

Table of Contents

Preface	ix
Nomenclature	xiii
Chapter 1. Parametric Sensitivity of Damped Systems	1
1.1. Parametric sensitivity of undamped systems	2
1.1.1. Sensitivity of the eigenvalues	2
1.1.2. Sensitivity of the eigenvectors	3
1.2. Parametric sensitivity of viscously damped systems	5
1.2.1. Sensitivity of the eigenvalues	6
1.2.2. Sensitivity of the eigenvectors	9
1.3. Parametric sensitivity of non-viscously damped systems	22
1.3.1. Sensitivity of the eigenvalues	23
1.3.2. Sensitivity of the eigenvectors	25
1.4. Summary	41
Chapter 2. Identification of Viscous Damping	43
2.1. Identification of proportional viscous damping	44
2.1.1. Damping identification using generalized proportional damping . .	45
2.1.2. Error propagation in the damping identification method	48
2.1.3. Numerical examples	49
2.1.4. Experimental results	51
2.1.5. Synopsis	67

2.2. Identification of non-proportional viscous damping	69
2.2.1. The theory of damping identification	71
2.2.2. Numerical examples	75
2.2.3. Error analysis	88
2.2.4. Synopsis	90
2.3. Symmetry-preserving damping identification	91
2.3.1. The theory of symmetric damping matrix identification	91
2.3.2. Numerical examples	97
2.3.3. Synopsis	104
2.4. Direct identification of the damping matrix	104
2.4.1. The modified Lancaster's method	105
2.4.2. Numerical examples	111
2.4.3. Synopsis	117
2.5. Summary	118
Chapter 3. Identification of Non-viscous Damping	121
3.1. Identification of exponential non-viscous damping model	123
3.1.1. Background of complex modes	123
3.1.2. Fitting of the relaxation parameter	125
3.1.3. Fitting of the coefficient matrix	140
3.1.4. Synopsis	149
3.2. Symmetry preserving non-viscous damping identification	151
3.2.1. Theory	151
3.2.2. Numerical examples	155
3.2.3. Synopsis	159
3.3. Direct identification of non-viscous damping	160
3.3.1. Lancaster's method for non-viscously damped systems	161
3.3.2. Numerical examples	165
3.3.3. Synopsis	167
3.4. Summary	168
Chapter 4. Quantification of Damping	169
4.1. Quantification of non-proportional damping	169
4.1.1. Optimal normalization of complex modes	171
4.1.2. An index of non-proportionality	182
4.1.3. Alternative normalization methods	187
4.1.4. Synopsis	193

4.2. Quantification of non-viscous damping	193
4.2.1. Non-viscosity indices	195
4.2.2. Numerical examples	203
4.2.3. Error analysis	208
4.2.4. Synopsis	211
4.3. Summary	211
Bibliography	213
Author Index	243
Index	245
