Table of Contents

Preface xvii

Chapter 1. Interdisciplinary Mechatronics Engineering Science and the Evolution of Human Friendly and Adaptive Mechatronics 1
Maki K. HABIB

1.1. Introduction. 2
1.2. Synergetic thinking, learning and innovation in mechatronics design 9
1.3. Human adaptive and friendly mechatronics. 11
1.4. Conclusions. 14
1.5. Bibliography 15

Chapter 2. Micro-Nanomechatronics for Biological Cell Analysis and Assembly 19
Toshio FUKUDA, Masahiro NAKAJIMA, Masaru TAKEUCHI, Tao YUE and Hirotaka TAJIMA

2.1. Introduction of micro-nanomechatronics on biomedical fields 19
2.2. Configuration of micro-nanomechatronics 21
2.3. Micro-nanomechatronics for single cell analysis. 25
2.4. Semi-closed microchip for single cell analysis 28
2.5. Biological cell assembly using photo-linkable resin based on the single cell analysis techniques 30
2.6. Conclusion 33
2.7. Acknowledgments. 34
2.8. Bibliography 34

Chapter 3. Biologically Inspired CPG-Based Locomotion Control System of a Biped Robot Using Nonlinear Oscillators with Phase Resetting 37
Shinya AOI

3.1. Introduction. 37
3.2. Locomotion control system using nonlinear oscillators 38
3.2.1. CPG-based locomotion control system 38
3.2.2. Rhythm generator model using nonlinear oscillators 39
3.2.3. Pattern formation model to determine the global parameters of limb kinematics 40
3.2.4. Phase regulation based on interlimb and intralimb coordination . . 40
3.2.5. Sensory regulation based on phase resetting 40
3.3. Stability analysis using a simple biped robot model 41
3.3.1. Compass model 41
3.3.2. Locomotion control system 43
3.3.3. Periodic solution of the walking motion 45
3.3.4. Stability analysis 49
3.4. Experiment using biped robots 58
3.4.1. Locomotion control system 58
3.4.2. Experimental results 61
3.5. Conclusion 64
3.6. Acknowledgments. 65
3.7. Bibliography 65

Chapter 4. Modeling a Human's Learning Processes toward Continuous Learning Support System 69
Tomohiro YAMAGUCHI, Kouki TAKEMORI and Keiki TAKADAMA

4.1. Introduction. 70
4.1.1. The need for continuous learning in mechatronics engineering. . . 70
4.1.2. Learning support systems for a human 70
4.1.3. Modeling a learning process to achieve continuous learning 71
4.1.4. How to keep supplying new goals to achieve continuous learning 73
4.1.5. The concept to formalize the continuous learning by a maze model 75
4.2. Designing the continuous learning by a maze model 76
4.2.1. A learning environment by a maze model with invisible goals . . . 76
4.2.2. The maze sweeping task that involves multiple goals 78
4.2.3. Designing the thinking level 81
4.3. The layout design of mazes for the continuous learning task. 82
4.3.1. Overview of the continuous learning support system. 82
4.3.2. The layout design of mazes on the thinking level space 83

4.4. Experiment 85
4.4.1. Experimental setup 85
4.4.2. Experimental results 87
4.5. Discussions 88
4.5.1. The role of motivations to drive the continuous learning 88
4.5.2. Why is it important to collect all solutions for continuous learning? 89
4.5.3. Toward an application of a maze model and invisible goals. 90
4.6. Conclusions. 92
4.7. Acknowledgments 93
4.8. Bibliography 93

Chapter 5. PWM Waveform Generation Using Pulse-Type Hardware Neural Networks 95
Ken SAITO, Minami TAKATO, Yoshifumi SEKINE and Fumio UCHIKOBA

5.1. Introduction. 96
5.2. PWM servo motor 97
5.3. Pulse-type hardware neuron model 99
5.3.1. Basic cell body model 99
5.3.2. Cell body model for PWM controlling system. 101
5.3.3. Synaptic model 103
5.3.4. Axon model 104
5.4. Pulse-type hardware neural networks 104
5.5. Measurements of constructed discrete circuit 108
5.6. Conclusion 109
5.7. Acknowledgments 109
5.8. Bibliography 110

Chapter 6. Parallel Wrists: Limb Types, Singularities and New Perspectives 113
Raffaele DI GREGORIO

