Introduction	xiii
Charlotte TRUCHET and Gérard ASSAYAG	
Chapter 1. Modeling Temporal Constraints for a System of Interactive Scores	1
Antoine ALLOMBERT, Myriam DESAINTE-CATHERINE and Mauricio TORO	
1.1. Introduction	1
1.2. Formalism of interactive scores	2
1.2.1. Temporal relations	3
1.2.2. Interaction points	4
1.2.3. Modification behaviors	4
1.2.3.1. Fermata behavior	5
1.2.3.2. Chronological and anti-chronological behaviors	5
1.2.3.3. Proportional behavior	7
1.3. ECO machine	8
1.3.1. Supple intervals with fermata behavior	8
1.3.2. General case	10
1.3.3. Interval constraints	11
1.3.4. Constraint propagation	13
1.4. Concurrent constraint time model	15
1.4.1. Ntcc model	15
1.4.1.1. Control points	16
1.4.1.2. Temporal relations	16
1.4.1.3. Example	16

1.4.2. Discussion	17
1.5. Timed conditional branching model	18
1.5.1. Specification of the model	18
1.5.1.1. Control points	19
1.5.1.2. Intervals	19
1.5.1.3. Example	20
1.5.2. Ntcc model	20
1.5.2.1. Control points	21
1.5.2.2. Intervals	21
1.5.2.3. Example	22
1.5.3. Results and discussion	22
1.6. Concluding remarks and future work	22
1.7. Bibliography	23
Chapter 2. Variable Orderings for Solving Musical Constraint Satisfaction Problems	25
Torsten ANDERS	
2.1. Motivation	25
2.2. Background: the constraint model based on computation spaces	28
2.2.1. Propagate-and-search	29
2.2.2. An example	33
2.2.3. Distribution strategy definition	35
2.3. Specializing the constraint model for music	37
2.3.1. Music representation and score contexts	37
2.3.2. Adapting the space-based constraint model	38
2.4. Score distribution strategies	39
2.4.1. Adapting the first-fail principle	40
2.4.2. Resolving inaccessible score contexts	41
2.4.3. Resolving multiple inaccessible score contexts in order	42
2.4.4. Combining the principles resolve-inaccessible-contexts and first-fail	44
2.4.5. The dynamic left-to-right variable ordering	44
2.5. An example: Florid counterpoint	46
2.5.1. The music theory model	47
2.5.2. Search process and results	49
2.6. Summary	51
2.7. Bibliography	52

Chapter 3. Constraints for an Unfolding Time	55
Georges BLOCH and Charlotte TRUCHET	
3.1. Introduction	56
3.1.1. Composition?	56
3.1.2. Writing: the constraints of composition	57
3.1.3. Composition as a synthesis of time	59
3.2. A new set of musical problems: the tiling canons	60
3.2.1. The canon structure	60
3.2.2. Computer representation	63
3.2.3. Harmony?	64
3.2.4. What about time evolution?	66
3.3. Musical constraints on tiling canons	68
3.3.1. Harmonic constraints: virtual fundamental	69
3.3.2. Harmonic constraints: textures	71
3.3.3. Melodic constraint	72
3.3.4. Overconstrained and other constraints	73
3.4. Constraints in time	74
3.4.1. The solving algorithm	74
3.4.2. Constraint process as a musical process	76
3.4.3. Modifying constraints in time	77
3.5. Conclusion	79
3.6. Bibliography	79
Chapter 4. Global Constraints in Orchestration	81
Grégoire CARPENTIER	
4.1. Introduction	81
4.2. The automatic orchestration problem	83
4.3. A unified syntax for global constraints	84
4.3.1. Preliminary definitions	84
4.3.2. Constraint operators	84
4.3.3. Cost functions	85
4.4. The CDCSolver heuristic	87
4.4.1. Conflict constraints versus design constraints	87
4.4.2. Avoiding cycles	89
4.4.3. Choosing the variable to update	90
4.4.4. Using CDCSolver in constrained optimization problems	92
4.5. Performance evaluation	93
4.6. Using CDCSolver in automatic orchestration	94

