

## Table of Contents

<b>Foreword . . . . .</b>	<b>xi</b>
<b>Chapter 1. General Features . . . . .</b>	<b>1</b>
Bernard MICHaux	
1.1. Definitions . . . . .	1
1.1.1. Sensors . . . . .	1
1.1.2. Qualities of measuring sensors . . . . .	2
1.1.3. Chemical and biochemical sensors. . . . .	5
1.2. Classification . . . . .	6
1.2.1. Mass variation . . . . .	6
1.2.2. Optics . . . . .	7
1.2.3. Electrical parameters . . . . .	8
1.3. Specific problems of chemical sensors. . . . .	14
1.3.1. pH measurement: Nernst equation for the glass electrode . . . . .	14
1.3.2. Ionometry . . . . .	18
1.3.3. Conclusion concerning chemical sensors . . . . .	20
1.4. Advantages and drawbacks of chemical microsensors . . . . .	21
1.5. Perspectives . . . . .	22
1.6. Bibliography . . . . .	23
<b>Chapter 2. Chemical Sensors: Development and Industrial Requirements . . . . .</b>	<b>25</b>
Jacques FOULETIER and Pierre FABRY, based on discussions with Jacques FOMBON	
2.1. Introduction . . . . .	25
2.1.1. Overview of the various types of chemical sensors . . . . .	25
2.1.2. General trends . . . . .	26

2.2. Modern research and development (R&D) management methods applied to sensors . . . . .	26
2.2.1. Preliminary phases in the industrialization of a new sensor . . . . .	26
2.2.2. Development and industrialization. . . . .	31
2.2.3. Information and establishment of the commercial network . . . . .	32
2.3. Applications and inventory of the needs. . . . .	33
2.3.1. pH sensors . . . . .	33
2.3.2. Potentiometric selective electrodes . . . . .	33
2.3.3. Amperometric specific electrodes . . . . .	36
2.3.4. Conductimetric sensors . . . . .	36
2.3.5. Biosensors . . . . .	36
2.3.6. Biomedical applications . . . . .	37
2.4. New needs and industrial applications . . . . .	37
2.4.1. Creation of new sensors . . . . .	38
2.4.2. Reliability and absence of maintenance. . . . .	38
2.4.3. Miniaturization and robustness. . . . .	38
2.4.4. Lowering the production and use costs . . . . .	39
2.5. The sensor in the measuring chain . . . . .	39
2.5.1. General features. . . . .	39
2.5.2. Quality and metrology of the standards and of the instruments . . . . .	40
2.6. Conclusions and prospects . . . . .	43
2.7. Bibliography . . . . .	43
<b>Chapter 3. Sensitivity and Selectivity of Electrochemical Sensors . . . . .</b>	<b>45</b>
Pierre FABRY and Jean-Claude MOUTET, and translated by J.C. POIGNET and Pierre FABRY	
3.1. General concepts. . . . .	45
3.1.1. Various kinds of electrochemical sensors. . . . .	46
3.1.2. Interference and selectivity . . . . .	49
3.1.3. Nature and shape of materials . . . . .	50
3.2. Models for the sensitivity and selectivity of potentiometric sensors . . . . .	51
3.2.1. Basic concepts. . . . .	51
3.2.2. Ionic conducting membranes of the first kind . . . . .	55
3.2.3. Ionic conducting membranes of the second kind . . . . .	59
3.2.4. Liquid and organic membranes. . . . .	63
3.3. Case of amperometric sensors . . . . .	64
3.3.1. Principle of sensitivity . . . . .	64
3.3.2. Selectivity model . . . . .	65
3.4. Molecular recognition and sensors . . . . .	68
3.5. Characterization methods . . . . .	70
3.5.1. Definition and determination of the detection limit . . . . .	70