6.1. Limb architectures and mobility analysis 113
6.1.1. Use of the screw theory 115
6.1.2. Use of the group theory 120
6.1.3. Other approaches 122
6.1.4. Conclusion 124
6.2. Singularities and performance indices 124
6.2.1. Singularity analysis of PWs 126
6.2.2. Kinetostatic performances. 131
6.2.3. Conclusion 138
6.3. New perspectives 139
6.4. Bibliography 142

Chapter 7. A Robot-Assisted Rehabilitation System – RehabRoby 145
Duygun EROL BARKANA and Fatih ÖZKUL

7.1. Introduction. 145
7.2. Background. 146
7.2.1. Robot-assisted rehabilitation systems for upper extremities. 146
7.2.2. Controllers of robot-assisted rehabilitation systems for upper extremities 148
7.3. Control architecture 149
7.4. RehabRoby 150
7.5. Controllers of RehabRoby 155
7.5.1. Low-level controller 156
7.5.2. High-level controller 157
7.6. Concluding remarks. 158
7.7. Acknowledgments. 159
7.8. Bibliography 159

Chapter 8. MIMO Actuator Force Control of a Parallel Robot for Ankle Rehabilitation. 163
Andrew MCDAID, Yun HO TSOI and Shengquan XIE

8.1. Introduction. 163
8.1.1. Rehabilitation robots 164
8.1.2. Ankle sprain rehabilitation 165
8.2. Ankle rehabilitation robot 167
8.2.1. Design requirements 168
8.2.2. Analysis for four-link parallel mechanism 171
8.2.3. System description 175
8.3. Actuator force control. 176
8.3.1. Actuator force control by decoupling of inertia matrix. 177
8.3.2. Higher order dynamic model of actuator–sensor–environment system 182
8.3.3. State space model of the linearized actuator–sensor–environment system 187
8.3.4. Proposed actuator force controller 195
8.4. Experimental results. 198
8.4.1. Stability experiment 198
8.4.2. Experiments for performance evaluation 200
8.5. Concluding remarks. 204
8.6. Bibliography 205

Chapter 9. Performance Evaluation of a Probe Climber for Maintaining Wire Rope 209
Akihisa TABATA, Emiko HARA and Yoshio AOKI

9.1. Introduction. 209
9.2. Optimize friction drive conditions using a prototype probe climber 210
9.3. Impact of different surface friction materials for friction pulley made on elevation performance 213
9.4. Damage detection test of elevator wire rope 216
9.5. Damage detection through signal processing 218
9.6. Integrity evaluation of wire rope through MFL strength 219
9.7. Damage detection of wire rope using neural networks 224
9.8. Conclusion 224
9.9. Bibliography 225

Chapter 10. Fundamentals on the Use of Shape Memory Alloys in Soft Robotics. 227
Matteo CIANCHETTI

10.1. Introduction 228
10.2. Shape memory effect and superelastic effect 230
10.3. SMA thermomechanical behavior. 231
10.4. SMA constitutive models. 234
10.5. Hints on SMA thermomechanical testing 235
10.6. Design principles. 237
10.6.1. Geometrical choice 237
10.6.2. One-way or two-way memory effect. 240
10.6.3. Restoring force 240
10.6.4. Anchor points 241
10.7. Fabrication methods 243
10.8. Activation methods and control design. 244
10.8.1. On-off activation in open-loop control 246
10.8.2. Modulated activation in closed-loop control 247
10.9. Applications in Soft Robotics 248
10.10. Conclusions 251
10.11. Bibliography. 252

Chapter 11. Tuned Modified Transpose Jacobian Control of Robotic Systems 255
S. A. A. MOOSAVIAN and M. KARIMI

11.1. Introduction 256
11.2. TMTJ control law 257
11.2.1. Feedback linearization approach 257

11.2.2. Transpose Jacobian algorithm . . . 259
11.2.3. Modified transpose Jacobian algorithm . . . 259
11.2.4. Tuned modified transpose Jacobian algorithm . . . 261
11.3. Obtained results and discussions . . . 265
11.3.1. Fixed base manipulator . . . 265
11.3.2. Mobile base manipulator . . . 269
11.4. Conclusions . . . 272
11.5. Bibliography . . . 273

