PART 1. CONSTRAINT PROGRAMMING AND FOUNDATIONS OF GRAPH THEORY	1
Introduction to Part 1	3
Chapter 1. Introduction to Constraint Programming	5
1.1. What is a variable?	7
1.2. What is a constraint?	8
1.3. What is a global constraint?	10
1.4. What is a propagation algorithm?	11
1.5. What is a consistency level?	14
1.6. What is a constraint solver?	15
1.7. Constraint solvers at work	17
1.7.1. Importance of modeling	17
1.7.2. Importance of heuristics in guiding research	20
1.7.3. Importance of using global constraints	21
1.8. Organization structure	21
Chapter 2. Graph Theory and Constraint Programming	23
2.1. Modeling graphs with constraint programming	24

2.1.1.	Representing a family of graphs	24
2.1.2.	Useful graph definitions and properties	27
2.1.3.	Graph implementation and complexity . . .	33
2.2.	Graph theory at work in constraint programming	34
2.3.	Constraint programming at work in graph theory	37
Chapter 3. Tree Graph Partitioning		39
3.1.	In undirected graphs	39
3.2.	In directed graphs	42
PART 2. CHARACTERIZATION OF TREE-BASED GRAPH PARTITIONING CONSTRAINTS		47
Chapter 4. Tree Constraints in Undirected Graphs		49
4.1.	Decomposition	49
4.2.	Definition of constraints	51
4.3.	A filtering algorithm for the proper-forest constraint	56
4.3.1.	A solution for the proper-forest constraint	57
4.3.2.	Hybrid-consistency for the <i>proper-forest</i> constraint	59
4.3.3.	Correction and completion	61
4.3.4.	Complexity	64
4.4.	Filtering algorithm for the resource-forest constraint	70
4.4.1.	Existence of a solution for the resource-forest constraint	70
4.4.2.	Hybrid-consistency for the resource-forest constraint	72
4.4.3.	Correction and completion	73

4.4.4. Complexity	79
4.5. Summary of undirected tree constraints	80
Chapter 5. Tree Constraints in Directed Graphs	83
5.1. Decomposition	83
5.2. Definition of constraints	86
5.3. Filtering algorithm for the tree constraint	89
5.3.1. Existence of a solution for a tree constraint	89
5.3.2. General arc-consistency for the tree constraint	91
5.3.3. Correction and completion	93
5.3.4. Complexity	96
5.4. Filtering algorithm for the proper-tree constraint	96
5.4.1. Limits on the number of proper trees	99
5.4.2. Existence of a solution for the <i>proper-tree</i> constraint	103
5.4.3. Filtering algorithm for the <i>proper-tree</i> constraint	104
5.4.4. Correction	109
5.4.5. Complexity	112
5.5. Summary of tree constraints in directed and undirected graphs	113
Chapter 6. Additional Constraints Linked to Graph Partitioning	117
6.1. Definition of restrictions	118
6.2. Complexity zoo	123
6.2.1. Proper trees	124
6.2.2. Precedence constraints	124
6.2.3. Conditional precedence constraints	126
6.2.4. Constraints on the interior half-degree of vertices	127

6.2.5.	Incomparability constraints	128
6.3.	Interaction between the number of trees and the number of proper trees	129
6.4.	Relation of precedence between the vertices of the graph	130
6.4.1.	Limitations on the maximum number of trees	131
6.4.2.	Filtering linked to a set of precedence constraints	132
6.4.3.	Filtering and complexity algorithm	134
6.5.	Relation of conditional precedence	137
6.5.1.	Filtering linked to a conditional precedence set	138
6.5.2.	Algorithmic and complexity	139
6.6.	Relation of incomparability between graph vertices	140
6.6.1.	Filtering linked to incomparability constraints	141
6.6.2.	Filtering and complexity algorithm	142
6.7.	Interactions between precedence and incomparability constraints	143
6.7.1.	Improving filtering via interactions	143
6.7.2.	Deduction of new precedence constraints	146
6.8.	Constraining the interior half-degree of each vertex	148
6.9.	Summary	151
Chapter 7. The Case of Disjoint Paths		153
7.1.	Minimum number of paths in acyclic directed graphs	156
7.2.	Minimum number of paths in any directed graph	161
7.2.1.	Estimating the number of paths partitioning a CFC	164

7.2.2. Estimating the number of paths between two CFCs	167
7.3. A path partitioning constraint	169
7.4. Summary	173
Chapter 8. Implementation of a Tree Constraint	175
8.1. Original implementation	176
8.1.1. The tree constraint	176
8.1.2. The extended-tree constraint	179
8.1.3. Limitations of the approach: illustration using the <i>tree</i> constraint	180
8.2. Toward a “portable” implementation	181
8.2.1. Implementation	183
8.2.2. Bench mark	185
8.2.2.1. Historic implementation versus adaptable implementation	186
8.2.2.2. Evaluation of portability	189
8.3. Conclusion	191
PART 3. IMPLEMENTATION: TASK PLANNING	193
Introduction to Part 3	195
Chapter 9. First Model in Constraint Programming	199
9.1. Model for the coherence of displacements in space	199
9.2. Modeling resource consumption	200
9.3. Modeling time windows	201
9.4. Modeling coordination constraints between units	202
9.5. Limitations of the proposed model	203

Chapter 10. Advanced Model in Constraint Programming	205
10.1. Modeling the coherence of displacements in space	206
10.2. Modeling resource consumption	208
10.3. Integration of temporal aspects	208
10.4. Propagating time windows	213
10.4.1. Interaction with the graph to be partitioned	213
10.4.2. Interaction with the precedence graph	215
10.4.3. Deriving impossible paths	217
10.4.4. Interaction with the original tree constraint	219
10.4.5. Complexity	219
10.4.6. Integration into the mission planning model	222
PART 4. CONCLUSION AND FUTURE WORK	225
Chapter 11. Conclusion	227
Chapter 12. Perspectives and Criticisms	231
Bibliography	233
Index	239
