Chapter 1. Principles, Issues and Viewpoints of Traveler Information in a Multimodal Context	1
Guillaume USTER	
1.1. Introduction	1
1.2. A complexity that must be mastered	2
1.3. Multimodal information	5
1.4. The viatic concept: accompany the traveler	8
1.5. Other traveler information-based representative research projects in a multimodal context	10
1.5.1. Traveler information and valorization of route time	11
1.5.2. Traveler information and personalized accompaniment	11
1.5.3. Traveler information and ergonomics	13
1.5.4. Traveler information and intelligent agents	13
1.5.5. Traveler information and adjustment to cognitive abilities and the situation of mobility	14
1.5.6. Traveler information applied to the bicycle mode	15
1.6. Viewpoints	16
1.7. Bibliography	17
Chapter 2. User Needs Analysis Methodology for the Design of Traveler Information Systems	21
Pierre MORIZET-MAHOUDEAUX, Annette VALENTIN and Assia MOULOUDI	
2.1. Introduction	21
2.2. Traveler information: a pluridisciplinary matter	22

2.3. The example of the P@ss-ITS project	23
2.4. RAMSES methodology for the collection, analysis and modeling of user needs	24
2.4.1. Information flows in RAMSES.	24
2.4.2. Generic diagram of information flow	26
2.4.3. The steps in RAMSES	27
2.5. RAMSES in the context of the P@ss-ITS project	35
2.5.1. The preparation of collections	36
2.5.2. The methodology of data collection	37
2.5.3. The analysis of collections	38
2.5.4. The definition and evaluation of new services	41
2.5.5. Modeling and specification based on P@ss-ITS data.	43
2.5.6. MASSIV	44
2.6. Conclusion	45
2.7. Bibliography	46
Chapter 3. A Generic Method for Personalizing Interactive Systems: Application to Traveler Information	51
Mourad ABED, Abdouroihamane ANLI, Christophe KOLSKI and Emmanuelle GRISLIN	
3.1. Introduction	51
3.2. Personalization in HCI: examples of existing approaches, at the origin of the approach proposed.	52
3.3. PerMet: method for the development of personalized information systems	57
3.3.1. Analysis of the service.	58
3.3.2. Design of the service	59
3.3.3. Implementation of the service	59
3.3.4. Analysis of agents	60
3.3.5. Design of agent behaviors.	61
3.3.6. Implementation of agent behaviors	61
3.3.7. Integration	61
3.3.8. Evaluations	61
3.4. PerSyst: personalization system supporting the PerMet method.	62
3.4.1. General architecture and design of PerSyst.	62
3.4.2. The coordination agent.	63
3.4.3. The communication agent.	64
3.4.4. Administration agent.	65
3.5. Application to the public transport of people: itinerary search.	65
3.5.1. Scenario	66
3.5.2. Analysis of the personalized transport service	67
3.5.3. Design of the personalized service.	72

3.5.4. Implementation of the personalized service	73
3.5.5. Analysis of constitutive agents of the personalized system	74
3.5.6. Design of agent behaviors	78
3.5.7. Implementation of the agent behaviors	80
3.5.8. Integration	80
3.5.9. Evaluations	81
3.6. Discussion about the possibility of generalization relative to personalization	84
3.7. Conclusion	86
3.8. Bibliography	87
Chapter 4. A Formal Framework for Design and Validation of Multimodal Interactive Systems in Transport Domain	93
Linda MOHAND OUSSAÏD, Nadjet KAMEL, Idir AÏT SADOUNE, Yamine AÏT AMEUR, Mohamed AHMED NACER	
4.1. Introduction.	93
4.2. Concepts of multimodality.	94
4.2.1. Types of multimodality: CASE space	96
4.2.2. The CARE properties	97
4.3. Formal design	97
4.3.1. Formal models	98
4.3.2. Formal verification	99
4.4. Use of formal methods for input multimodality	100
4.4.1. Existing models	100
4.4.2. A general formal model for input multimodality	101
4.4.3. Verified properties	105
4.4.4. Case study	107
4.5. Use of formal methods for output multimodality	109
4.5.1. Existing models	109
4.5.2. Formal model	112
4.5.3. Case study	122
4.6. Conclusion	124
4.7. Bibliography	125
Chapter 5. From Human-machine Interaction to Cooperation: Towards the Integrated Copilot	129
Thierry BELLET, Jean-Michel HOC, Serge BOVERIE and Guy BOY	
5.1. Introduction.	129
5.2. Copiloting and human-machine cooperation: context and stakes for the automobile	131
5.3. Three realizations of cooperative devices for the purposes of automobile copiloting.	135

