

Table of Contents

| | |
|---|-----|
| Introduction | vii |
| Chapter 1. 0D Analytical Modeling of the Airplane Motions | 1 |
| 1.1. References: axis systems on use. | 2 |
| 1.1.1. Galilean reference: R_0 | 2 |
| 1.1.2. Airplane reference: R_B (body) also called “linked reference” | 2 |
| 1.1.3. Resultant angular velocity. | 6 |
| 1.2. Equations of motion of the airplane | 9 |
| 1.2.1. Expression of Newton’s principle | 10 |
| 1.2.2. Expression of the dynamic momentum | 11 |
| 1.3. Description of external forces and torques | 14 |
| 1.3.1. Aerodynamic forces and torques. | 14 |
| 1.3.2. Sign rules. | 17 |
| 1.4. Description of aerodynamic coefficients. | 18 |
| 1.4.1. Drag coefficient: C_x | 19 |
| 1.4.2. Side lift coefficient C_Y | 19 |
| 1.4.3. Vertical lift due to attack angle: C_{Z_a} | 20 |
| 1.4.4. Lift due to pitch angular velocity: C_{Zq} | 21 |
| 1.4.5. Roll coefficients (due to β , δ_l , p). | 22 |
| 1.4.6. Pitch coefficients (due to α , δ_m , q , static curvature) | 25 |
| 1.4.7. Yaw coefficients (due to β , δ_n , r). | 27 |
| 1.5. Aerodynamic data of a supersonic airliner for valuation of the software | 32 |
| 1.6. Horizontal flight as an initial condition | 33 |
| 1.7. Effect of gravitational forces. | 36 |
| 1.8. Calculation of the trajectory of the airplane in open space | 39 |
| 1.9. Validation by comparison with ONERA Concorde data | 47 |
| 1.10. Definitions of aerodynamic coefficients and derivatives | 51 |
| 1.10.1. Aerodynamic coefficients | 51 |

| | |
|---|-----|
| 1.10.2. Total lift coefficient | 51 |
| 1.10.3. Drag characteristics: (dimensionless) | 55 |
| 1.10.4. Side lift coefficient: C_Y (dimensionless) | 58 |
| 1.10.5. Roll coefficients | 59 |
| 1.10.6. Pitch coefficients | 62 |
| 1.10.7. Yaw coefficients | 66 |
| Chapter 2. Design and Optimization of an Unmanned Aerial Vehicle (UAV) | 69 |
| 2.1. General design of the drone | 71 |
| 2.2. Weight estimation | 72 |
| 2.3. Size estimation | 73 |
| 2.4. Mass and inertia evaluation | 76 |
| 2.4.1. Mass evaluation | 76 |
| 2.4.2. Measurement of the roll inertia (A) | 77 |
| 2.4.3. Measurement of pitch inertia (B) | 79 |
| 2.4.4. Measurement of yaw inertia (C) | 80 |
| 2.5. Convergence toward the target | 82 |
| Chapter 3. Organization of the Auto-Pilot | 91 |
| 3.1. Position of the drone in open space | 93 |
| 3.2. The Dog Law | 95 |
| 3.3. Flight tests | 98 |
| 3.4. Altitude control system | 100 |
| 3.5. Altitude measurement on an actual drone | 102 |
| Bibliography | 111 |
| Index | 113 |
