

## Table of Contents

<b>Foreword</b> . . . . .	xi
Jörge DE SOUSA NORONHA	
<b>Introduction</b> . . . . .	xvii
Michel BRILLOUËT	
<b>Chapter 1. Photolithography</b> . . . . .	1
Philippe BANDELIER, Anne-Laure CHARLEY and Alexandre LAGRANGE	
1.1. Introduction . . . . .	1
1.2. Principles and technology of scanners . . . . .	3
1.2.1. Illumination . . . . .	3
1.2.2. The mask or reticle . . . . .	4
1.2.3. Projection optics . . . . .	5
1.2.4. Repeated projection and scanning projection . . . . .	7
1.3. Lithography processes . . . . .	8
1.3.1. Anti-reflective coating . . . . .	9
1.3.2. Resists . . . . .	10
1.3.3. Barrier layers or “top coating” . . . . .	12
1.4. Immersion photolithography . . . . .	12
1.4.1. Immersion lithography . . . . .	12
1.4.2. Resolution improvement . . . . .	13
1.4.3. Relevance of immersion lithography . . . . .	15
1.4.4. Immersion liquids . . . . .	16
1.4.5. Immersion scanners . . . . .	19
1.4.6. Immersion specific constraints and issues . . . . .	22
1.5. Image formation . . . . .	25
1.6. Lithography performances enhancement techniques . . . . .	27
1.6.1. Off axis illumination (OAI) . . . . .	28

1.6.2. Optical proximity corrections (OPC) . . . . .	29
1.6.3. Phase shift masks (PSM) . . . . .	30
1.7. Contrast . . . . .	31
1.7.1. Polarized light contrast. . . . .	31
1.7.2. Influence of contrast on roughness. . . . .	34
1.8. Bibliography . . . . .	38
<b>Chapter 2. Extreme Ultraviolet Lithography</b> . . . . .	<b>41</b>
Maxime BESACIER, Christophe CONSTANCIAS and Jean-Yves ROBIC	
2.1. Introduction to extreme ultraviolet lithography. . . . .	41
2.1.1. Chapter introduction . . . . .	41
2.1.2. Extreme ultraviolet lithography: the successor of optical lithography at 248 nm and 193 nm wavelengths . . . . .	42
2.1.3. The spectral range of extreme ultraviolet. . . . .	44
2.1.4. Choice of wavelength and resolution limit for EUV lithography . . . . .	44
2.2. The electromagnetic properties of materials and the complex index . . . . .	46
2.2.1. Wave vector and complex index . . . . .	47
2.2.2. Scattering and absorption: the electromagnetic origin of the refractive index . . . . .	48
2.2.3. Light propagation and refractive index . . . . .	53
2.2.4. Reflection and transmission of a monochromatic wave . . . . .	57
2.3. Reflective optical elements for EUV lithography . . . . .	61
2.3.1. The interferential mirror principle: Bragg structure. . . . .	61
2.3.2. Reflective optics: conception and fabrication . . . . .	63
2.3.3. Projection optics for EUV lithography . . . . .	70
2.4. Reflective masks for EUV lithography. . . . .	72
2.4.1. Different mask types . . . . .	72
2.4.2. Manufacturing processes for EUV masks . . . . .	76
2.4.3. Mask defectivity . . . . .	78
2.5. Modeling and simulation for EUV lithography. . . . .	79
2.5.1. Simulation, a conceptional tool. . . . .	79
2.5.2. Simulation methods . . . . .	82
2.6. EUV lithography sources. . . . .	90
2.6.1. Constitutive elements of a plasma source. . . . .	90
2.6.2. Specifications for an EUV source . . . . .	91
2.6.3. EUV sources. . . . .	92
2.7. Conclusion . . . . .	95
2.8. Appendix: Kramers–Krönig relationship . . . . .	96
2.9. Bibliography . . . . .	97

<b>Chapter 3. Electron Beam Lithography</b> . . . . .	101
Christophe CONSTANCIAS, Stefan LANDIS, Serdar MANAKLI, Luc MARTIN, Laurent PAIN and David RIO	
3.1. Introduction. . . . .	101
3.2. Different equipment, its operation and limits: current and future solutions . . . . .	106
3.2.1. Gaussian beam . . . . .	106
3.2.2. Shaped electron beam . . . . .	106
3.2.3. Multi-electron beam . . . . .	109
3.3. Maskless photolithography. . . . .	109
3.3.1. Optical lithography without a mask . . . . .	109
3.3.2. Charged particle maskless lithography . . . . .	110
3.4. Alignment. . . . .	118
3.5. Electron-sensitive resists . . . . .	120
3.6. Electron–matter interaction . . . . .	121
3.7. Physical effect of electronic bombardment in the target . . . . .	123
3.7.1. Polymerizing, chemical bond breaking . . . . .	123
3.7.2. Thermal effect. . . . .	124
3.7.3. Electrical effect . . . . .	124
3.8. Physical limitations of e-beam lithography . . . . .	125
3.8.1. Fundamental limit of electrons . . . . .	126
3.8.2. Resist-related limitations . . . . .	127
3.8.3. Limitations linked to tooling and electronic optics . . . . .	129
3.8.4. Diameter of the crossover . . . . .	130
3.8.5. Optical geometrical aberrations . . . . .	132
3.8.6. Chromatic aberrations . . . . .	133
3.8.7. Space charge aberration . . . . .	134
3.9. Electrons energy loss mechanisms . . . . .	136
3.9.1. The notion of cross-section . . . . .	136
3.9.2. Elastic scattering on the nuclei . . . . .	138
3.9.3. Inelastic electron–electron collisions . . . . .	139
3.9.4. Electromagnetic braking of electrons: Bremsstrahlung. . . . .	142
3.9.5. Energy distribution in the resist . . . . .	143
3.9.6. Monte Carlo simulation . . . . .	144
3.10. Database preparation . . . . .	146
3.10.1. Database preparation process . . . . .	146
3.10.2. Input formats. . . . .	148
3.10.3. Proximity effects . . . . .	149
3.11. E-beam lithography equipment . . . . .	156
3.11.1. Principle of electron-beam writing . . . . .	156
3.11.2. Examples of Gaussian beam tools . . . . .	168
3.12. E-beam resist process . . . . .	168

