<b>Acknowledgments</b>	ix
<b>Preface</b>	xi
<b>Chapter 1. Introduction</b>	1
1.1. Evolutionary computation in food science and technology	1
1.2. A panorama of the current use of evolutionary algorithms in the domain	2
1.3. The purpose of this book	6
<b>Chapter 2. A Brief Introduction to Evolutionary Algorithms</b>	7
2.1. Artificial evolution: Darwin's theory in a computer	8
2.2. The source of inspiration: evolutionism and Darwin's theory	10
2.3. Darwin in a computer	12
2.4. The genetic engine	14
2.4.1. Evolutionary loop	14
2.4.2. Genetic operators	17
2.4.3. GAs and binary representation	17
2.4.4. ESs and continuous representation	18
2.4.5. GP and tree-based representation	20
2.4.6. GE and grammar-based representation	23

2.4.7. Selective pressure . . . . .	23
2.5. Theoretical issues . . . . .	24
2.6. Beyond optimization . . . . .	26
2.6.1. Multimodal landscapes . . . . .	26
2.6.2. Co-evolution . . . . .	27
2.6.3. Multiobjective optimization . . . . .	29
2.6.4. Interactive optimization . . . . .	31
<b>Chapter 3. Model Analysis and Visualization . . . . .</b>	<b>33</b>
3.1. Introduction . . . . .	33
3.1.1. Experimental data . . . . .	37
3.1.2. Modeling milk gel competition at the interface . . . . .	39
3.1.3. Learning the parameters of the model using an evolutionary approach . . . . .	41
3.1.4. Visualization using the GraphDice environment . . . . .	43
3.2. Results and discussion . . . . .	45
3.2.1. Sensitivity analysis . . . . .	45
3.2.2. Visual exploration of the model . . . . .	46
3.2.3. Theoretical discussion . . . . .	48
3.3. Conclusions . . . . .	53
3.4. Acknowledgments . . . . .	55
<b>Chapter 4. Interactive Model Learning . . . . .</b>	<b>57</b>
4.1. Introduction . . . . .	58
4.2. Background . . . . .	59
4.2.1. Bayesian networks . . . . .	59
4.2.2. The structure learning problem . . . . .	60
4.2.3. Visualizing BNs . . . . .	63
4.3. Proposed approach . . . . .	63
4.4. Experimental setup . . . . .	66
4.5. Analysis and perspectives . . . . .	67
4.6. Conclusion . . . . .	70
<b>Chapter 5. Modeling Human Expertise Using Genetic Programming . . . . .</b>	<b>71</b>
5.1. Cooperative co-evolution . . . . .	72
5.2. Modeling agrifood industrial processes . . . . .	73

5.2.1. The Camembert cheese-ripening process . . . . .	74
5.2.2. Modeling expertise on cheese ripening . . . . .	77
5.3. Phase estimation using GP . . . . .	77
5.3.1. Phase estimation using a classical GP . . . . .	77
5.3.2. Phase estimation using a Parisian GP . . . . .	81
5.3.3. Variable population size strategies in a Parisian GP	86
5.3.4. Analysis . . . . .	98
5.4. Bayesian network structure learning using CCEAs . .	99
5.4.1. Recalling some probability notions . . . . .	99
5.4.2. Bayesian networks . . . . .	100
5.4.3. Evolution of an IM . . . . .	105
5.4.4. Sharing . . . . .	109
5.4.5. Immortal archive and embossing points . . . . .	110
5.4.6. Description of the main parameters . . . . .	111
5.4.7. BN structure estimation . . . . .	112
5.4.8. Experiments and results . . . . .	114
5.4.9. Analysis . . . . .	122
5.5. Conclusion . . . . .	123
<b>Conclusion</b> . . . . .	125
<b>Bibliography</b> . . . . .	127
<b>Index</b> . . . . .	149
