<b>LIST OF ABBREVIATIONS</b> . . . . .	xi
<b>INTRODUCTION</b> . . . . .	xiii
<b>PART 1. MANAGEMENT OF DISTRIBUTED INFRASTRUCTURES</b> . . . . .	1
<b>CHAPTER 1. DISTRIBUTED INFRASTRUCTURES BEFORE THE RISE OF VIRTUALIZATION</b> . . . . .	3
1.1. Overview of distributed infrastructures . . . . .	3
1.1.1. Cluster . . . . .	3
1.1.2. Data center . . . . .	4
1.1.3. Grid . . . . .	4
1.1.4. Volunteer computing platforms . . . . .	5
1.2. Distributed infrastructure management from the software point of view . . . . .	6
1.2.1. Secured connection to the infrastructure and identification of users . . . . .	6
1.2.2. Submission of tasks . . . . .	7
1.2.3. Scheduling of tasks . . . . .	8
1.2.4. Deployment of tasks . . . . .	9
1.2.5. Monitoring the infrastructure . . . . .	9
1.2.6. Termination of tasks . . . . .	10

1.3. Frameworks traditionally used to manage distributed infrastructures . . . . .	10
1.3.1. User-space frameworks . . . . .	10
1.3.2. Distributed operating systems . . . . .	11
1.4. Conclusion . . . . .	12
<b>CHAPTER 2. CONTRIBUTIONS OF VIRTUALIZATION . . . . .</b>	<b>13</b>
2.1. Introduction to virtualization . . . . .	13
2.1.1. System and application virtualization . . . . .	13
2.1.2. Abstractions created by hypervisors . . . . .	16
2.1.3. Virtualization techniques used by hypervisors . . . . .	17
2.1.4. Main functionalities provided by hypervisors . . . . .	19
2.2. Virtualization and management of distributed infrastructures . . . . .	22
2.2.1. Contributions of virtualization to the management of distributed infrastructures . . . . .	22
2.2.2. Virtualization and cloud computing . . . . .	24
2.3. Conclusion . . . . .	25
<b>CHAPTER 3. VIRTUAL INFRASTRUCTURE MANAGERS USED IN PRODUCTION . . . . .</b>	<b>27</b>
3.1. Overview of virtual infrastructure managers . . . . .	27
3.1.1. Generalities . . . . .	27
3.1.2. Classification . . . . .	28
3.2. Resource organization . . . . .	28
3.2.1. Computing resources . . . . .	28
3.2.2. Storage resources . . . . .	30
3.3. Scheduling . . . . .	31
3.3.1. Scheduler architecture . . . . .	31
3.3.2. Factors triggering scheduling . . . . .	33
3.3.3. Scheduling policies . . . . .	35
3.4. Advantages . . . . .	37
3.4.1. Application programming interfaces and user interfaces . . . . .	39
3.4.2. Isolation between users . . . . .	39
3.4.3. Scalability . . . . .	40
3.4.4. High availability and fault-tolerance . . . . .	42

3.5. Limits . . . . .	45
3.5.1. Scheduling . . . . .	45
3.5.2. Interfaces . . . . .	46
3.6. Conclusion . . . . .	46
<b>PART 2. TOWARD A COOPERATIVE AND DECENTRALIZED FRAMEWORK TO MANAGE VIRTUAL INFRASTRUCTURES</b>	<b>49</b>
<b>CHAPTER 4. COMPARATIVE STUDY BETWEEN VIRTUAL INFRASTRUCTURE MANAGERS AND DISTRIBUTED OPERATING SYSTEMS</b>	<b>51</b>
4.1. Comparison in the context of a single node . . . . .	52
4.1.1. Task lifecycle . . . . .	52
4.1.2. Scheduling . . . . .	53
4.1.3. Memory management . . . . .	56
4.1.4. Summary . . . . .	58
4.2. Comparison in a distributed context . . . . .	59
4.2.1. Task lifecycle . . . . .	59
4.2.2. Scheduling . . . . .	61
4.2.3. Memory management . . . . .	62
4.2.4. Summary . . . . .	64
4.3. Conclusion . . . . .	64
<b>CHAPTER 5. DYNAMIC SCHEDULING OF VIRTUAL MACHINES</b>	<b>67</b>
5.1. Scheduler architectures . . . . .	67
5.1.1. Monitoring . . . . .	68
5.1.2. Decision-making . . . . .	68
5.2. Limits of a centralized approach . . . . .	69
5.3. Presentation of a hierarchical approach: Snooze . . . . .	70
5.3.1. Presentation . . . . .	70
5.3.2. Discussion . . . . .	71
5.4. Presentation of multiagent approaches . . . . .	72
5.4.1. A bio-inspired algorithm for energy optimization in a self-organizing data center . . . . .	72
5.4.2. Dynamic resource allocation in computing clouds through distributed multiple criteria decision analysis	73

