

Table of Contents

Introduction	xi
Chapter 1. Some Simple Examples	1
1.1. Introduction	1
1.2. Frictions	1
1.2.1. Coulomb's law	1
1.2.2. Differential equation with univalued operator and usual sign	3
1.2.3. Differential equation with multivalued term: differential inclusion	11
1.2.4. Other friction laws	12
1.3. Impact	16
1.3.1. Difficulties with writing the differential equation	16
1.3.2. Ill-posed problems	19
1.4. Probabilistic context	22
Chapter 2. Theoretical Deterministic Context	27
2.1. Introduction	27
2.2. Maximal monotone operators and first result on differential inclusions (in \mathbb{R})	27
2.2.1. Graphs (operators) definitions	28
2.2.2. Maximal monotone operators	29
2.2.3. Convex function, subdifferentials and operators	33
2.2.4. Resolvent and regularization	38
2.2.5. Taking the limit	40
2.2.6. First result of existence and uniqueness for a differential inclusion	40
2.3. Extension to any Hilbert space	45
2.4. Existence and uniqueness results in Hilbert space	57

2.5. Numerical scheme in a Hilbert space	59
2.5.1. The numerical scheme	59
2.5.2. State of the art summary and results shown in this publication	60
2.5.3. Convergence (general results and order 1/2)	61
2.5.4. Convergence (order one)	67
2.5.5. Change of scalar product	72
2.5.6. Resolvent calculation	74
2.5.7. More regular schemes	76
Chapter 3. Stochastic Theoretical Context	79
3.1. Introduction	79
3.2. Stochastic integral	79
3.2.1. The stochastic processes background	80
3.2.2. Stochastic integral	84
3.3. Stochastic differential equations	90
3.3.1. Existence and uniqueness of strong solution	91
3.3.2. Existence and uniqueness of weak solution	92
3.3.3. Kolmogorov and Fokker–Planck equations	95
3.4. Multivalued stochastic differential equations	101
3.4.1. Problem statement	101
3.4.2. Uniqueness and existence results	103
3.5. Numerical scheme	104
3.5.1. Which convergence: weak or strong?	106
3.5.2. Strong convergence results	108
3.5.3. Weak convergence results	122
Chapter 4. Riemannian Theoretical Context	129
4.1. Introduction	129
4.2. First or second order	129
4.3. Differential geometry	131
4.3.1. Sphere case	131
4.3.2. General case	132
4.4. Dynamics of the mechanical systems	139
4.4.1. Definition of mechanical system	139
4.4.2. Equation of the dynamics	141
4.5. Connection, covariant derivative, geodesics and parallel transport	144
4.6. Maximal monotone term	148
4.7. Stochastic term	149
4.8. Results on the existence and uniqueness of a solution	151

Chapter 5. Systems with Friction	155
5.1. Introduction	155
5.2. Examples of frictional systems with a finite number of degrees of freedom	155
5.2.1. General framework	155
5.2.2. Two elementary models	156
5.2.3. Assembly and results in finite dimensions	165
5.2.4. Conclusion	193
5.2.5. Examples of numerical simulation	194
5.2.6. Identification of the generalized Prandtl model (principles and simulation)	205
5.3. Another example: the case of a pendulum with friction	215
5.3.1. Formulation of the problem, existence and uniqueness	215
5.3.2. Numerical scheme	218
5.3.3. Numerical estimation of the order	219
5.3.4. Example of numerical simulations	221
5.3.5. Free oscillations	221
5.3.6. Forced oscillations	221
5.3.7. Transition matrix and calculation of the Lyapunov exponents . .	222
5.3.8. Melnikov's method, transitory chaos and Lyapunov exponents .	230
5.4. Elastoplastic oscillator under a stochastic forcing	231
5.4.1. Introduction	231
5.4.2. Modeling	232
5.4.3. Numerical scheme	236
5.4.4. Numerical results	238
5.5. Spherical pendulum under a stochastic external force	243
5.5.1. Establishment of the model	243
5.5.2. Numerical aspects	248
5.6. Gephyroidal model	255
5.6.1. Introduction	255
5.6.2. Description and transformation of the model	256
5.6.3. Quasi-static problems	263
5.6.4. Numerical simulations	265
5.6.5. Conclusion	267
5.7. Chain	268
5.7.1. Introduction	268
5.7.2. Description of the model	270
5.7.3. Transformation of the equations	271
5.7.4. Conclusion	283
5.8. An infinity of internal variables: continuous generalized Prandtl model	283
5.8.1. Introduction	283
5.8.2. Description of the continuous model	284

