Foreword	9
Chapter 1. Introduction	13
Serge HADDAD, Fabrice KORDON, Laurent PAUTET and Laure PETRUCCI	
FIRST PART. LARGE SCALE PEER-TO-PEER DISTRIBUTED SYSTEMS . .	19
Chapter 2. Introduction to Large-Scale Peer-to-Peer Distributed Systems	21
Fabrice KORDON	
2.1. “Large-Scale” distributed systems?	21
2.2. Consequences of “large-scale”	22
2.3. Some large-scale distributed systems	23
2.4. Architectures of large scale distributed systems	26
2.5. Objective of Part 1	30
2.6. Bibliography	31
Chapter 3. Design Principles of Large-Scale Distributed System	33
Xavier BONNAIRE and Pierre SENS	
3.1. Introduction to peer-to-peer systems	33
3.2. The peer-to-peer paradigms	34
3.3. Services on structured overlays	41
3.4. Building trust in P2P systems	43
3.5. Conclusion	52
3.6. Bibliography	53
Chapter 4. Peer-to-Peer Storage	59
Olivier MARIN, Sébastien MONNET and Gaël THOMAS	
4.1. Introduction	59

6 Distributed Systems

4.2. BitTorrent	60
4.3. Gnutella	66
4.4. Conclusion	79
4.5. Bibliography	79
Chapter 5. Large-Scale Peer-to-Peer Game Applications	81
Sébastien MONNET and Gaël THOMAS	
5.1. Introduction	81
5.2. Large-scale game applications: model and specific requirements	83
5.3. Overview of peer-to-peer overlays for large-scale game applications	90
5.4. Overlays for FPS games	93
5.5. Overlays for online life-simulation games	95
5.6. Conclusion	100
5.7. Bibliography	101
SECOND PART. DISTRIBUTED, EMBEDDED AND REAL-TIME SYSTEMS	105
Chapter 6. Introduction to Distributed Embedded and Real-time Systems	107
Laurent PAUTET	
6.1. Distributed real-time embedded systems	108
6.2. Safety critical systems as examples of DRE systems	109
6.3. Design process of DRE systems	112
6.4. Objectives of Part 2	114
6.5. Bibliography	115
Chapter 7. Scheduling in Distributed Real-Time Systems	117
Emmanuel GROLLEAU, Michaël RICHARD, and Pascal RICHARD	
7.1. Introduction	117
7.2. Generalities about real-time systems	118
7.3. Temporal correctness	122
7.4. WCRT of the tasks	126
7.5. WCRT of the messages	142
7.6. Case study	149
7.7. Conclusion	154
7.8. Bibliography	155
Chapter 8. Software Engineering for Adaptative Embedded Systems	159
Etienne BORDE	
8.1. Introduction	159
8.2. Adaptation, an additional complexity factor	160
8.3. Theoretical aspects of adaptation management	163

8.4. Technical solutions for the design of adaptative embedded systems . . .	171
8.5. An example of adaptative system from the robotic domain	176
8.6. Applying MDE techniques to the design of the robotic use-case	177
8.7. Exploitation of the models	184
8.8. Conclusion	188
8.9. Bibliography	189
Chapter 9. The Design of Aerospace Systems	191
Maxime PERROTIN, Julien DELANGE, and Jérôme HUGUES	
9.1. Introduction	191
9.2. Flight software typical architecture	193
9.3. Traditional development methods and their limits	195
9.4. Modeling a software system using TASTE: philosophy	197
9.5. Common solutions	199
9.6. What TASTE specifically proposes	200
9.7. Modeling process and tools	201
9.8. Technology	208
9.9. Model transformations	209
9.10. The TASTE run-time	213
9.11. Illustrating our process by designing heterogeneous systems	215
9.12. First user feedback and TASTE future	224
9.13. Conclusion	225
9.14. Bibliography	226
THIRD PART. SECURITY IN DISTRIBUTED SYSTEMS	229
Chapter 10. Introduction to Security Issues in Distributed Systems	231
Laure PETRUCCI	
10.1. Problem	231
10.2. Secure data exchange	233
10.3. Security in specific distributed systems	234
10.4. Outline of Part III	234
10.5. Bibliography	235
Chapter 11. Practical Security in Distributed Systems	237
Benoît BERTHOLON, Christophe CÉRIN, Camille COTI, Jean-Christophe DUBACQ and Sébastien VARRETTE	
11.1. Introduction	237
11.2. Confidentiality	249
11.3. Authentication	252
11.4. Availability and fault tolerance	261
11.5. Ensuring resource security	278

8 Distributed Systems

11.6. Result checking in distributed computations	283
11.7. Conclusion	291
11.8. Bibliography	292
Chapter 12. Enforcing Security with Cryptography	301
Sami HARARI and Laurent POINSOT	
12.1. Introduction	301
12.2. Cryptography: from a general perspective	303
12.3. Symmetric encryption schemes	308
12.4. Prime numbers and public key cryptography	324
12.5. Conclusion	328
12.6. Bibliography	329
List of Authors	331
Index	333