3.12.1. The resist . . . . .	169
3.12.2. The nature of the substrate. . . . .	170
3.12.3. Proximity effects . . . . .	170
3.12.4. Development. . . . .	171
3.12.5. The energy of the electrons . . . . .	172
3.12.6. Thickness of the resist film . . . . .	173
3.12.7. Summary . . . . .	174
3.12.8. Chemically Amplified Resists (CARs) . . . . .	176
3.12.9. Non-CARs . . . . .	176
3.12.10. Evacuation of charges on a dielectric. . . . .	178
3.13. Bibliography . . . . .	179
<b>Chapter 4. Focused Ion Beam Direct-Writing . . . . .</b>	<b>183</b>
Jacques GIERAK	
4.1. Introduction. . . . .	183
4.1.1. A little history . . . . .	183
4.1.2. So why did it take so long to implement that suggestion? . . . . .	184
4.2. Main fields of application of focused ion beams . . . . .	185
4.2.1. Scanning ion microscopy . . . . .	185
4.2.2. Ion lithography on sensitive resists . . . . .	187
4.2.3. Implantation . . . . .	188
4.2.4. Localized etching . . . . .	189
4.2.5. Reactive gas and metal precursor injection. . . . .	191
4.3. From microfabrication to nanoetching . . . . .	193
4.3.1. Principles and properties of liquid metal ion sources . . . . .	194
4.3.2. Principles and properties of an ion column for focused ion beam generation . . . . .	199
4.3.3. Calculation of the optical properties of an electrostatic system . . . . .	210
4.3.4. Optimization: a very high resolution FIB column (NanoFIB). . . . .	212
4.3.5. Architecture of FIB instruments . . . . .	216
4.4. The applications . . . . .	216
4.4.1. Thin membrane preparation for Transmission Electron Microscopy (TEM). . . . .	216
4.4.2. Exploration of the ultimate nanostructuring potential of a focused ion beam. . . . .	219
4.5. Conclusion . . . . .	225
4.6. Acknowledgements . . . . .	226
4.7. Bibliography . . . . .	226

<b>Chapter 5. Charged Particle Optics</b> . . . . .	233
Peter HAWKES	
5.1. The beginnings: optics or ballistics? . . . . .	233
5.2. The two approaches: Newton and Fermat . . . . .	234
5.3. Linear approximation: paraxial optics of systems with a straight optic axis, cardinal elements, matrix representation. . . . .	237
5.4. Types of defect: geometrical, chromatic and parasitic aberrations . . . . .	245
5.4.1 Geometrical aberrations . . . . .	247
5.4.2 Chromatic aberrations . . . . .	252
5.4.3 Parasitic aberrations. . . . .	253
5.5. Numerical calculation. . . . .	253
5.5.1. Optimization. . . . .	257
5.6. Special cases . . . . .	257
5.6.1. Guns . . . . .	257
5.6.2. Aberration correctors. . . . .	264
5.6.3. Further reading . . . . .	268
5.7. Appendix . . . . .	269
5.8. Bibliography . . . . .	269
 <b>Chapter 6. Lithography resists</b> . . . . .	 275
Amandine JOUVE, Michael MAY, Isabelle SERVIN and Julia SIMON	
6.1. Lithographic process . . . . .	275
6.1.1. Substrate preparation. . . . .	276
6.1.2. Resist coating using centrifugation . . . . .	278
6.1.3. Post coating thermal bake/post apply bake (PAB) . . . . .	281
6.1.4. Exposure . . . . .	282
6.1.5. Post exposure bake (PEB). . . . .	282
6.1.6. Development step. . . . .	284
6.2. Photosensitive resists . . . . .	286
6.2.1. Resist types . . . . .	286
6.2.2. PAC resist . . . . .	288
6.2.3. Chemically amplified resists (CAR). . . . .	290
6.2.4. Conclusion. . . . .	315
6.3. Performance criteria. . . . .	316
6.3.1. Sensitivity/contrast . . . . .	316
6.3.2. Process window . . . . .	317
6.3.3. Line roughness . . . . .	319
6.3.4. Resist outgassing . . . . .	321
6.3.5. Reflectivity control. . . . .	326
6.3.6. Pattern collapse . . . . .	333
6.3.7. Thin film effect . . . . .	341
6.3.8. Etch resistance . . . . .	346

x Lithography

6.3.9. Implantation resistance . . . . .	355
6.4. Conclusion . . . . .	358
6.5. Bibliography . . . . .	359
<b>List of Authors</b> . . . . .	<b>369</b>
<b>Index</b> . . . . .	<b>373</b>
