

Table of Contents

Chapter 1. Supply Chain Management Simulation: An Overview	1
Caroline THIERRY, Gérard BEL and André THOMAS	
1.1. Supply chain management.	1
1.1.1. Supply chain viewpoints	1
1.1.2. Supply chain management.	2
1.1.2.1. Supply chain processes: the integrated supply chain point of view	2
1.1.2.2. Dynamic behavior of supply chain management system	4
1.1.2.3. Supply chain processes: the collaborative supply chain point of view	5
1.2. Supply chain management simulation.	5
1.2.1. Why use simulation for SCM?	5
1.2.2. How can we use SCM simulation?	7
1.3. Supply chain management simulation types	8
1.3.1. Production management models focus.	8
1.3.1.1. Time bucket models	9
1.3.1.2. Starting time models.	10
1.3.2. Simulation types	11
1.3.2.1. Size of the system	11
1.3.2.2. Complexity of the production management system	11
1.3.2.3. Different types of models for SCM simulation	11
1.3.3. SCM simulation using continuous simulation approach	12
1.3.3.1. System dynamics.	12
1.3.3.2. Production management models/simulation models	13
1.3.4. SCM simulation using discrete-event approach	13
1.3.4.1. Time bucket-driven approach	15
1.3.4.2. Event-driven approach	18
1.3.5. Simulation of supply chain management using games	19
1.3.5.1. Games and simulation	19
1.3.5.2. Production management models/simulation models	20

1.4. Decision systems and simulation models (systems)	20
1.4.1. Models and system distribution	20
1.4.2. Centralized simulation	24
1.4.3. Multi-agent system decision simulation	25
1.4.4. Simulation for product-driven systems.	26
1.4.5. Model synchronization = HLA distributed simulation approaches . .	27
1.5. Simulation software	29
1.6. Simulation methodology.	29
1.6.1. Evaluation of simulation models	29
1.6.2. Reduction of simulation models.	30
1.6.2.1. Reducing model literature review	30
1.6.2.2. The reducing model problem.	31
1.6.2.3. Another state reduction using the bottleneck notion	32
1.7. Conclusion	34
1.8. Bibliography	35
Chapter 2. Continuous Simulation for SCM	37
Daniel THIEL and Vo Thi Le HOA	
2.1. System dynamics models for SCM	37
2.1.1. Complexity in supply chain logistics.	37
2.1.2. Cybernetics and feedback concept	38
2.1.3. Basic principles of system dynamics	39
2.1.3.1. Forrester's theory.	39
2.1.3.2. Simulation techniques	42
2.1.4. How can we represent the supply chain decision system?	44
2.1.5. Literature review.	46
2.2. Application: recent research into the bullwhip effect	48
2.2.1. Bullwhip effect in supply chains	48
2.2.1.1. Bullwhip effect definition.	48
2.2.1.2. Supply chain perturbations	48
2.2.1.3. Bullwhip effect causes	48
2.2.1.4. Bullwhip effect reduction solutions	49
2.2.2. Bullwhip effect modeling	50
2.2.2.1. Example of a BE diffusion model	50
2.2.2.2. BE system dynamics models	52
2.2.2.3. BE multi-agent models	57
2.3. Conclusion	59
2.4. Bibliography	59
2.5. Appendix 1	65

Chapter 3. Discrete-event Simulation for Supply Chain Management	69
Valérie BOTTA-GENOULAZ, Jacques LAMOTHE, Florence PICARD, Fouad RIANE and Anthony VALLA	
3.1. Discrete-event simulation and supply chain	69
3.1.1. Introduction	69
3.1.2. Event-driven and time bucket-driven simulation for supply chains . .	70
3.2. Discrete-event simulation for supply chain redesign	73
3.2.1. Problem definition	73
3.2.2. Problem statement	74
3.2.3. Decision aid approach	75
3.2.4. Models of the decision aid approach	76
3.2.5. Discrete-event simulation model	77
3.2.5.1. Resources	77
3.2.5.2. Simulated processes	77
3.2.5.3. Simulation and decision-making	79
3.2.5.4. Performance indicators	80
3.2.6. Illustrative application	80
3.3. Discrete-event simulation for cooperation process risk analysis	83
3.3.1. Context of the study	83
3.3.2. The simulator's principles	84
3.3.3. Example of application	87
3.4. Discrete-event simulation for business process reengineering	91
3.4.1. Methodology	91
3.4.1.1. Modeling	92
3.4.1.2. Simulation and diagnosis	93
3.4.1.3. Evaluation of different solutions	93
3.4.2. Application	94
3.4.2.1. Description of the business process	94
3.4.2.2. Application of the modeling stage	95
3.4.2.3. Application of the simulation and diagnosis stage	95
3.4.2.4. Evaluation of different solutions in the third stage	97
3.4.3. Discussion	98
3.5. Conclusion	99
3.6. Bibliography	99
Chapter 4. Simulation Games	103
Thierry MOYAUX, Éric BALLOT, Michel GREIF and Bertrand SIMON	
4.1. Introduction	103
4.2. Literature review	104
4.2.1. Board games	106
4.2.1.1. The Beer Game	106
4.2.1.2. Derivatives of the Beer Game	108

