

## Table of Contents

<b>Preface . . . . .</b>	xiii
<b>Chapter 1. Electromagnetic Environment . . . . .</b>	1
Pierre-Noël FAVENNEC	
1.1. Electromagnetic radiation sources . . . . .	1
1.1.1. Optical sources . . . . .	1
1.1.2. Radioelectric sources. . . . .	7
1.1.3. Indoor and outdoor electric wires . . . . .	18
1.1.4. Fields resulting from all the emissions . . . . .	18
1.2. Electromagnetic fields . . . . .	18
1.3. Bibliography . . . . .	21
<b>Chapter 2. From Measurement to Control of Electromagnetic Waves using a Near-field Scanning Optical Microscope . . . . .</b>	23
Loïc LALOUAT, Houssein NASRALLAH, Benoit CLUZEL, Laurent SALOMON, Colette DUMAS and Frédérique DE FORNEL	
2.1. Introduction . . . . .	23
2.2. Principle of the measurement using a local probe . . . . .	24
2.2.1. Overcoming Rayleigh's limit . . . . .	24
2.2.2. Classification of the experimental set-up . . . . .	25
2.2.3. Probe motion above a sample. . . . .	26
2.2.4. Aperture microscope in collection mode under constant distance mode . . . . .	26
2.3. Measurement of the electromagnetic field distribution inside nanophotonic components . . . . .	30
2.3.1. W1 photonic crystal waveguide . . . . .	32
2.3.2. Photonic crystal microcavity . . . . .	36
2.4. Measuring the amplitude and phase in optical near-field . . . . .	39

2.5. Active optical near-field microscopy . . . . .	41
2.6. Conclusion . . . . .	45
2.7. Acknowledgements . . . . .	45
2.8. Bibliography . . . . .	45
<b>Chapter 3. Meteorological Visibility Measurement: Meteorological Optical Range . . . . .</b>	<b>51</b>
Hervé SIZUN and Maher AL NABOULSI	
3.1. Introduction . . . . .	51
3.2. Definitions . . . . .	52
3.3. Atmospheric composition . . . . .	53
3.3.1. Gaseous composition . . . . .	53
3.3.2. Aerosols . . . . .	54
3.4. Atmospheric effects on light propagation . . . . .	54
3.4.1. Atmospheric absorption . . . . .	55
3.4.2. Atmospheric scattering . . . . .	56
3.4.3. Extinction and total spectral transmission . . . . .	57
3.5. Units and scales . . . . .	57
3.6. Measurement methods . . . . .	58
3.6.1. Visual estimation of the meteorological optical range . . . . .	59
3.6.2. Meteorological optical range measurement instruments . . . . .	60
3.6.3. Exposure and implantation of instruments . . . . .	68
3.7. Visibility perturbation factors . . . . .	68
3.8. Applications . . . . .	71
3.8.1 Meteorology applications . . . . .	72
3.8.2. Aeronautic applications . . . . .	72
3.8.3. Free space optic telecommunications applications . . . . .	73
3.8.4. Automative safety applications . . . . .	74
3.9. Appendix – optical contrast and Koschmieder’s law . . . . .	75
3.10. Glossary . . . . .	77
3.11. Bibliography . . . . .	78
<b>Chapter 4. Low Coherence Interferometry . . . . .</b>	<b>81</b>
Xavier CHAPELEAU, Dominique LEDUC, Cyril LUPI, Virginie GAILLARD and Christian BOISROBERT	
4.1. Introduction . . . . .	81
4.2. Phase measurement . . . . .	82
4.2.1. Low coherence interferometry . . . . .	83
4.2.2. Optical frequency domain reflectometry (OFDR) . . . . .	85
4.3. Metrology considerations . . . . .	86
4.3.1. Wavelength . . . . .	86
4.3.2. Relative group delay . . . . .	88

