

## Table of Contents

<b>Foreword</b> . . . . .	xiii
<b>Preface</b> . . . . .	xv
<b>Introduction</b> . . . . .	xvii
<b>Glossary</b> . . . . .	xxiii
<b>Chapter 1. General Introduction to Linear Analysis</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. Motion types . . . . .	2
1.2.1. Sine motion . . . . .	2
1.2.1.1. Pure sine . . . . .	2
1.2.1.2. Swept sine . . . . .	4
1.2.1.3. Periodic motion . . . . .	5
1.2.2. Transient motion . . . . .	5
1.2.3. Random motion . . . . .	7
1.2.3.1. Random process . . . . .	7
1.2.3.2. Time analysis . . . . .	8
1.2.3.3. Statistical analysis . . . . .	9
1.2.3.4. Power spectral densities . . . . .	12
1.3. Time domain and frequency domain . . . . .	14
1.3.1. Introduction . . . . .	14
1.3.2. The time domain . . . . .	15
1.3.3. The frequency domain . . . . .	16

1.4. Frequency Response Functions . . . . .	17
1.4.1. Introduction . . . . .	17
1.4.2. Frequency Response Functions and responses . . . . .	18
1.4.3. The nature of excitations and responses . . . . .	19
1.4.4. The nature of Frequency Response Functions . . . . .	21
1.5. Equations of motion and solution . . . . .	24
1.5.1. Equations of motion . . . . .	24
1.5.2. Solution using the direct frequency approach . . . . .	26
1.5.3. Solution using the modal approach . . . . .	27
1.5.4. Modes and 1-DOF system. . . . .	28
1.6. Analysis and tests . . . . .	29
<b>Chapter 2. The Single-Degree-of-Freedom System . . . . .</b>	<b>33</b>
2.1. Introduction. . . . .	33
2.2. The equation of motion and the solution in the frequency domain . . . . .	35
2.2.1. Equations of motion . . . . .	35
2.2.2. Motion without excitation . . . . .	35
2.2.2.1. The conservative system. . . . .	35
2.2.2.2. Dissipative system . . . . .	37
2.2.3. Solution in the frequency domain . . . . .	39
2.2.4. Dynamic amplifications . . . . .	43
2.2.5. Response to a random excitation . . . . .	49
2.3. Time responses. . . . .	51
2.3.1. Response to unit impulse . . . . .	51
2.3.2. Response to a general excitation . . . . .	55
2.3.3. Response spectra . . . . .	56
2.4. Representation of the damping . . . . .	61
2.4.1. Viscous damping . . . . .	61
2.4.2. Structural damping . . . . .	62
2.4.3. Other representations. . . . .	64
<b>Chapter 3. Multiple-Degree-of-Freedom Systems . . . . .</b>	<b>65</b>
3.1. Introduction. . . . .	65
3.2. Determining the structural matrices . . . . .	66
3.2.1. Introduction . . . . .	66
3.2.2. Local element matrices . . . . .	67
3.2.3. Element matrices in global reference form . . . . .	68
3.2.4. Assembly of element matrices . . . . .	70
3.2.5. Linear constraints between DOF. . . . .	72
3.2.5.1. Introduction . . . . .	72

3.2.5.2. DOF elimination . . . . .	73
3.2.5.3. DOF introduction . . . . .	77
3.2.6. Excitation forces . . . . .	79
3.3. The finite element method . . . . .	80
3.3.1. Introduction . . . . .	80
3.3.2. The rod element . . . . .	82
3.3.3. Beam finite element in bending . . . . .	83
3.3.4. The complete beam finite element . . . . .	86
3.3.5. Excitation forces . . . . .	88
3.4. Industrial models . . . . .	89
3.4.1. Introduction . . . . .	89
3.4.2. The element types . . . . .	89
3.4.3. Linear constraints . . . . .	91
3.4.4. DOF management . . . . .	91
3.4.5. Rules for modeling and verification of the model . . . . .	93
3.4.6. Industrial examples . . . . .	94
3.5. Solution by direct integration . . . . .	95
3.5.1. Introduction . . . . .	95
3.5.2. Example of explicit method . . . . .	96
3.5.3. Example of implicit method . . . . .	97
<b>Chapter 4. The Modal Approach . . . . .</b>	<b>99</b>
4.1. Introduction . . . . .	99
4.2. Normal modes . . . . .	100
4.2.1. Introduction . . . . .	100
4.2.2. Free structures . . . . .	104
4.2.3. System static condensation . . . . .	108
4.2.4. Eigenvalue problem solution . . . . .	111
4.3. Mode superposition . . . . .	115
4.3.1. Introduction . . . . .	115
4.3.2. Equation of motion transformation . . . . .	117
4.3.3. Problem caused by the damping . . . . .	119
4.3.4. Frequency resolution . . . . .	122
4.4. From the frequency approach to the modal approach . . . . .	126
<b>Chapter 5. Modal Effective Parameters . . . . .</b>	<b>129</b>
5.1. Introduction . . . . .	129
5.2. Effective modal parameters and truncation . . . . .	130
5.2.1. Definition of the effective modal parameters . . . . .	130
5.2.2. Summation rules . . . . .	133