3.5.2. Determination methods of selectivity coefficients . . . . .	73
3.6. Bibliography . . . . .	77
<b>Chapter 4. Potentiometric Sensors (Ions and Dissolved Gases) . . . . .</b>	81
Annie PRADEL and Eric SAINT-AMAN	
4.1. Introduction . . . . .	81
4.1.1. General features . . . . .	81
4.1.2. Electrode potential . . . . .	82
4.1.3. Sensitivity of the potentiometric sensors . . . . .	85
4.1.4. Selectivity of the potentiometric sensors . . . . .	87
4.2. Membranes . . . . .	88
4.2.1. General features . . . . .	88
4.2.2. Glass membranes . . . . .	89
4.2.3. Crystallized inorganic membranes . . . . .	95
4.2.4. Polymeric membranes . . . . .	97
4.3. Current developments in potentiometric sensors . . . . .	99
4.3.1. All-solid-state sensors . . . . .	99
4.3.2. All-solid-state microsensors . . . . .	105
4.4. Bibliography . . . . .	109
<b>Chapter 5. Amperometric Sensors . . . . .</b>	115
Alain WALCARIUS, Chantal GONDREAN and Serge COSNIER	
5.1. Sensors based upon chemically modified electrodes . . . . .	115
5.1.1. Introduction . . . . .	115
5.1.2. Fabrication and characterization . . . . .	119
5.1.3. Fundamental principles and examples of application . . . . .	127
5.2. Amperometric biosensors . . . . .	138
5.2.1. Introduction . . . . .	138
5.2.2. Immobilization of biomolecules . . . . .	140
5.2.3. Amperometric biosensors, principle and description . . . . .	142
5.3. Bibliography . . . . .	160
<b>Chapter 6. ISFET, BioFET Sensors . . . . .</b>	173
Nicole JAFFREZIC-RENAULT and Claude MARTELET, translated by Claude MARTELET	
6.1. Structure of ISFET sensors . . . . .	173
6.1.1. Introduction . . . . .	173
6.1.2. MOS (metal-oxide semiconductor) structure . . . . .	174
6.1.3. EOS (electrolyte-oxide semiconductor) structure . . . . .	177
6.1.4. MOSFET . . . . .	178
6.1.5. ISFET . . . . .	179
6.2. Techniques used for ISFET fabrication and operation . . . . .	180

6.2.1. ISFET fabrication . . . . .	180
6.2.2. ISFET Measurement set-up . . . . .	182
6.3. ISFET membranes . . . . .	183
6.3.1. Detection of H <sup>+</sup> ions . . . . .	183
6.3.2. Detection of other ions . . . . .	184
6.4. Detection of molecular species . . . . .	187
6.4.1. Metabolic biosensors . . . . .	187
6.4.2. The enzymatic field-effect transistor (ENFET) principle . . . . .	188
6.4.3. Some ENFET examples . . . . .	189
6.4.4. ENFET and inhibition mechanisms . . . . .	192
6.5. BioFETs . . . . .	193
6.5.1. Systems based on affinity mechanisms . . . . .	193
6.5.2. BioFET based on cells and living organisms . . . . .	195
6.6. Commercial devices . . . . .	197
6.6.1. pH ISFETs . . . . .	197
6.6.2. Multidetection systems . . . . .	200
6.7. Conclusion and perspectives . . . . .	201
6.8. Bibliography . . . . .	202
<b>Chapter 7. Biosensors and Chemical Sensors Based Upon Guided Optics . . . . .</b>	<b>209</b>
Jean-Pierre GOURE and Loïc BLUM	
7.1. Introduction . . . . .	209
7.2. Definitions . . . . .	210
7.2.1. Luminous wave . . . . .	210
7.2.2. Optical fibers . . . . .	211
7.2.3. Planar guides . . . . .	212
7.3. Principles of optical microsensors . . . . .	213
7.3.1. Definition . . . . .	213
7.3.2. Modulation of the optical signal . . . . .	214
7.3.3. Techniques . . . . .	218
7.3.4. Refractometry . . . . .	219
7.4. Optical fiber biosensors . . . . .	220
7.4.1. Configurations of optical fiber biosensors . . . . .	221
7.4.2. Chemical sensors integrated in optical fiber sensors . . . . .	221
7.4.3. Optical fiber enzymatic biosensors . . . . .	223
7.4.4. Biosensors with non-catalytic bioreceptors (affinity biosensors) . . . . .	225
7.4.5. Chemiluminescence and bioluminescence detection sensors . . . . .	227
7.5. Perspectives and conclusions . . . . .	229
7.6. Bibliography . . . . .	229