4.3.3. Chromatic dispersion . . . . .	89
4.4. Applications . . . . .	91
4.4.1. Characterization of photonic crystal fibers . . . . .	91
4.4.2. Amplifying fiber characterization . . . . .	93
4.4.3. Local characterization of fiber Bragg gratings . . . . .	96
4.4.4. Strain and temperature sensors . . . . .	101
4.5. Conclusion . . . . .	106
4.6. Bibliography . . . . .	107
<b>Chapter 5. Passive Remote Sensing at Submillimeter Wavelengths and THz</b> . . . . .	113
Gérard BEAUDIN	
5.1. Introduction . . . . .	113
5.1.1. Earth atmosphere and the radioelectric spectrum . . . . .	114
5.1.2. Application fields of heterodyne detection . . . . .	114
5.2. Submillimeter-THz low noise heterodyne receivers . . . . .	115
5.2.1. Mixers with AsGa Schottky diodes . . . . .	115
5.2.2. Mixers with superconductors (SIS, HEB) . . . . .	117
5.2.3. Local oscillator sources . . . . .	118
5.3. Submillimeter – THz applications for astronomy and astrophysics . . . . .	120
5.3.1. Airborne or stratospheric balloon observatories . . . . .	120
5.3.2. Space observatories . . . . .	121
5.4. Submillimeter – THz remote-sensing applications to aeronomy and planetology . . . . .	124
5.4.1. Atmospheric sounders . . . . .	125
5.4.2. Cometary and planetary probes . . . . .	125
5.5. Conclusion . . . . .	126
5.6. Acknowledgements . . . . .	127
5.7. Bibliography . . . . .	127
<b>Chapter 6. Exposimetry – Measurements of the Ambient RF Electromagnetic Fields</b> . . . . .	131
Pierre-Noël FAVENNEC	
6.1. Introduction . . . . .	131
6.2. Definitions . . . . .	132
6.3. Interactions of the electromagnetic fields with biological tissues and medical risks . . . . .	136
6.3.1. What are the effects of the electromagnetic fields and waves on human health? . . . . .	136
6.3.2. Duality wave-photon: remarks on activation energies . . . . .	136
6.3.3. RF fields are non-ionizing . . . . .	137

viii Measurements using Optic and RF Waves

6.3.4. Biological effects of the electromagnetic field . . . . .	138
6.3.5. Possible mechanisms . . . . .	140
6.4. Exposure limit values . . . . .	141
6.5. Electromagnetic environment to be measured . . . . .	146
6.5.1. Why is knowledge of our electromagnetic environment important? . . . . .	146
6.5.2. What do we have to measure? . . . . .	147
6.5.3. Parameters and configurations to be considered . . . . .	148
6.5.4. <i>A priori</i> evaluation of the fields . . . . .	149
6.6. Measurement equipment . . . . .	150
6.6.1. Measurement line . . . . .	150
6.6.2. Devices measuring RF field intensity . . . . .	152
6.6.3. Sensors and detectors . . . . .	155
6.7. Measurements . . . . .	159
6.7.1. Measures to the static field . . . . .	159
6.7.2. ELF field measurements . . . . .	160
6.7.3. RF and UHF field measurements . . . . .	161
6.7.4. <i>In situ</i> measurements and total electric field . . . . .	163
6.7.5. Calibration . . . . .	164
6.7.6. Evaluation of measurement uncertainties . . . . .	165
6.7.7. SAR and its determination . . . . .	168
6.7.8. Measurement techniques for electromagnetic compatibility (CEM) in the field of RF . . . . .	170
6.7.9. Measurements for WiFi (IEEE 802.11) technologies . . . . .	172
6.7.10. Field measurements in mobility situations . . . . .	173
6.8. Control stations and uninterrupted electromagnetic measurements: towards a 3D electromagnetic land register . . . . .	175
6.9. Appendix 1 – some field measurements . . . . .	176
6.10. Appendix 2 – principal characteristics of mobile communication systems . . . . .	177
6.11. Bibliography . . . . .	177
<b>Chapter 7. Ambient RF Electromagnetic Measurements in a Rural Environment . . . . .</b>	<b>181</b>
Hervé SIZUN and Philippe MALIET	
7.1. Introduction . . . . .	181
7.2. Measurement set-up . . . . .	182
7.3. Operating mode . . . . .	184
7.4. Different studies . . . . .	185
7.4.1. Study of the 20-220 MHz band . . . . .	185
7.4.2. Study of the 200-1,200 MHz band . . . . .	185
7.4.3. Study of the 1-3 GHz band . . . . .	185

