Table of Contents

Foreword xiii
Eric BESSON

Foreword xv
Christian LERMINIAUX

Introduction xvii
Yves VANDENBOOMGAERDE, Christian LERMINIAUX and Nada MATTA

PART 1. INDUSTRIAL ISSUES 1

Chapter 1. Safety and Performance of Electricity Production Facilities . . 3
Gilles DELEUZE, Jean PRIMET, Philippe KLEIN, Carole DUVAL and Antoine DESPUJOLS

Chapter 2. Monitoring of Radioactive Waste Disposal Cells in Deep Geological Formation 7
Stéphane BUSCHAERT and Sylvie LESOILLE

2.1. Context 7
2.2. Monitoring of the environment 8
2.3. Monitoring of geological repository structures 9
2.4. Conclusion and perspectives 12

Chapter 3. Towards Fourth-generation Nuclear Reactors 13
Jean-Philippe NABOT, Olivier GASTALDI, François BAQUÉ, Kévin PAUMEL and Jean-Philippe JEANNOT

3.1. Context 13
3.2. Surveillance and acoustic detection 15

3.3. Inspection during operation 17
3.3.1. The case of acoustic measurements 18
3.4. Conclusion 18

PART 2. SUPERVISON AND MODELING OF COMPLEX SYSTEMS 19

Chapter 4. Fault-tolerant Data-fusion Method: Application on Platoon Vehicle Localization 21
Maan EL BADAOUI EL NAJIAR, Cherif SMAILI, François CHARPILLET, Denis POMORSKI and Mireille BAYART

4.1. Introduction. 21
4.2. Review 22
4.3. Bayesian network for data fusion 25
4.3.1. Bayesian network and Kalman filter. 26
4.4. Localization of a single vehicle: multisensor data fusion with a dynamic Bayesian network 28
4.4.1. Presentation of the approach developed. 30
4.4.2. Inference in switching Kalman filter 33
4.4.3. Detailed synopsis of the method based on Bayesian networks . . . 35
4.4.4. Example of management of multi-hypotheses by a Bayesian network. 36
4.4.5. Illustration of the map localization method using SKF 38
4.5. Multi-vehicle localization 42
4.5.1. The problem studied 42
4.5.2. Communication within the convoy 43
4.5.3. Sensors used on each vehicle in the convoy 43
4.5.4. Bayesian network for the localization of a chain of vehicles 45
4.5.5. Extension of the approach: modeling and localization of a chain of vehicles 45
4.5.6. The issue with this model 48
4.5.7. New model for the localization of a chain of vehicles 48
4.5.8. Proportional commands 50
4.5.9. Functional analysis of models of the convoy. 54
4.6. Conclusions and perspectives 55
4.7. Bibliography 57

Chapter 5. Damage and Forecast Modeling 61
Anne BARROS, Eric LEVRAT, Mitra FOULADIRAD, Khanh LE SON, Thomas RUIN, Benoît IUNG, Alexandre VOISIN, Maxime MONNIN, Antoine DESPUJOLS, Emmanuel RÉMY and Ludovic BÉNÉTRIX

5.1. Introduction. 61
5.1.1. Operational level 62

5.1.2. Strategic level 62
5.2. Preliminary study of data 63
5.2.1. Structure of the database 63
5.2.2. Performance criterion for the prognostic 63
5.2.3. Definition of a deterioration indicator 64
5.3. Construction of the deterioration indicator 65
5.3.1. Study of the failure space with PCA 65
5.3.2. Damage indicator defined as a distance 66
5.4. Estimation of the residual life span (RUL) 68
5.4.1. Simple approach based on the life span 68
5.4.2. Stochastic deterioration model 70
5.5. Conclusion 72
5.6. Bibliography 73

Chapter 6. Diagnosis of Systems with Multiple Operating Modes 75
Taha BOUKHOBZA, Frédéric HAMELIN, Benoît MARX, Gilles MOUROT, Anca Maria NAGY, José RAGOT, Djemal Eddine Chouaib BELKHIAT, Kevin GUELTON, Dalel JABRI, Noureddine MANAMANNI, Sinuhé MARTINEZ, Nadhir MESSAI, Vincent COCQUEMPOT, Assia HAKEM, Komi Midzodzi PEKPE, Talel ZOUARI, Michael DEFOORT, Mohammed DJEMAI and Jérémy VAN GORP