5.3.1. Preventing collision risks	135
5.3.2. Lateral control and securing a trajectory	141
5.3.3. Prevent driver failures	143
5.4. Discussion: towards an “intelligent” and “integrated” copilot	146
5.5. Conclusion	150
5.6. Acknowledgements	151
5.7. Bibliography	152
Chapter 6. ICT and New Human-machine Interactions for Trucks and Buses of the Future: e-Truck and e-Bus Perspectives	157
Bertrand DAVID, René CHALON and Bernard FAVRE	
6.1. Introduction.	157
6.2. Trucks in the context of ICT.	159
6.3. Informational context of the truck	160
6.4. Bus in the context of ICT.	161
6.5. Principles of IMERA and HMTD.	163
6.6. RAE (real augmented environment) for e-Trucks and e-Buses	163
6.7. HMI (Human-Machine Interface) needs for the e-Truck and e-Bus.	165
6.7.1. HMI of driving activity	165
6.7.2. Wearable HMI in mobility situations	166
6.8. <i>Mobile Learning</i> from e-Truck and e-Bus perspectives	168
6.8.1. Non-situated Mobile learning.	169
6.8.2. Situated M-Learning: from maintenance to e-maintenance	169
6.9. ICT in city delivery	171
6.10. ICT in the dynamic management of road networks.	178
6.10.1. System perspective	181
6.10.2. HMI perspective.	183
6.11. Examples of initiatives and projects in direct or indirect link with the e-Truck and e-Bus concepts	183
6.11.1. LUTB and i-Trans competitiveness clusters	183
6.11.2. Examples of European projects linked to the e-Bus and e-Truck issues	184
6.11.3. Examples of projects specific to Renault Trucks.	190
6.12. Conclusion	196
6.13. Bibliography	198
Chapter 7. User-centered Approach to Design an Adaptive Truck Driving Assistance: Detection of Vulnerable Users in Urban Areas	203
Annick MAINCENT, H�el�ene TATTEGRAIN, Marie-Pierre BRUYAS and Arnaud BONNARD	
7.1. Introduction.	203
7.2. Methodological principles for an anthropocentric design.	205

7.2.1. New assistance technologies and the driving of an industrial vehicle	205
7.2.2. The user-centered design approach	206
7.3. Contextual analyses in natural situations	209
7.3.1. Analysis of the activity of driver-deliverers	210
7.3.2. Behaviors and risk taking of vulnerable users that cause critical situations.	212
7.4. Specification of the assistance.	214
7.4.1. Identification of cases of use	214
7.4.2. Specifications of assistance strategies.	215
7.4.3. Specifications of the human-machine interface (HMI).	216
7.5. Development and integration of assistance solutions on a driving simulator	218
7.5.1. Implementation of the user-centered design approach	218
7.5.2. Description of an adaptive solution	220
7.6. Evaluation of solutions on a driving simulator	224
7.6.1. Intermediary evaluation by experts	225
7.6.2. Final evaluation by professional drivers	226
7.7. Conclusions and viewpoints	229
7.8. Bibliography	230
Chapter 8. Menu Sonification in an Automotive Media Center: Design and Evaluation	233
Nicolas MISDARIIS, Julien TARDIEU, Sabine LANGLOIS and Séverine LOISEAU	
8.1. General context	233
8.2. Specifications of the problem: identification of functions	235
8.2.1. Hierarchical menu	235
8.2.2. Sonification	237
8.2.3. The wider issues of the problem	239
8.3. State of the art	239
8.3.1. Sound representation of the hierarchical level	240
8.3.2. Sound representation of the semantic content	245
8.3.3. Mixed approaches	248
8.3.4. Discussion	249
8.4. Method of sound design: hybrid model for the sonification of a hierarchical menu	250
8.4.1. Proposition of a hybrid model: original mixed approach.	250
8.4.2. Two instances of the model	253
8.5. Evaluation protocols: general evaluation methods	255
8.5.1. Generality regarding the experimental evaluation approaches of auditory stimuli	255
8.5.2. Specificity of the evaluation protocol of auditory HMIs	258