<b>Chapter 8. Sensors and Voltammetric Probes for <i>In Situ</i> Monitoring of Trace Elements in Aquatic Media . . . . .</b>	233
Marie-Louise TERCIER-WAEBER and Jacques BUFFLE	
8.1. Introduction . . . . .	233
8.2. Basic principles of the voltammetric techniques and of their applications to analysis of water . . . . .	235
8.2.1. Components and principles . . . . .	235
8.2.2. Influence of the transport properties of the electroactive species on the voltammetric signal . . . . .	239
8.2.3. Influence of the speciation of the electroactive compounds on the voltammograms . . . . .	241
8.3. Voltammetric techniques used for the analysis of trace elements in waters . . . . .	244
8.3.1. Sensitivity limit of the voltammetric techniques . . . . .	244
8.3.2. Various voltammetric techniques . . . . .	245
8.3.3. Voltammetric determinations of natural samples in the laboratory or on the field . . . . .	245
8.4. Development of reliable submersible voltammetric probes . . . . .	247
8.4.1. Working electrodes . . . . .	247
8.4.2. Reference electrodes . . . . .	252
8.4.3. Voltammetric cells . . . . .	255
8.4.4. Interference due to the dissolved oxygen . . . . .	257
8.4.5. Interferences due to the adsorption of organic and inorganic compounds . . . . .	259
8.4.6. Gel-integrated microsensors . . . . .	260
8.5. Submersible voltammetric probes reported in the literature . . . . .	264
8.5.1. Continuous-flow probe based on a microelectrode and a pre-treatment of the sample . . . . .	264
8.5.2. Continuous-flow probe based on a macro- or a microelectrode with no sample treatment . . . . .	264
8.5.3. Probes based on direct immersion of the electrodes . . . . .	265
8.5.4. Continuous-flow probe based on a gel-integrated microsensor with no sample pretreatment: the VIP system . . . . .	267
8.6. Conclusion . . . . .	273
8.6.1. Calibration of voltammetric procedures . . . . .	274
8.6.2. Development of robust and reliable sensors and probes . . . . .	275
8.7. Bibliography . . . . .	275
<b>Chapter 9. Chemometrics . . . . .</b>	287
Philippe BREUIL	
9.1. Introduction . . . . .	287
9.1.1. The Problem of multivariate analysis . . . . .	288

9.1.2. Example: Beer-Lambert law of light absorption. . . . .	289
9.1.3. General method . . . . .	290
9.2. A particular case: the linear case . . . . .	290
9.2.1. Notations and preliminary considerations . . . . .	290
9.2.2. Simple least square methods . . . . .	291
9.2.3. Factor analysis . . . . .	296
9.3. Least squares methods: non-linear case . . . . .	302
9.3.1. Case when transformations can reduce the problem to linear functions . . . . .	302
9.3.2. PLS can model non-linear phenomena . . . . .	303
9.4. Neural networks . . . . .	303
9.4.1. General structure of the network . . . . .	304
9.4.2. Learning (i.e. calibration) . . . . .	304
9.4.3. Prediction . . . . .	305
9.5. Conclusion . . . . .	305
9.6. Bibliography . . . . .	306
<b>Chapter 10. Impedancemetric Sensors . . . . .</b>	<b>307</b>
Jacques FOULETIER and Pierre FABRY	
10.1. Introduction . . . . .	307
10.2. Fields of application . . . . .	307
10.3. Conductivity of liquid media. . . . .	310
10.3.1. Theoretical basis. . . . .	310
10.3.2. Effect of temperature . . . . .	312
10.4. Impedance of first kind cell (direct measurement) . . . . .	313
10.5. Cell configurations and sources of error . . . . .	317
10.5.1. Types of conductivity cells . . . . .	317
10.5.2. Characteristics – specifications . . . . .	321
10.6. Second kind cells. . . . .	326
10.7. Summary of practical precautions. . . . .	328
10.8. Bibliography . . . . .	329
<b>List of Authors . . . . .</b>	<b>331</b>
<b>Index . . . . .</b>	<b>335</b>