6.1. Introduction. 75
6.2. Detection of faults for a class of switching systems 77
6.2.1. Introduction 77
6.2.2. Structure of the residual generator and observer design 78
6.2.3. Simulation and results 81
6.2.4. Conclusions 83
6.3. Analytical method to obtain a multiple model 83
6.3.1. Introduction 83
6.3.2. Setting the problem. 84
6.3.3. Transformation in multiple-model form 85
6.3.4. Conclusion. 89
6.4. Detection of switching and operating mode recognition without the explicit use of model parameters 89
6.4.1. Introduction 89
6.4.2. Diagnosis of SSs with linear modes 90
6.4.3. Diagnosis of a switching system with uncertain nonlinear modes 96
6.4.4. Conclusions 100
6.5. Modeling, observation and monitoring of switching systems: application to a multicellular converter 100
6.5.1. Introduction 100
6.5.2. Multicellular converter with two arms or four quadrants. 101

6.5.3. Diagnosing faults in the four quadrant converter 102
6.5.4. Experimental benchmark for validation 107
6.6. Bibliography 109

Chapter 7. Multitask Learning for the Diagnosis of Machine Fleet 115
Xiyan HE, Gilles MOUROT, Didier MAQUIN, José RAGOT, Pierre BEAUSEROY, André SMOLARZ and Edith GRALL-MAËS

7.1. Introduction 115
7.2. Single-task learning of one-class SVM classifier 119
7.3. Multitask learning of 1-SVM classifiers 122
7.3.1. Formulation of the problem 122
7.3.2. Dual problem 124
7.4. Experimental results 125
7.4.1. Academic nonlinear example 125
7.4.2. Analysis of textured images 126
7.5. Conclusion 136
7.6. Acknowledgements 136
7.7. Bibliography 136

Chapter 8.The APPRODYN Project: Dynamic Reliability Approaches to Modeling Critical Systems 141
Jean-François AUBRY, Genia BABYKINA, Nicolae BRINZEI, Slimane MEDJAHER, Anne BARROS, Christophe BERENGUER, Antoine GRALL, Yves LANGERON, Danh NGOC NGUYEN, Gilles DELEUZE, Benoîte DE SAPORTA, François DUFOUR and Huilong ZHANG

8.1. Context and aims 141
8.1.1. Context 141
8.1.2. Objectives 142
8.2. Brief overview of the test case 143
8.2.1. General remarks 143
8.2.2. Functional description 143
8.2.3. Modeling the process 144
8.2.4. Modeling command logic 145
8.2.5. Reliability data and state graphs 146
8.2.6. Ageing 146
8.2.7. Sensors 147
8.3. Modeling using a stochastic hybrid automaton approach 147
8.3.1. Main concepts and references 147
8.3.2. What is a stochastic hybrid automaton? 148
8.3.3. Structuring and synchronization approach 150
8.3.4. Modeling the case study 151
8.3.5. Qualitative and quantitative results 154

8.3.6. Conclusion and perspectives for the stochastic hybrid automaton approach . . . 156
8.4. Modeling using piecewise deterministic Markov processes . . . 157
8.4.1. Principles and references . . . 157
8.4.2. What is a piecewise deterministic Markov process? . . . 158
8.4.3. Modeling the test case . . . 159
8.4.4. Modeling the VVP . . . 163
8.4.5. Modeling CEX . . . 163
8.4.6. Qualitative and quantitative results . . . 164
8.4.7. Conclusion and perspectives for the piecewise deterministic Markov processes and simulation approach . . . 167
8.5. Modeling using stochastic Petri nets . . . 168
8.5.1. Principles and references . . . 168
8.5.2. What is a stochastic Petri net? . . . 168
8.5.3. Modeling framework . . . 170
8.5.4. Qualitative and quantitative results . . . 173
8.5.5. SPN approach: conclusions and perspectives . . . 176
8.6. Preliminary conclusion and perspectives . . . 177
8.7. Bibliography . . . 177

PART 3. CHARACTERIZING BACKGROUND NOISE, IDENTIFYING CHARACTERISTIC SIGNATURES IN TEST CASES AND DETECTING NOISE REACTORS . . . 181

Chapter 9. Aims, Context and Type of Signals Studied . . . 183
François BAQUÉ, Olivier DESCOMBIN, Olivier GASTALDI and Yves VANDENBOOMGAERDE

Chapter 10. Detection/Classification of Argon and Water Injections into Sodium into an SG of a Fast Neutron Reactor . . . 191
Pierre BEAUSEROY, Edith GRALL-MAËS and Igor NIKIFOROV

10.1. Context and aims . . . 191
10.2. Data . . . 192
10.3. Online (sequential) detection-isolation . . . 193
10.3.1. Formulating the practical problem . . . 193
10.3.2. Formulating the statistical problem . . . 195
10.3.3. Non-recursive approach . . . 196
10.3.4. Recursive approach . . . 198
10.3.5. Practical algorithm . . . 200
10.3.6. Experimental results . . . 200
10.4. Offline classification (non-sequential) . . . 201
10.4.1. Characterization and approach used . . . 201

