Foreword by J.-F. Aubry	ix
Foreword by L. Portinale	xiii
Acknowledgments	xv
Introduction	xvii
Part 1. Bayesian Networks	1
Chapter 1. Bayesian Networks: a Modeling Formalism for System Dependability	3
1.1. Probabilistic graphical models: BN	5
1.1.1. BN: a formalism to model dependability	5
1.1.2. Inference mechanism	7
1.2. Reliability and joint probability distributions	8
1.2.1. Multi-state system example	8
1.2.2. Joint distribution	9
1.2.3. Reliability computing	9
1.2.4. Factorization	10
1.3. Discussion and conclusion	14

Chapter 2. Bayesian Network: Modeling Formalism of the Structure Function of Boolean Systems	17
2.1. Introduction	17
2.2. BN models in the Boolean case	19
2.2.1. BN model from cut-sets	20
2.2.2. BN model from tie-sets	23
2.2.3. BN model from a top-down approach	25
2.2.4. BN model of a bowtie	26
2.3. Standard Boolean gates CPT	29
2.4. Non-deterministic CPT	31
2.5. Industrial applications	38
2.6. Conclusion	41
Chapter 3. Bayesian Network: Modeling Formalism of the Structure Function of Multi-State Systems	43
3.1. Introduction	43
3.2. BN models in the multi-state case	43
3.2.1. BN model of multi-state systems from tie-sets	44
3.2.2. BN model of multi-state systems from cut-sets	49
3.2.3. BN model of multi-state systems from functional and dysfunctional analysis	52
3.3. Non-deterministic CPT	58
3.4. Industrial applications	59
3.5. Conclusion	62
Part 2. Dynamic Bayesian Networks	65
Chapter 4. Dynamic Bayesian Networks: Integrating Environmental and Operating Constraints in Reliability Computation	67
4.1. Introduction	67
4.2. Component modeled by a DBN	69

4.2.1. DBN model of a MC	70
4.2.2. DBN model of non-homogeneous MC	71
4.2.3. Stochastic process with exogenous constraint	72
4.3. Model of a dynamic multi-state system	75
4.4. Discussion on dependent processes	79
4.5. Conclusion	81
Chapter 5. Dynamic Bayesian Networks: Integrating Reliability Computation in the Control System	83
5.1. Introduction	83
5.2. Integrating reliability information into the control	84
5.3. Control integrating reliability modeled by DBN	85
5.3.1. Modeling and controlling an over-actuated system	86
5.3.2. Integrating reliability	88
5.4. Application to a drinking water network	90
5.4.1. DBN modeling	91
5.4.2. Results and discussion	92
5.5. Conclusion	95
5.6. Acknowledgments	96
Conclusion	97
