

Table of Contents

Introduction	xi
PART 1. DYNAMICS OF SOLIDS	1
Chapter 1. Motion within Solids.	3
1.1. Representation of the medium	3
1.1.1. Framework of continuum mechanics	3
1.1.2. Representation of motion	4
1.1.3. Representation of internal forces	6
1.2. Elastodynamic equations	8
1.2.1. Navier equations	8
1.2.2. Strain waves	9
1.3. One-dimensional waves	12
1.3.1. Uniaxial stress state	12
1.3.2. Uniaxial strain state	13
1.3.3. The d'Alembert solution	15
1.4. Harmonic waves	16
1.4.1. Definitions	16
1.4.2. Wave dispersion	18
1.4.3. Dispersion of waves in a rod	19
1.5. Viscoelasticity	23
1.5.1. Representation of rheological behavior	23
1.5.2. Creep and relaxation functions	25
1.5.3. Rheological models	28
1.5.4. Complex modulus	31
1.5.5. Waves in viscoelastic media	33

Chapter 2. Shocks in Solids	37
2.1. Discontinuity of stress and velocity.	37
2.1.1. Conservation equations	37
2.1.2. State diagram	40
2.2. Wave course	42
2.2.1. Lagrange diagram.	42
2.2.2. Reflection on a free extremity	43
2.2.3. Reflection on a fixed extremity.	44
2.2.4. Diffraction at an interface	46
2.2.5. Waves and modes.	47
2.3. Shocks of solids	50
2.3.1. Shocks of two solids	50
2.3.2. Successive shocks.	55
2.3.3. Wave trapping and cracking.	56
2.4. Shocks on viscoelastic solids	59
2.4.1. Conditions at the interface.	59
2.4.2. Impact of an elastic solid on a viscoelastic solid.	63
2.4.3. Shock of two viscoelastic solids	65
2.4.4. Propagation of shock in a Maxwell solid	65
 Chapter 3. Waves and Shocks in a Nonlinear Medium	 67
3.1. Irreversible phenomena.	67
3.1.1. Impact velocity	67
3.1.2. Load paths	68
3.1.3. Strain velocity	69
3.1.4. Shear and plasticity.	71
3.1.5. Behavior under high pressure	74
3.2. Adiabatic shear.	76
3.2.1. Dynamic and thermal.	76
3.2.2. Adiabatic shear condition	78
3.3. Propagation in uniaxial stress state	80
3.3.1. Elastoplastic material.	80
3.3.2. Viscoplastic material	85
3.4. Uniaxial strain state	88
3.4.1. Metallic material	88
3.4.2. Geomaterial	92
3.5. Shock waves	95
3.5.1. Origin of the phenomenon.	95
3.5.2. Compaction at the passage of a shock wave	97
3.5.3. Notion of state law	99

Chapter 4. Dynamic Materials Testing	103
4.1. Dynamic testing	103
4.1.1. Testing means	103
4.1.2. Specific difficulty	104
4.2. Hopkinson pressure bars.	106
4.2.1. Device	106
4.2.2. Principle of the test	106
4.2.3. Analysis of the test.	110
4.2.4. Types of loads	112
4.3. Testing by direct impact	112
4.3.1. Device	112
4.3.2. Analysis of the test.	112
4.4. Taylor impact test.	113
4.4.1. Principle of the test	113
4.4.2. Simplified analysis.	114
4.5. Plate impact	115
4.5.1. Devices	115
4.5.2. Analysis elements	116
PART 2. DYNAMIC OF STRUCTURES	117
Chapter 5. Impact on a Simple Structure	119
5.1. Basic structure.	119
5.1.1. Linear system with one degree of freedom	119
5.1.2. Short-term loads	122
5.2. Shock response spectrum	124
5.2.1. “Slot” impulse	124
5.2.2. Various types of pulses	128
5.2.3. Alternating loading	130
5.2.4. Dynamic amplification factor	133
5.3. Iso-damage curves	135
5.3.1. Impulsive loading	135
5.3.2. Alternating load	137
5.4. Modeling a real structure	138
5.4.1. Definition of an equivalent system	138
5.4.2. Beams in flexion	140
5.4.3. Shock on a beam	141
5.4.4. Blast on a beam	144
5.4.5. Shock on a mass supported by a mast	146
5.4.6. Shock on a structure	149