10.4.2. Initial characterization 202
10.4.3. Effective features 204
10.4.4. Classification. 205
10.4.5. Performance evaluation 207
10.4.6. Experimental results 208
10.5. Results and comments. 209
10.6. Conclusion 209
10.7. Bibliography 210

Chapter 11. A Dynamic Learning-based Approach to the Surveillance and Monitoring of Steam Generators in Prototype Fast Reactors 213
Laurent HARTERT, Moamar SAYED-MOUCHAWEH and Danielle NUZILLARD

11.1. Introduction 214
11.2. Proposed method for the surveillance and monitoring of a steam generator 215
11.2.1. Learning and classification 216
11.2.2. Detecting the evolution of a class. 217
11.2.3. Adapting a class after validating its evolution and creating a new class. 218
11.2.4. Validating classes 219
11.2.5. Defining the parameters of the SS-DFKNN method 221
11.3. Results 222
11.3.1. Data analysis 222
11.3.2. Classification results 224
11.3.3. Designing an automaton to improve classification rates 226
11.4. Conclusion and perspectives 227
11.5. Bibliography 228

Chapter 12. SVM Time-Frequency Classification for the Detection of Injection States 231
Simon HENROT, El-Hadi DJERMOUNE and David BRIE

12.1. Introduction 231
12.2. Preliminary examination of the data 232
12.2.1. Approach 232
12.2.2. Spectral analysis of the data 232
12.2.3. Class visualization 235
12.3. Detection algorithm 236
12.3.1. SVM implementation. 236
12.3.2. Algorithm calibration 238
12.4. Role of sensors 242
12.5. Experimental results 242
12.6. Bibliography 245

Chapter 13. Time and Frequency Domain Approaches for the Characterization of Injection States 247
Jean-Philippe CASSAR and Komi Midzodzi PEKPE

13.1. Introduction 247
13.1.1. Framework of the study 247
13.1.2. Processing recordings 248
13.1.3. Identifying the injection zones 248
13.1.4. Extraction of "non-injection" zones 248
13.2. Analyzing the statistical properties of spectral power densities 249
13.2.1. Methodology 249
13.2.2. Results 250
13.2.3. Exploring implementation in a new installation 254
13.3. Analysis of the filtering characteristics 256
13.3.1. Estimating filtering characteristics using an AR model 256
13.3.2. Comparing filtering characteristics 257
13.3.3. A leak detection algorithm 260
13.3.4. Conclusions on the autoregressive signal modeling-based approach 261
13.4. Conclusion on frequential and temporal approaches 262
13.5. Bibliography 263

PART 4. HUMAN, ORGANIZATIONAL AND ENVIRONMENTAL FACTORS IN RISK ANALYSIS 265

Chapter 14. Risk Analysis and Management in Systems Integrating Technical, Human, Organizational and Environmental Aspects 267
Geoffrey FALLET-FIDRY, Carole DUVAL, Christophe SIMON, Eric LEVRAT, Philippe WEBER and Benoît IUNG

14.1. Aims of the project 267
14.2. State of the art 268
14.2.1. Context of the study 268
14.2.2. Towards an "integrated" approach to risk: combining several specialist disciplines 270
14.3. Integrated risk analysis 272
14.3.1. Concepts 272
14.3.2. A description of the approach 273
14.4. Accounting for uncertainty in risk analysis 278
14.4.1. Different kinds and sources of uncertainty 278
14.4.2. Frameworks for modeling uncertainty 280
14.5. Modeling risk for a quantitative assessment of risk 284
14.5.1. Bayesian networks 284

14.5.2. Evaluating risk beyond a probabilistic framework. 285
14.6. Conclusions and future perspectives 286
14.7. Bibliography 286

Chapter 15. Integrating Human and Organizational Factors into the BCD Risk Analysis Model: An Influence Diagram-based approach 293
Karima SEDKI, Philippe POLET and Frédéric VANDERHAEGEN

15.1. Introduction 293
15.2. Introduction of the BCD (benefit-cost-deficit) approach 295
15.3. Analysis model for human actions 299
15.3.1. Accounting for organizational and human factors 300
15.3.2. Influence diagrams 301
15.3.3. Structure and parameters associated with the risk analysis model 302
15.4. Example application 305
15.4.1. Description of the case study: industrial printing presses. 305
15.4.2. Presentation of the model for the test case 306
15.5. Conclusion 314
15.6. Acknowledgements 314
15.7. Bibliography 314

Conclusion 317
Jean ARLAT and Nada MATTA