8.5.3. Experimental approaches specific to interactivity	260
8.5.4. Review of evaluation methods of the state-of-the-art studies	261
8.6. Methodology adopted for evaluation of the system and initial results	265
8.6.1. Recall of the experimental frame	265
8.6.2. Goals and hypotheses of the experiment	267
8.6.3. Description of the protocol	267
8.6.4. First results obtained	269
8.6.5. Post-drive commentaries	273
8.6.6. Conclusions	274
8.7. Discussion and perspectives	274
8.7.1. Discussion	274
8.7.2. Viewpoints	277
8.8. Bibliography	278
Chapter 9. Consideration of the Travel Time Experience in the Conceptual Models of Personalized Interactive Applications	283
Arnaud BROSSARD, Mourad ABED, Christophe KOLSKI and Guillaume USTER	
9.1. Transport: a field with particular needs in terms of personalization of information	283
9.2. The modeling of applications and consideration of the needs of users in the context of personalizing interactive applications	284
9.2.1. Modeling of applications and the MDE approach	284
9.2.2. Modeling of the user in interactive applications	286
9.2.3. Definition and limitations of the consideration of context	286
9.2.4. User model and transport: consideration of users' travel time experience	288
9.3. Specificities in the field of transport in the framework of a method of modeling personalized interactive applications	290
9.3.1. Introduction	290
9.3.2. A different approach to the analysis of needs	290
9.3.3. Categories of the travel time experience of users	292
9.3.4. The issue of identification of category changes	294
9.3.5. Summary and discussion	297
9.4. Application of the method	299
9.4.1. Presentation of the Viatic.Mobilité project	299
9.4.2. An example of HCI personalization	299
9.4.3. An example of business process personalization: the organization of a trip	301
9.4.4. Extension of the approach to other business domains	304
9.4.5. Summary and discussion	305
9.5. Conclusion	306
9.6. Bibliography	306

Chapter 10. Towards New Interactive Displays in Stations and Airports.	311
Christophe JACQUET, Yacine BELLIK and Yolaine BOURDA	
10.1. Introduction	311
10.2. Related work	313
10.3. Targeted characteristics of the system	314
10.3.1. Opportunism	314
10.3.2. Multimodality	314
10.3.3. Adaptation	315
10.4. The KUP model	315
10.4.1. Source of knowledge, users and presentation mechanisms.	315
10.4.2. Comparison with the existing models	316
10.4.3. Notion of proximity.	317
10.4.4. Semantic units	320
10.5. Agent architecture	320
10.6. Allocation and instantiation in KUP	321
10.7. Implementation.	324
10.8. Experiments.	325
10.8.1. The “departing flights” experiment	326
10.8.2. Experiment: “finding one’s way in a station”.	332
10.9. Conclusions and perspectives	339
10.10. Bibliography.	340
Chapter 11. Transport: a Fertile Ground for the Plasticity of User Interfaces	343
Gaëlle CALVARY, Audrey SERNA, Christophe KOLSKI and Joëlle COUTAZ	
11.1. Introduction	343
11.2. Evolution of human-computer interaction	344
11.2.1. Diversity of interaction resources.	344
11.2.2. Dynamicity of interaction resources	347
11.2.3. User control	350
11.3. User interface plasticity: user viewpoint	352
11.3.1. Definition.	352
11.3.2. Illustration in transport.	354
11.4. User interface plasticity: system viewpoint	355
11.4.1. Retrospective.	356
11.4.2. Illustration in transport.	357
11.5. Towards a problem space for the implementation of plastic user interfaces	358
11.5.1. User viewpoint: external properties	359
11.5.2. System viewpoint: internal properties	362
11.6. Conclusion and perspectives	363

xii Human-Computer Interactions in Transport