Chapter 12. Derivative-Free Nonlinear Kalman Filtering for PMSG Sensorless Control . . . 277
Gerasimos RIGATOS, Pierluigi SIANO and Nikolaos ZERVOS

12.1. Introduction . . . 277
12.2. Dynamic model of the permanent magnet synchronous generator . . . 279
12.3. Lie algebra-based design of nonlinear state estimators . . . 282
12.3.1. Relative degree for nonlinear systems . . . 282
12.3.2. Nonlinear observer design for exactly linearizable systems . . . 283
12.3.3. Linearization of PMSG dynamics using Lie Algebra . . . 287
12.4. Differential flatness for nonlinear dynamical systems . . . 288
12.4.1. Definition of differentially flat systems . . . 288
12.4.2. Classes of differentially flat systems . . . 291
12.4.3. Differential flatness and transformation into the canonical form . . . 292
12.5. Differential flatness of the PMSG . . . 293
12.6. Robust state estimation-based control of the PMSG . . . 296
12.6.1. Unknown input observers . . . 296
12.6.2. Perturbation observer . . . 296
12.6.3. Extended state observer . . . 297
12.7. Estimation of PMSG disturbance input with Kalman filtering . . . 298
12.7.1. State estimation with the derivative-free nonlinear Kalman filter . . . 298
12.7.2. Kalman filter-based estimation of disturbances . . . 299
12.8. Simulation experiments . . . 302
12.9. Conclusions . . . 307
12.10. Bibliography . . . 308

Chapter 13. Construction and Control of Parallel Robots . . . 313
Moharam HABIBNEJAD KORAYEM, Soleiman MANTEGHI and Hami TOURAJIZADEH

13.1. Introduction . . . 313
13.2. A parallel robot mechanism . . . 315

13.2.1. Mechanical structure 316
13.2.2. Modeling and Formulation 319
13.3. Actuators 324
13.3.1. Motor 324
13.3.2. Cables 327
13.4. Sensors 328
13.4.1. Motor speed sensor 328
13.4.2. Force sensor 330
13.4.3. Position sensor 334
13.5. Data transfer protocol 342
13.6. Graphical user interface (GUI) 347
13.6.1. Simulator and virtual laboratory 347
13.6.2. Hardware control 352
13.7. Result and verifications 357
13.8. Conclusion 362
13.9. Bibliography 364

Chapter 14. A Localization System for Mobile Robot Using Scanning Laser and Ultrasonic Measurement 369
Kai LIU, Hongbo LI and Zengqi SUN

14.1. Introduction 369
14.2. System configuration 371
14.3. Implementation 373
14.3.1. Dead reckoning system 373
14.3.2. Scanning laser and ultrasonic positioning system 375
14.4. Experimental results 377
14.5. Conclusion 382
14.6. Acknowledgments 383
14.7. Bibliography 383

Chapter 15. Building of Open-Structure Wheel-Based Mobile Robotic Platform 385
Aleksandar RODIĆ and Ivan STOJKOVIĆ

15.1. Introduction 385
15.2. State of the art 386
15.3. Configuring of the experimental system 389
15.3.1. Wheel-based mobile robot 390
15.3.2. System for localization and obstacle detection 390
15.3.3. Architecture of the on-board controller 391
15.4. Modeling and simulation of the system 394
15.4.1. Kinematical model 395
15.4.2. Model of robot dynamics 397

15.5. Motion planning and control 403
15.5.1. Motion planning 403
15.5.2. Motion control 406
15.6. Simulation and experimental testing 409
15.6.1. Case studies 411
15.7. Concluding remarks 416
15.8. Acknowledgments 417
15.9. Bibliography 417
15.10. Appendix 421

Chapter 16. Design and Physical Implementation of Holonomous Mobile Robot – Holbos 423
Jasmin VELAGIC, Admir KAKNJO, Faruk DAUTOVIC, Muhidin HUJDUR and Nedim OSMIC

16.1. Introduction 423
16.2. Locomotion of holonomous mobile robot 424
16.2.1. Kinematic model of robot 426
16.3. Mechanical design 430
16.4. Electrical design 431
16.4.1. Hardware components and software implementation 431
16.5. Results 444
16.6. Conclusion 447
16.7. Bibliography 448

