
Contents

Chapter 1. Introduction	1
1.1. General introduction	1
1.2. History and three mainstays	2
1.3. Scientific context	2
1.3.1. Dioids	3
1.3.2. Petri nets	4
1.3.3. Time and algebraic models	5
1.4. Organization of the book	7
Chapter 2. Consistency	9
2.1. Introduction	9
2.1.1. Models	9
2.1.2. Physical point of view	11
2.1.3. Objectives	12
2.2. Preliminaries	14
2.3. Models and principle of the approach	17
2.3.1. P-time event graphs	17
2.3.2. Dater form	21
2.3.3. Principle of the approach (example 2)	23

2.4.	Analysis in the “static” case	25
2.5.	“Dynamic” model	28
2.6.	Extremal acceptable trajectories by series of matrices	31
2.6.1.	Lowest state trajectory	32
2.6.2.	Greatest state trajectory	35
2.7.	Consistency	36
2.7.1.	Example 3	41
2.7.2.	Maximal horizon of temporal consistency	44
2.7.3.	Date of the first token deaths	47
2.7.4.	Computational complexity	48
2.8.	Conclusion	50
Chapter 3.	Cycle Time	53
3.1.	Objectives	53
3.2.	Problem without optimization	55
3.2.1.	Objective	55
3.2.2.	Matrix expression of a P-time event graph	56
3.2.3.	Matrix expression of P-time event graphs with interdependent residence durations	57
3.2.4.	General form $Ax \leq b$	59
3.2.5.	Example	60
3.2.6.	Existence of a 1-periodic behavior	61
3.2.7.	Example continued	65
3.3.	Optimization	67
3.3.1.	Approach 1	67
3.3.2.	Example continued	69
3.3.3.	Approach 2	70
3.4.	Conclusion	75
3.5.	Appendix	76

Chapter 4. Control with Specifications	79
4.1. Introduction	79
4.2. Time interval systems	80
4.2.1. (min, max, +) algebraic models	81
4.2.2. Timed event graphs	82
4.2.3. P-time event graphs	83
4.2.4. Time stream event graphs	84
4.3. Control synthesis	88
4.3.1. Problem	88
4.3.2. Pedagogical example: education system	89
4.3.3. Algebraic models	91
4.4. Fixed-point approach	92
4.4.1. Fixed-point formulation	92
4.4.2. Existence	95
4.4.3. Structure	103
4.5. Algorithm	107
4.6. Example	111
4.6.1. Models	111
4.6.2. Fixed-point formulation	113
4.6.3. Existence	114
4.6.4. Optimal control with specifications	116
4.6.5. Initial conditions	117
4.7. Conclusion	118
 Chapter 5. Online Aspect of Predictive Control	 119
5.1. Introduction	119
5.1.1. Problem	119
5.1.2. Specific characteristics	120
5.2. Control without desired output (problem 1)	122
5.2.1. Objective	122
5.2.2. Example 1	123
5.2.3. Trajectory description	124
5.2.4. Relaxed system	125

5.3. Control with desired output (problem 2)	127
5.3.1. Objective	127
5.3.2. Fixed-point form	128
5.3.3. Relaxed system	129
5.4. Control on a sliding horizon (problem 3): online and offline aspects	130
5.4.1. CPU time of the online control	131
5.5. Kleene star of the block tri-diagonal matrix and formal expressions of the sub-matrices	132
5.6. Conclusion	138
Bibliography	141
List of Symbols	149
Index	153