5.4.3. Server consolidation in clouds through gossiping . . .	74
5.4.4. Self-economy in cloud data centers – statistical assignment and migration of virtual machines . . . . .	75
5.4.5. A distributed and collaborative dynamic load balancer for virtual machine . . . . .	76
5.4.6. A case for fully decentralized dynamic virtual machine consolidation in clouds . . . . .	77
5.5. Conclusion . . . . .	78
<b>PART 3. DVMS, A COOPERATIVE AND DECENTRALIZED FRAMEWORK TO DYNAMICALLY SCHEDULE VIRTUAL MACHINES . . . . .</b>	<b>83</b>
<b>CHAPTER 6. DVMS: A PROPOSAL TO SCHEDULE VIRTUAL MACHINES IN A COOPERATIVE AND REACTIVE WAY . . . . .</b>	<b>85</b>
6.1. DVMS fundamentals . . . . .	86
6.1.1. Working hypotheses . . . . .	86
6.1.2. Presentation of the event processing procedure . . .	87
6.1.3. Acceleration of the ring traversal . . . . .	90
6.1.4. Guarantee that a solution will be found if it exists . . . . .	90
6.2. Implementation . . . . .	95
6.2.1. Architecture of an agent . . . . .	96
6.2.2. Leveraging the scheduling algorithms designed for entropy . . . . .	98
6.3. Conclusion . . . . .	99
<b>CHAPTER 7. EXPERIMENTAL PROTOCOL AND TESTING ENVIRONMENT . . . . .</b>	<b>101</b>
7.1. Experimental protocol . . . . .	101
7.1.1. Choosing a testing platform . . . . .	101
7.1.2. Defining the experimental parameters . . . . .	101
7.1.3. Initializing the experiment . . . . .	102
7.1.4. Injecting a workload . . . . .	102
7.1.5. Processing results . . . . .	103
7.2. Testing framework . . . . .	103

---

7.2.1. Configuration . . . . .	103
7.2.2. Components . . . . .	104
7.3. Grid'5000 test bed . . . . .	106
7.3.1. Presentation . . . . .	107
7.3.2. Simulations . . . . .	107
7.3.3. Real experiments . . . . .	108
7.4. SimGrid simulation toolkit . . . . .	109
7.4.1. Presentation . . . . .	109
7.4.2. Port of DVMS to SimGrid . . . . .	109
7.4.3. Advantages compared to the simulations on Grid'5000 . . . . .	110
7.4.4. Simulations . . . . .	110
7.5. Conclusion . . . . .	111
<b>CHAPTER 8. EXPERIMENTAL RESULTS AND VALIDATION OF DVMS . . . . .</b>	<b>113</b>
8.1. Simulations on Grid'5000 . . . . .	113
8.1.1. Consolidation . . . . .	114
8.1.2. Infrastructure repair . . . . .	119
8.2. Real experiments on Grid'5000 . . . . .	123
8.2.1. Experimental parameters . . . . .	123
8.2.2. Results . . . . .	125
8.3. Simulations with SimGrid . . . . .	128
8.3.1. Experimental parameters . . . . .	128
8.3.2. Results . . . . .	129
8.4. Conclusion . . . . .	130
<b>CHAPTER 9. PERSPECTIVES AROUND DVMS . . . . .</b>	<b>133</b>
9.1. Completing the evaluations . . . . .	133
9.1.1. Evaluating the amount of resources consumed by DVMS . . . . .	133
9.1.2. Using real traces . . . . .	134
9.1.3. Comparing DVMS with other decentralized approaches . . . . .	135
9.2. Correcting the limitations . . . . .	135
9.2.1. Implementing fault-tolerance . . . . .	135
9.2.2. Improving event management . . . . .	136

9.2.3. Taking account of links between virtual machines . . . . .	138
9.3. Extending DVMS . . . . .	138
9.3.1. Managing virtual machine disk images . . . . .	139
9.3.2. Managing infrastructures composed of several data centers connected by means of a wide area network . . . . .	139
9.3.3. Integrating DVMS into a full virtual infrastructure manager . . . . .	140
9.4. Conclusion . . . . .	140
<b>CONCLUSION</b> . . . . .	141
<b>BIBLIOGRAPHY</b> . . . . .	145
<b>LIST OF TABLES</b> . . . . .	157
<b>LIST OF FIGURES</b> . . . . .	159
<b>INDEX</b> . . . . .	163