Chapter 17. Advanced Artificial Vision and Mobile Devices for New Applications in Learning, Entertainment and Cultural Heritage Domains 451
Gian Luca FORESTI, Niki MARTINEL, Christian MICHELONI and MARCO VERNIER

17.1. Introduction 451
17.2. Chapter contributions 455
17.3. Mobile devices for education purposes 456
17.3.1. Mobile learning for education 457
17.3.2. Mobile learning for museums and galleries 459
17.3.3. Mobile learning for workplace, professional development and training 460
17.4. Image processing supports HCI in museum application 461
17.4.1. System description 463
17.4.2. Boundary detector 463
17.4.3. Signature computation 464
17.4.4. Signature matching 466

17.4.5. Homography estimation 467
17.4.6. Human device interface 467
17.4.7. Experimental results 468
17.5. Back to the Future: a 3D image gallery. 471
17.5.1. System description 473
17.5.2. Testing and evaluations 475
17.6. Conclusions and future works 477
17.7. Bibliography 477

Chapter 18. Application of Stereo Vision and ARM Processor for Motion Control 483
Moharam HABIBNEJAD KORAYEM, Michal IRANI and Saeed RAFEE NEKOO

18.1. Introduction 483
18.2. Stereo vision 486
18.3. Triangulation 487
18.4. End-effector orientation. 490
18.5. Experimental setup and results. 492
18.6. Summary 497
18.7. Bibliography 498

Chapter 19. Mechatronics as Science and Engineering – or Both 501
Balan PILLAI and Vesa SALMINEN

19.1. Introduction 501
19.2. Theories and methods of design, planning and manufacturing 504
19.3. Complexity versus complicatedness 506
19.4. Benefits of fast product developments 513
19.5. Nature of product development process 516
19.6. Planning the timetable of a product design project 518
19.7. Designing the product concept. 520
19.8. Enhancing conceptual design 520
19.9. Interaction between the parts of the machine 523
19.10. Effect of the strength of interaction between product parts and development speed 524
19.11. Definition of product and service 527
19.12. The case studies. 529
19.13. Networking systems and learning mechanism 531
19.14. Model-based methodology: an implemented case. 536
19.15. Conclusions 540
19.16. Bibliography. 541

Chapter 20. A Mechatronic Platform for Robotic Educational Activities 543
Ioannis KOSTAVELIS, Evangelos BOUKAS, Lazaros NALPANTIDIS and Antonios GASTERATOS

20.1. Introduction 543
20.2. System overview 545
20.2.1. Architectural design 546
20.2.2. Subsystem equipment 547
20.2.3. Robot montage. 553
20.3. Educational activities 554
20.3.1. 3D reconstruction 554
20.3.2. Visual odometry 556
20.3.3. Visual SLAM 558
20.3.4. Human tracking using RGB-D sensor 558
20.3.5. Hardware acceleration 559
20.3.6. Sensor fusion algorithms. 560
20.3.7. User interfaces 560
20.4. Experiences from educational activities 561
20.5. Conclusions 565
20.6. Acknowledgments 565
20.7. Bibliography 566

Chapter 21. The Importance of Practical Activities in the Formation of Mechatronic Engineers 569
João Carlos M. CARVALHO and Vera Lúcia D.S. FRANCO

21.1. Introduction 569
21.2. Curricular and extracurricular practical activities. 575
21.2.1. Practical laboratory activities 576
21.2.2. Monitoring 577
21.2.3. Research initiation activities. 577
21.2.4. Participation in Junior Companies 577
21.2.5. Academic mobility 578
21.2.6. Participation in competition teams 579
21.2.7. Participation in student directories 579
21.2.8. Participation and organization of events. 580
21.3. Undergraduate course of Mechatronics Engineering at the Federal University of Uberlândia/Brazil 580
21.3.1. Practices activities of laboratory 581
21.3.2. Monitoring 583
21.3.3. Research initiation activities. 583
21.3.4. Participation in Junior Companies 584
21.3.5. Academic mobility 584

21.3.6. Participation in competition teams 585
21.3.7. Participation in student directories 587
21.3.8. Participation and organization of events. 587
21.3.9. Other activities. 587
21.4. Discussions 588
21.5. Conclusions 590
21.6. Bibliography 591

List of Authors 593

Index 599