7.5. Measurements results . . . . .	186
7.6. Electrical field strength . . . . .	188
7.7. Conclusion . . . . .	189
7.8. Acknowledgements . . . . .	189
7.9. Bibliography . . . . .	189
<b>Chapter 8. Radio Mobile Measurement Techniques . . . . .</b>	<b>191</b>
Hervé SIZUN	
8.1. Introduction . . . . .	191
8.2. Field strength measurements . . . . .	192
8.3. Measurement of the impulse response . . . . .	195
8.4. Measurement of directions of arrival . . . . .	198
8.4.1. Mathematical modeling of the signal . . . . .	200
8.4.2. Determination methods of the directions of arrival . . . . .	202
8.5. WiFi measurements in a home environment (field strength, data rate) .	216
8.5.1. Experimental set-up . . . . .	217
8.5.2. “Berlioz” site . . . . .	219
8.5.3. Electrical field strength measurements . . . . .	219
8.5.4. Data rate measurements . . . . .	220
8.6. Conclusion . . . . .	222
8.7. Glossary . . . . .	224
8.8. Acknowledgments . . . . .	225
8.9. Bibliography . . . . .	225
<b>Chapter 9. Dosimetry of Interactions Between the Radioelectric Waves and Human Tissues – Hybrid Approach of the Metrology . . . . .</b>	<b>229</b>
Joe WIART and Man Faï WONG	
9.1. Introduction . . . . .	229
9.2. Evaluation of the power absorber for the tissues . . . . .	230
9.3. Experimental evaluation of the specific absorption rate (SAR) .	232
9.4. SAR evaluation in biological tissues . . . . .	235
9.4.1. DAS evaluation by numerical methods . . . . .	235
9.4.2. Biological tissues modeling . . . . .	237
9.4.3. Source modeling . . . . .	239
9.4.4. Absorbed power in the tissue distribution . . . . .	242
9.5. Variability, representativeness and uncertainty . . . . .	242
9.6. Conclusions . . . . .	245
9.7. Bibliography . . . . .	246

<b>Chapter 10. Measurement for the Evaluation of Electromagnetic Compatibility . . . . .</b>	<b>249</b>
Philippe BESNIER, Christophe LEMOINE and Mohammed SERHIR	
10.1. Introduction . . . . .	249
10.2. General aspects of EMC measurement . . . . .	250
10.3. Emissivity and radiated immunity testing . . . . .	253
10.3.1. TEM and GTEM cells . . . . .	254
10.3.2. Measurements in an anechoic chamber . . . . .	255
10.3.3. The main principles behind radiated emissivity testing . . . . .	256
10.3.4. The main principles behind radiated immunity testing . . . . .	259
10.4. Efficiency and limitations of EMC measurement techniques . . . . .	261
10.5. Mode-stirred reverberation chambers . . . . .	262
10.5.1. The principles of reverberation . . . . .	262
10.5.2. Tests in an anechoic chamber and in a reverberation chamber . . . . .	266
10.5.3. Recent and future applications for reverberation chambers . . . . .	267
10.6. Electromagnetic near-field measurement techniques applied to EMC . . . . .	268
10.6.1. Near-field techniques in a Rayleigh zone . . . . .	268
10.6.2. Near-field techniques outside the Rayleigh zone . . . . .	269
10.7. Conclusions and future prospects . . . . .	272
10.8. Bibliography . . . . .	272
<b>Chapter 11. High Precision Pulsar Timing in Centrimetric Radioastronomy . . . . .</b>	<b>277</b>
Ismaël COGNARD	
11.1. Introduction . . . . .	277
11.2. Ultra-stable clocks to the limits of the Galaxy . . . . .	277
11.3. Dispersion by the interstellar medium . . . . .	280
11.4. Instrumentation used to study pulsars . . . . .	281
11.5. Swept local oscillator dedispersion . . . . .	282
11.6. Filterbank dedispersion . . . . .	283
11.7. Real-time coherent dedispersion . . . . .	284
11.8. The coherent pulsar instrumentation installed at Nançay . . . . .	285
11.9. Conclusion . . . . .	288
11.10. Bibliography . . . . .	289
<b>Chapter 12. Long Baseline Decameter Interferometry between Nançay and LOFAR . . . . .</b>	<b>291</b>
Philippe ZARKA	
12.1. Introduction . . . . .	291
12.2. Observations . . . . .	293

Table of Contents xi

12.3. Analysis . . . . .	297
12.4. Conclusions and perspectives . . . . .	303
12.5. Acknowledgements . . . . .	305
12.6. Bibliography . . . . .	305
<b>List of Authors . . . . .</b>	<b>307</b>
<b>Index . . . . .</b>	<b>311</b>
