Discrete force field 30
2.5.3. Non-deformable mechanical set 31
2.5.4. Continuous mechanical set 31
2.6. Properties of power 32
2.6.1. Powers developed in two distinct frames 32
2.6.2. Case of a system of forces equivalent to zero acting on a solid 32
2.6.3. Case of a system of forces equivalent to zero acting on a deformable mechanical set 33
2.6.4. Partial powers 34

Chapter 3. Scalar Consequences and Movement Equations 35

3.1. Establishment principle of the movement equations 35
3.1.1. Vector projection 36
3.1.2. Torsor products 37
3.1.3. Choice of representative scalar consequences 38
3.2. Movement equations of a solid 39
3.2.1. Scalar consequences via vector projection 39
3.2.2. Scalar consequences of the analytic mechanics of motion 57
3.2.3. Linear independence of torsors 58
3.2.4. Exercise 3 – Scalar consequences using analytical mechanics 60
3.3. Movement equations of the free solid 72

3.4. Movement equations of the linked solid with configurable links . . . 75
3.4.1. Velocity distributing torsor and partial distributing torsors. . . . 75
3.4.2. Case of configurable links independent of time. . . . 76
3.4.3. Case of configurable links dependent on time. . . . 77
3.4.4. Perfect configurable links . . . 78
3.5. Energetic expression of the equations of analytical mechanics . . . 78
3.5.1. Case of configurable links explicitly independent of time . . . 78
3.5.2. Case of configurable links explicitly dependent on time . . . 79
3.6. Summary example . . . 81
3.6.1. Locating the solid . . . 81
3.6.2. Links . . . 83
3.6.3. Solid kinematics . . . 83
3.6.4. Kinetics of the solid . . . 85

Chapter 4. Particular Applications . . . 97

4.1. Simulation of the motion of Earth . . . 97
4.1.1. Application of the fundamental principle . . . 97
4.1.2. Theorem of dynamic moment at G . . . 99
4.1.3. Theorem of dynamic resultant . . . 108
4.2. Foucault's pendulum . . . 114
4.2.1. Observation of the phenomenon. . . . 114
4.2.2. Analyzing the phenomenon . . . 116

Chapter 5. Methodological Formulary. . . . 127

5.1. Reference outline on the motion of a solid . . . 127
5.1.1. Representation of a frame . . . 127
5.1.2. Reference frame . . . 129
5.1.3. Situation of the solid . . . 130
5.1.4. Notion of basis in a frame . . . 133
5.2. Kinematics of the solid . . . 133
5.2.1. Kinematics of a material point M . . . 134
5.2.2. Kinematics of non-deformable solids. . . . 139
5.3. Principle of motion with fixed plane. . . . 142
5.3.1. Kinematics of a solid . . . 142

5.3.2. Fixed and mobile centroids in a motion with fixed plane 143
5.4. Combination of motions 145
5.4.1. Combination of velocities 145
5.4.2. Combination of accelerations 147
5.5. Kinetics of non-deformable solids 148
5.5.1. Center of measure 148
5.5.2. Linear momentum and kinetic torsor 149
5.5.3. Dynamic torsor 153
5.5.4. Kinetic energy 155