4.2.1.3. The Trust and Tracing Game	111
4.2.1.4. The Mortgage Service Game	111
4.2.1.5. Legostics Management	111
4.2.1.6. Risk pooling	112
4.2.2. Sophisticated games.	112
4.2.2.1. Trading Agent Competition – Supply Chain Management	112
4.2.2.2. Chain Game for distributed trading and negotiation	113
4.2.2.3. Business Network Lab	114
4.2.2.4. SIMBU.	114
4.3. Theories about the usage of games.	114
4.3.1. Games as a booster for learners?	115
4.3.1.1. Backgrounds	115
4.3.1.2. Evaluation	116
4.3.2. Games as a research field for managerial behavior	117
4.3.2.1. The role of the “human factor” in replenishment or inventory decisions	117
4.3.2.2. Why choose games to conduct supply chain research?	117
4.3.2.3. Testing hypothesis on manager behavior.	117
4.4. Examples of implementation methodologies and obtained results	119
4.4.1. Kanban game in academic institutions.	121
4.4.2. A field for experimentation	123
4.5. Conclusion	123
4.6. Bibliography	123
Chapter 5. Centralized Approaches for Supply Chain Simulation: Issues and Applications	129
Lyes BENYOUCEF, Vipul JAIN and Patrick CHARPENTIER	
5.1. Introduction	129
5.2. Supply chain centralized simulation – a literature review	130
5.3. Supply chain simulation using centralized approaches	134
5.4. Some industrial and practical applications	134
5.4.1. Production – distribution network design in automotive industry	134
5.4.1.1. Network description	135
5.4.1.2. Make-to-Stock and Make-to-Order strategies	136
5.4.1.3. The simulation model	136
5.4.1.4. Optimization variables	138
5.4.1.5. Optimization specifications.	139
5.4.1.6. Experimental results and analyses.	139
5.4.2. Supplier selection problem in textile industry	141
5.4.2.1. Supply chain description	141
5.4.2.2. The simulation-optimization model	143
5.4.2.3. Genetic representation and operations	143

5.4.2.4. Discrete-event simulation model	144
5.4.2.5. Experimental results and analyses	145
5.4.3. Another practical example from the automotive industry	147
5.4.3.1. Supply chain description	147
5.4.3.2. From the generic model of a supply flow to its simulation	149
5.4.3.3. Illustrative example	152
5.5. Conclusions and perspectives	153
5.6. Bibliography	154
Chapter 6. The Interest of Agents for Supply Chain Simulation	159
Thibaud MONTEIRO, Didier ANCIAUX, Bernard ESPINASSE, Alain FERRARINI, Olivier LABARTHE and Daniel ROY	
6.1. Decision problems in enterprise networks	159
6.2. State of the art: modeling and simulation of supply chains with agents	161
6.2.1. Introduction to the agent and MAS	161
6.2.1.1. Agent definition and typology	162
6.2.1.2. MAS	164
6.2.2. Supply chain simulation with agents	168
6.2.2.1. Interests of the agent approach	168
6.2.2.2. Review of works on agent-based supply chain modeling and simulation	171
6.3. Conclusion and summary of the projects	181
6.4. Bibliography	183
Chapter 7. Agent-based Simulation of Business Network Planning and Coordination Systems	189
Thibaud MONTEIRO, Didier ANCIAUX, Sophie D'AMOURS, Bernard ESPINASSE, Alain FERRARINI, Olivier LABARTHE and Daniel ROY	
7.1. Decision system in a supply chain	189
7.2. Decision-making tools to supply chain control	190
7.2.1. Distributed planning in supply chain	191
7.2.1.1. Multi-agent architecture	191
7.2.1.2. Planning the supply chain	192
7.2.2. Confirmed order management in a stochastic environment	197
7.2.2.1. Decision problem	197
7.2.2.2. Decision process for new order integration	198
7.2.3. Experimental agent-based platform for tactical planning in the softwood lumber industry	200
7.3. Simulation tools to design supply chain planning and coordination systems	203
7.3.1. Order management evaluation	203