5.2.2.1. Direct summation . . . . .	133
5.2.2.2. Flexibilities in the presence of rigid modes . . . . .	134
5.2.2.3. Transmissibilities and effective masses by zones . . . . .	137
5.2.2.4. Other summation rules . . . . .	139
5.2.3. Correction of the truncation effects . . . . .	140
5.3. Particular case of a statically determined structure . . . . .	143
5.3.1. Introduction . . . . .	143
5.3.2. Effective mass models . . . . .	145
5.4. Modal effective parameters and dynamic responses . . . . .	153
5.4.1. Frequency responses . . . . .	153
5.4.2. Random responses . . . . .	157
5.4.3. Time responses . . . . .	159
5.4.4. Time response extrema . . . . .	159
5.5. Industrial examples . . . . .	161
<b>Chapter 6. Continuous Systems . . . . .</b>	<b>169</b>
6.1. Introduction . . . . .	169
6.2. The rod element . . . . .	171
6.2.1. Introduction . . . . .	171
6.2.2. Clamped-free rod . . . . .	173
6.2.3. Free-free rod . . . . .	178
6.2.4. Clamped-clamped rod . . . . .	182
6.3. Bending beam element . . . . .	184
6.3.1. Introduction . . . . .	184
6.3.2. Clamped-free beam . . . . .	188
6.3.3. Free-free beam . . . . .	193
6.3.4. Clamped-clamped beam . . . . .	199
6.3.5. Shear and rotary inertia effects . . . . .	204
6.4. Plate element . . . . .	206
6.4.1. Introduction . . . . .	206
6.4.2. Some plate results in bending . . . . .	207
6.4.3. Simply supported rectangular plate . . . . .	208
6.5. Combined cases . . . . .	210
6.5.1. Introduction . . . . .	210
6.5.2. Combination rod + local mass or flexibility . . . . .	213
6.5.3. Some typical results . . . . .	215

<b>Chapter 7. Complex Modes . . . . .</b>	219
7.1. Introduction . . . . .	219
7.2. Dissipative systems . . . . .	220
7.2.1. Complex modes . . . . .	220
7.2.2. Mode superposition . . . . .	224
7.2.3. Modal effective parameters and dynamic amplifications . . . . .	226
7.2.4. Simple example . . . . .	229
7.3. Gyroscopic effects . . . . .	232
7.3.1. Introduction . . . . .	232
7.3.2. Mode superposition . . . . .	234
7.4. A more general case . . . . .	236
7.4.1. Introduction . . . . .	236
7.4.2. Complex modes . . . . .	237
7.4.3. Mode superposition . . . . .	240
7.4.4. Modal effective parameters and dynamic amplifications . . . . .	242
7.5. Applications . . . . .	245
7.5.1. Simple example . . . . .	245
7.5.2. Industrial case . . . . .	248
<b>Chapter 8. Modal Synthesis . . . . .</b>	249
8.1. Introduction . . . . .	249
8.2. General approach . . . . .	251
8.2.1. Analysis of substructures . . . . .	251
8.2.2. Coupling of substructures . . . . .	253
8.2.3. Recovery . . . . .	255
8.3. Choice of mode . . . . .	256
8.3.1. Introduction . . . . .	256
8.3.2. Boundary conditions . . . . .	258
8.3.3. Normal modes . . . . .	259
8.3.4. Static flexibilities . . . . .	260
8.3.5. Junction modes . . . . .	262
8.3.6. Illustration . . . . .	263
8.3.7. Possible combinations . . . . .	265
8.4. Some methods . . . . .	266
8.4.1. Craig-Bampton method . . . . .	266
8.4.2. Craig-Chang method . . . . .	271
8.4.3. Benfield-Hruda method . . . . .	276
8.4.4. Effective mass models . . . . .	281
8.4.5. Reduced models . . . . .	283
8.5. Case study . . . . .	287
8.5.1. Benfield-Hruda truss . . . . .	287
8.5.2. Industrial cases . . . . .	290