4.6.1. Timbre “fade in”	95
4.6.2. Speakings ostinato	96
4.7. Conclusions and future work	101
4.8. Bibliography	101
Chapter 5. Using Gecode to Solve Musical Constraint Problems	103
<i>Serge LEMOUTON</i>	
5.1. Plan	104
5.2. Introduction	104
5.3. Why Gecode?	106
5.3.1. Constraints in OpenMusic and PWGL	106
5.3.2. Gecode	107
5.3.3. Gelisp	107
5.3.4. OMGecode implementation	108
5.4. A musical constraint repertoire	108
5.4.1. All-interval	108
5.4.1.1. Definitions	108
5.4.1.2. Results	109
5.4.1.3. Musical uses	110
5.4.2. Constrained melodic strings for Michael Jarrell’s Congruences	111
5.4.2.1. Definition	111
5.4.2.2. “Historic” implementations	113
5.4.2.3. Gecode implementation and results	116
5.4.3. Generating chords by constraints: harmonic rules	117
5.4.3.1. Definition	117
5.4.3.2. Hamming	118
5.4.4. Stroppa vertical pitch structure constraints	119
5.4.4.1. Definition	119
5.4.5. Harmonic profiles	121
5.4.5.1. Definition	121
5.4.6. Melodic interpolations	122
5.4.7. Harmonic progression	123
5.4.7.1. Definition	123
5.5. Musical constraint specificities	123
5.5.1. Time-varying constraints	124
5.5.2. Soft constraints	124
5.5.3. Availability and installation	125
5.6. Conclusion	125
5.7. Bibliography	125

5.8. Appendix A: All-interval script command options	127
5.9. Appendix B: Jarrell problem implemented in C++, using Gecode	129
5.10. Appendix C: Jarrell script command options	130
Chapter 6. Concurrent Constraint Models of Music Interaction	133
Carlos OLARTE, Camilo RUEDA, Gerardo SARRIA, Mauricio TORO and Frank D. VALENCIA	
6.1. Introduction	133
6.2. Concurrent constraint programming	134
6.2.1. The language of CCP processes	135
6.2.2. Timed CCP	136
6.3. Dynamic interactive scores	137
6.3.1. Mobile behavior in tcc and a model of dynamic interactive scores	138
6.4. Non-determinism and verification of musical properties	140
6.4.1. The ntcc calculus	141
6.4.2. Logic characterization of ntccprocesses	142
6.4.3. Modeling rhythm patterns	143
6.5. Real time and preemption	146
6.6. Probabilistic extensions and musical improvisation	149
6.6.1. The factor oracle	149
6.6.2. Probabilistic transversal of the FO	151
6.7. Perspectives and future work	152
6.8. Bibliography	153
Chapter 7. From Rhythm Rules to Music Rules	157
Örjan SANDRED	
7.1. Two constraint-solving systems for musical composition	157
7.2. Music representation	158
7.3. Rhythm representation and OMRC	159
7.4. OMRC and rhythm organization	159
7.5. Basic concepts for rules in OMRC	160
7.6. From OMRC to PWMC	161
7.7. Basic concepts in PWMC	163
7.8. The user interface	165
7.9. More about the domains	166
7.9.1. Motif and groupings of values	167

7.9.2. Metric units	168
7.9.3. Locked variables	168
7.10. Defining rules	169
7.10.1. Access boxes	170
7.10.2. Logic statements	172
7.11. Heuristic rules	173
7.12. A patch example	174
7.13. Strategy rules	177
7.14. Data representation	178
7.14.1. The domain	178
7.14.2. Score representation	179
7.15. Musical example: <i>Labyrinths in the Wind</i>	183
7.15.1. Rules for rhythm	183
7.15.2. Rules for pitch	185
7.15.3. A heuristic stochastic rule	185
7.15.4. Examining the solution	186
7.16. Conclusion and future developments of the systems	187
7.17. Bibliography	188
Chapter 8. OMClouds, a Library for Musical Constraints	189
Charlotte TRUCHET	
8.1. Introduction	189
8.1.1. OpenMusic	190
8.1.2. Constraints in CAC	192
8.2. Some musical CSPs	193
8.2.1. All-intervals series	193
8.2.2. Sorting chords	194
8.2.3. Asynchronous rhythms	194
8.2.4. Spectral chords	196
8.2.5. Gestures	198
8.2.6. Tempo approximation	199
8.2.7. Accelerando	200
8.2.8. Other problems	201
8.2.9. Conclusions on the compositional CSPs	202
8.3. OMClouds	204
8.3.1. Adaptive search	204
8.3.2. CSP definition	205
8.3.3. Generation of the error functions	207
8.3.4. Solving	208
8.3.5. Edition of results	209