x	Simulation for Supply Chain Management	
7.3.2.	Performance evaluation of various coordination policies according to the location of the decoupling point	206
7.3.3.	Design of cooperation mechanism	212
7.3.3.1.	Example of simulation for multi-negotiation parameter	213
7.3.4.	SPEE	215
7.4.	Bibliography	218
Chapter 8. Simulation for Product-driven Systems	221
André THOMAS, Pierre CASTAGNA, Rémi PANNEQUIN, Thomas KLEIN, Hind EL HAOUZI, Pascal BLANC and Olivier CARDIN		
8.1.	Introduction	221
8.2.	Control architectures of manufacturing systems	222
8.2.1.	Hierarchical control architectures	222
8.2.2.	Heterarchical control architectures	223
8.2.3.	Product-driven architectures	224
8.3.	Validation with simulation in HMS or product-driven systems	227
8.3.1.	Concept of emulation	228
8.3.2.	Simulation modeling with emulator and control system	229
8.3.2.1.	Emulation model	229
8.3.2.2.	Control model	230
8.4.	Simulation: a computer-aided tool for product-driven systems	232
8.5.	Industrial applications	234
8.5.1.	Furniture company case study	234
8.5.1.1.	Context	234
8.5.1.2.	Proposed architecture	236
8.5.2.	Multi-line synchronization	239
8.5.2.1.	Industrial context	239
8.5.2.2.	System architecture at Trane	240
8.5.2.3.	Limits and perspectives	244
8.5.3.	AGP case study	245
8.5.3.1.	Context	245
8.5.3.2.	Proposed architecture	246
8.5.3.3.	Evaluation of the control by simulation	251
8.6.	Conclusion	252
8.7.	Bibliography	253
Chapter 9. HLA Distributed Simulation Approaches for Supply Chains	257
Fouzia OUNNAR, Bernard ARCHIMEDE, Philippe CHARBONNAUD and Patrick PUJO		
9.1.	Introduction	257
9.2.	Modeling and discrete-event simulation	259
9.2.1.	Specification using DEVS and SIMBA	259

9.2.2. Model interoperability	260
9.2.3. Model interaction protocols	261
9.3. Self-organized control of supply chain networks	264
9.3.1. Problematics	264
9.3.2. Choice of a decision structure	265
9.3.3. Holonic approach for self-organized control of logistic network	266
9.3.4. DEVS-EPA modeling and distributed simulation in HLA environment.	269
9.3.5. Ranking and evaluation of the supplier process	272
9.3.6. Analysis of the simulation results: manufacturing of cosmetic products by an enterprise network	274
9.4. Reactive control by evaluation of multi-site plans.	276
9.4.1. Problem statement	276
9.4.2. Development method and tools of multi-site plans	277
9.4.3. Conceptual multi-agent SCEP model	278
9.4.4. Principle of deployment in the SCEP network	281
9.4.5. Development process of multi-site plans	283
9.4.6. Evaluation method and tools of multi-site plans	283
9.4.7. Evaluation by distributed simulation, interest and limits	288
9.5. Conclusion	289
9.6. Bibliography	290
Chapter 10. Software Tools for Simulation	295
Franck FONTANILI, Pierre CASTAGNA and Bernard YANNOU	
10.1. Short history of the tools for simulation in industrial engineering	295
10.2. Typology of the simulation tools for the supply chain	296
10.2.1. General classification	297
10.2.2. Classification according to the versatility and the facility of use.	298
10.2.3. Classification of discrete-event simulation according to the life-cycle of the process	299
10.2.4. Specific classification for SCM	301
10.2.5. The system dynamics software	301
10.3. Key points of the construction of a simulation model.	304
10.3.1. Stage of modeling the actions of a process	304
10.3.2. Stage of describing the laws and rules	305
10.3.3. Logic elements	305
10.3.4. Horizon of simulation	306
10.4. Limits and objectives of simulation tools	307
10.4.1. What they can do.	307
10.4.2. What they cannot do.	307
10.5. Methodology of a simulation project.	308
10.5.1. Step 1: problem analysis	309

10.5.2. Step 2: modeling and programming.	310
10.5.3. Step 3: simulations.	313
10.5.4. Step 4: report/ratio and conclusions.	313
10.6. Possibilities of coupling	314
10.6.1. Input/output data analysis.	314
10.6.2. Inputs/outputs via spreadsheet or database.	315
10.6.3. Control simulator from an external client	316
10.6.4. Coupling with the real process (online simulation).	317
10.7. Main functionalities and criteria of selection of a tool	318
10.8. Classification of the commercial tools	319
10.8.1. Offer highlights.	319
10.8.2. General presentation of three software tools.	320
10.8.2.1. Arena TM	320
10.8.2.2. Witness TM	320
10.8.2.3. Quest TM	321
10.9. Example of modeling with three tools	321
10.9.1. Description of the process and knowledge model	321
10.9.2. Modeling with Arena	322
10.9.3. Modeling and simulation with Witness.	326
10.9.4. Modeling with Quest	331
10.9.5. Example of modeling of a total logistic chain.	335
10.10. Useful links	335
10.11. Bibliography	336
List of Authors	339
Index	345