5.8.3. Existence, uniqueness and regularity results	287
5.8.4. Application to the discrete case, and convergence of the discrete model to the continuous model	289
5.8.5. Numerical scheme	291
5.8.6. Study of hysteresis loops	293
5.8.7. Numerical simulations	301
5.9. Locally Lipschitz continuous spring	301
5.9.1. Introduction	301
5.9.2. The studied model	301
5.9.3. Results for the existence and uniqueness of the solutions	303
5.9.4. Convergence results for the numerical schemes	311
5.9.5. The locally Lipschitz continuous case	313
5.9.6. Identification of the parameters from the hysteresis loops	314
5.9.7. Numerical simulations	320
Chapter 6. Impact Systems	325
6.1. Existence and uniqueness for simple problems (one degree of freedom)	326
6.1.1. The work of Schatzman–Paoli	326
6.1.2. Simple case with one degree of freedom, forcing and impact: piecewise analytical solutions	327
6.1.3. Adaptation of some classical methods	329
6.1.4. Movement with the accumulation of impacts and a sticking phase	333
6.1.5. Behavior of the numerical methods	337
6.1.6. Convergence and order of one-step numerical methods applied to non-smooth differential systems	338
6.1.7. Results of numerical experiments	343
6.2. A particular behavior: grazing bifurcation	348
6.2.1. Approximation of the map in the general case	349
6.2.2. Particular case	350
6.2.3. Stability of the non-differentiable fixed point	351
6.2.4. Numerical example	353
Chapter 7. Applications–Extensions	355
7.1. Oscillators with piecewise linear coupling and passive control	355
7.1.1. Description of the model	356
7.1.2. Free oscillations of the system	356
7.1.3. Order ϵ^1	362
7.1.4. Case of periodic forcing	366
7.1.5. Conclusion	377
7.2. Friction and passive control	378
7.2.1. Introduction	378

Table of Contents ix

7.2.2. Introduction to the models: smooth and non-smooth systems	379
7.3. The billiard ball	386
7.3.1. Maximal monotone framework	386
7.3.2. More realistic but non-maximal monotone framework	389
7.4. An industrial application: the case of a belt tensioner	390
7.4.1. The theory	390
7.4.2. The tensioner used	392
7.4.3. Identification of the parameters	392
7.4.4. Validation	393
7.5. Problems with delay and memory	396
7.5.1. Theory	396
7.5.2. Applications	399
7.6. Other friction forces	400
7.6.1. More general forms (variable dynamical coefficient)	401
7.6.2. With a variable static coefficient	419
7.6.3. With variable static and dynamical coefficients	421
7.7. With the viscous dissipation term	423
7.8. Ill-posed problems	424
7.8.1. First model: limit of a well-posed friction law	426
7.8.2. Second model: a differential inclusion without uniqueness	427
7.8.3. Conclusion	429
Appendix 1. Mathematical Reminders	431
A1.1. Two Gronwall's lemmas	431
A1.2. Norms, scalar products, normed vector space, Banach and Hilbert space	432
A1.2.1. Scalar products, norms	432
A1.2.2. Banach and Hilbert space, separable space	433
A1.3. Symmetric positive definite matrices	435
A1.4. Differentiable function	435
A1.5. Weak limit	436
A1.6. Continuous function spaces	436
A1.7. L^p space of integrable functions	437
A1.7.1. $L^p(\Omega)$ space	437
A1.7.2. $L^p(\Omega, \mathbb{R}^q)$ space	438
A1.7.3. $L^p(\Omega; H)$ spaces	438
A1.8. Distributions	439
A1.8.1. Real values distributions	439
A1.8.2. Distributions with values in \mathbb{R}^q	440
A1.8.3. Distributions with values in Hilbert space	440
A1.9. Sobolev space definition	441
A1.9.1. Functions with real values	441
A1.9.2. Functions with values in Hilbert space	441

Appendix 2. Convex Functions	443
A2.1. Functions defined on \mathbb{R}	443
A2.2. Functions defined on Hilbert space	446
A2.2.1. Any Hilbert space	446
A2.2.2. Particular case of the finite dimension	446
Appendix 3. Proof of Theorem 2.20	447
Appendix 4. Proof of Theorem 3.18	455
Appendix 5. Research of Convex Potential	467
A5.1. Method used	467
A5.2. Lemma 5.1	468
A5.3. Lemma 5.4	473
A5.4. Lemma 7.1	476
Bibliography	477
Index	495