Chapter 6. Collisions of Structures	153
6.1. Shocks on elastic structures	153
6.1.1. Equations of motion	153
6.1.2. Impact of a relatively flexible projectile	154
6.1.3. Coupling in a collision of two structures	155
6.1.4. Fall of a rigid body onto a flexible structure	157
6.2. Shock with crushing.	159
6.2.1. Crushing phenomena	159
6.2.2. Impact force	165
6.3. Classification of shocks.	168
6.3.1. Hard shock and soft shock.	168
6.3.2. Shock with rebound or crushing	170
Chapter 7. Explosions and Blasts.	173
7.1. Accidental explosions.	173
7.1.1. Importance of the risk of explosion	173
7.1.2. Gas explosion process	174
7.1.3. Explosion with confinement	179
7.2. Pressure waves	179
7.2.1. External wave from a detonation	179
7.2.2. External wave after deflagration	186
7.3. Action of an explosion on a structure.	188
7.3.1. Reflection of a shock wave	188
7.3.2. Response spectrum to a detonation	189
7.3.3. Simplified model of an action on a structure	190
7.4. Blast-structure coupling.	194
7.4.1. Coupling conditions	194
7.4.2. Linear approach to coupling.	197
Chapter 8. Mechanical Response of Beams	203
8.1. Dynamic beam models	203
8.1.1. Notations	203
8.1.2. Bernoulli model	205
8.1.3. Rayleigh model	207
8.1.4. Timoshenko model	208
8.2. Impacts on beams	211
8.2.1. Adaptation of the model to a time scale	211
8.2.2. Impact at the center of a beam	213

8.2.3. Beam acted upon by a blast	216
8.2.4. Solicitation in a section of a beam under impact	221
8.3. Calculation by modal superposition	226
8.3.1. Eigenmodes of displacement.	226
8.3.2. Modal base projection.	228
8.3.3. Example of a blast against a wall	230
8.3.4. Transfer function through a bending element	237
8.4. Dynamic buckling	239
8.4.1. Equation of motion for elastic buckling	239
8.4.2. Response to a pulse	241
Chapter 9. Responses of Multiple Degree of Freedom Structures	245
9.1. Modeling through a discrete system	245
9.1.1. Equations of motion	245
9.1.2. Search for eigenmodes	247
9.2. Resolution by modal superposition	249
9.2.1. Projection on a modal base	249
9.2.2. Example	251
9.3. Fluid–structure coupling.	255
9.3.1. Small movements of fluids	255
9.3.2. Concept of added mass	257
9.3.3. Sloshing mode	259
9.3.4. Coupling with a structure.	261
Chapter 10. Response of a Nonlinear Structure	267
10.1. Nonlinear behavior of structures	267
10.1.1. Metallic structures	268
10.1.2. Reinforced concrete structures	271
10.1.3. Flexion and extension in large displacements	278
10.2. Nonlinear system with one degree of freedom	281
10.2.1. Formula	281
10.2.2. Pulse load	282
10.2.3. Plastic rigid approach	283
10.3. The case of elastoplastic behavior	284
10.3.1. Pulse load	284
10.3.2. Nonlinear response spectrum.	286
10.3.3. Equivalent system	291

x	Materials and Structures under Shock and Impact	
	10.4. Approach of response to a violent impact	292
	10.4.1. Shock on a beam.	292
	10.4.2. Impact of a distributed load	295
	Bibliography.	299
	Index	309