<b>Chapter 9. Frequency Response Synthesis . . . . .</b>	295
9.1. Introduction . . . . .	295
9.2. Frequency Response Functions . . . . .	296
9.2.1. FRF and other dynamic characteristics . . . . .	296
9.2.2. Transformation of the FRF . . . . .	298
9.2.3. Simple examples . . . . .	299
9.3. Coupling by FRF . . . . .	301
9.3.1. FRF necessary for coupling . . . . .	301
9.3.2. Solution of the coupling . . . . .	303
9.3.3. Recovery . . . . .	304
9.3.4. Summary . . . . .	305
9.4. The basic cases . . . . .	306
9.4.1. Introduction . . . . .	306
9.4.2. Free substructures at the connections . . . . .	306
9.4.3. Substructures constrained at the connections . . . . .	308
9.4.4. Mixed conditions at the connections . . . . .	309
9.5. Generalization . . . . .	310
9.5.1. Introduction . . . . .	310
9.5.2. Stiffness approach . . . . .	311
9.5.3. Flexibility approach . . . . .	312
9.5.4. Comparison of the two approaches . . . . .	314
9.5.5. Particular cases . . . . .	317
9.6. Comparison with other substructuring techniques . . . . .	318
9.6.1. The matrix level . . . . .	318
9.6.2. The modal level . . . . .	319
9.6.3. The frequency response level . . . . .	320
9.6.4. Conclusion . . . . .	321
<b>Chapter 10. Introduction to Non-linear Analysis . . . . .</b>	323
10.1. Introduction . . . . .	323
10.2. Non-linear systems . . . . .	324
10.2.1. Introduction . . . . .	324
10.2.2. Simple examples of large displacements . . . . .	326
10.2.3. Simple example of variable link . . . . .	328
10.2.4. Simple example of dry friction . . . . .	328
10.2.5. Material non-linearities . . . . .	329
10.3. Non-linear 1-DOF system . . . . .	329
10.3.1. Introduction . . . . .	329
10.3.2. Undamped motion without excitation . . . . .	331
10.3.3. Case of a stiffness of form $k(1 + \mu x^2)$ . . . . .	332
10.3.4. Undamped motion with excitation . . . . .	336

10.3.5. Damped motion with excitation. . . . .	340
10.4. Non-linear N-DOF systems . . . . .	343
10.4.1. Introduction . . . . .	343
10.4.2. Non-linear link with periodic motion . . . . .	344
10.4.3. Direct integration of equations . . . . .	346
 <b>Chapter 11. Testing Techniques</b> . . . . .	349
11.1. Introduction . . . . .	349
11.2. Dynamic tests. . . . .	350
11.2.1. Development plan of a structure . . . . .	350
11.2.2. Types of tests . . . . .	352
11.2.3. Test hardware . . . . .	353
11.3. The identification tests . . . . .	358
11.3.1. Introduction . . . . .	358
11.3.2. Modal parameters to be identified . . . . .	359
11.3.3. Phase resonance modal tests. . . . .	362
11.3.4. Phase separation modal tests . . . . .	364
11.3.5. Extraction of modal parameters. . . . .	366
11.3.6. Single DOF (SDOF) methods. . . . .	368
11.3.7. Multi-DOF (MDOF) methods. . . . .	370
11.4. Simulation tests. . . . .	372
11.4.1. Introduction . . . . .	372
11.4.2. Tests with shakers. . . . .	373
11.4.3. Shock device tests. . . . .	375
11.4.4. The tests in a reverberant acoustic chamber . . . . .	376
11.4.5. Elaboration of specifications . . . . .	377
11.4.6. Impact of a structure on its environment . . . . .	379
 <b>Chapter 12. Model Updating and Optimization</b> . . . . .	385
12.1. Introduction . . . . .	385
12.2. Sensitivity analysis. . . . .	387
12.2.1. Introduction . . . . .	387
12.2.2. Sensitivity of the natural frequencies . . . . .	388
12.2.3. Sensitivity of the eigenvectors . . . . .	388
12.2.4. Sensitivity of the modal effective parameters . . . . .	389
12.2.5. Simple example . . . . .	390
12.3. Ritz reanalysis . . . . .	392
12.3.1. Introduction . . . . .	392
12.3.2. Utilization of the normal modes . . . . .	392
12.3.3. Utilization of additional modes . . . . .	393

12.3.4. Simple example . . . . .	393
12.4. Model updating. . . . .	395
12.4.1. Physical parameters. . . . .	395
12.4.2. Test/analysis correlation . . . . .	398
12.4.3. Updating procedure . . . . .	400
12.5. Optimization processes . . . . .	401
12.5.1. Introduction . . . . .	401
12.5.2. Non-linear optimization methods. . . . .	402
12.5.3. Non-linear simplex method . . . . .	403
12.6. Applications. . . . .	404
12.6.1. Optimization of a simple system . . . . .	404
12.6.2. Updating a simple system . . . . .	405
12.6.3. Industrial case . . . . .	407
<b>Bibliography</b> . . . . .	411
<b>Index</b> . . . . .	417
