

## Table of Contents

<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Theoretical Tools and Materials for Electric Machines</b> . . . . .	1
Abderrezak REZZOUG and Mohammed El-Hadi ZAÏM	
1.1. Theoretical tools . . . . .	1
1.1.1. Electromagnetism and rotating machines . . . . .	1
1.1.2. Mechanics of rotating machines . . . . .	9
1.1.3. Heat exchanges in rotating machines . . . . .	11
1.2. Materials . . . . .	16
1.2.1. Insulators . . . . .	17
1.2.2. Conductors . . . . .	22
1.2.3. Magnetic materials . . . . .	25
1.3. Bibliography . . . . .	35
<b>Chapter 2. Low-speed Teeth Coupling Machines</b> . . . . .	39
Daniel MATT, Abdel Mounaïm TOUNZI and Mohammed El-Hadi ZAÏM	
2.1. Introduction . . . . .	39
2.2. Positioning of the problem. Outline of the feasibility limits . . . . .	41
2.2.1. Definition . . . . .	41

2.2.2. Mass or volume performances of electric machines . . . . .	43
2.2.3. Influence of the electromechanical conversion frequency. . . . .	44
2.2.4. Density of electromagnetic force . . . . .	51
2.2.5. Limit values of mass torque . . . . .	58
2.2.6. Comparison with the use of a gear motor . . . . .	61
2.3. Teeth coil winding and toothed pole machines . . . . .	63
2.3.1. Teeth coil winding VRM . . . . .	63
2.3.2. Toothed pole VRM . . . . .	67
2.3.3. Excited toothed poles machines . . . . .	71
2.4. Machines with distributed winding and the Vernier effect . . . . .	82
2.4.1. Variable reluctance machine. . . . .	82
2.4.2. Permanent magnets Vernier machine . . . . .	103
2.5. Bibliography. . . . .	112
<b>Chapter 3. High-speed Electric Machines . . . . .</b>	<b>117</b>
Mohammed El-Hadi ZAïM, Hamid Ben AHMED and Nicolas BERNARD	
3.1. Interest in high-speed rotational operating . . . . .	117
3.2. Criteria and constraints of a high-speed machine . . . . .	121
3.2.1. Mechanical performance. . . . .	121
3.2.2. Magnetic losses . . . . .	126
3.2.3. Aerodynamic losses . . . . .	133
3.2.4. Guidance system . . . . .	135
3.2.5. Consequences and performance limits . . . . .	139
3.3. Types of electric machines . . . . .	142
3.3.1. Induction machine . . . . .	142
3.3.2. Synchronous machines . . . . .	144
3.3.3. Doubly-salient variable reluctance machine (DSVRM) . . . . .	151
3.4. Examples of applications . . . . .	152
3.4.1. High-speed machining (HSM) . . . . .	153

3.4.2. Pumping and compression at very high speed . . . . .	158
3.4.3. Kinetic energy storage . . . . .	160
3.5. Methodology of high-speed machine optimization . . . . .	169
3.5.1. Modeling . . . . .	169
3.5.2. Optimization . . . . .	175
3.5.3. Conclusion on the maximization of volumic power . . . . .	184
3.6. Bibliography . . . . .	184
<b>Chapter 4. Superconducting Machines . . . . .</b>	<b>191</b>
Abderrezak REZZOUG, Jean LÉVÊQUE and Bruno DOUINE	
4.1. Introduction . . . . .	191
4.2. Superconducting materials in electrotechnology. . . . .	192
4.2.1. Superconductivity . . . . .	193
4.2.2. Critical quantities . . . . .	194
4.3. Superconducting materials used in electric machines . . . . .	201
4.3.1. LTS superconductors . . . . .	202
4.3.2. HTS superconductors . . . . .	204
4.4. Losses in the self-field of superconductors . . . . .	212
4.4.1. Origin of losses and the Bean model . . . . .	213
4.4.2. Assessment of losses . . . . .	214
4.5. Cryogenic environment . . . . .	216
4.5.1. Mechanical properties of materials at low temperature . . . . .	216
4.5.2. Cryogenic fluids . . . . .	219
4.5.3. Getting low temperature . . . . .	223
4.5.4. Cryostat . . . . .	230
4.5.5. Vacuum techniques . . . . .	234
4.6. Superconducting machines. . . . .	235
4.6.1. Synchronous machine with a superconducting field system . . . . .	237
4.6.2. Homopolar motor . . . . .	242

4.6.3. Superconducting screen motor. . . . .	245
4.6.4. Flux barrier motor . . . . .	246
4.6.5. Hysteresis motor . . . . .	247
4.6.6. Cold magnet motor. . . . .	249
4.7. Bibliography. . . . .	250
<b>List of Authors</b> . . . . .	<b>257</b>
<b>Index</b> . . . . .	<b>259</b>
