<b>Notations</b>	xiii
<b>Preface</b>	xv
<b>Part 1. Elastic Solutions to Single Crack Problems</b>	1
<b>Chapter 1. Fundamentals of Plane Elasticity</b>	3
1.1. Complex representation of Airy's biharmonic stress function	3
1.2. Force acting on a curve or an element of arc	7
1.3. Derivation of stresses	9
1.4. Derivation of displacements	11
1.5. General form of the potentials $\phi$ and $\psi$	12
1.6. Examples	15
1.6.1. Circular cavity under pressure	15
1.6.2. Circular cavity in a plane subjected to uniaxial traction at infinity	16
1.7. Conformal mapping	18
1.7.1. Application of conformal mapping to plane elasticity problems	18
1.7.2. The domain $\Sigma$ is the unit disc $ \zeta  \leq 1$	20

1.7.3. The domain $\Sigma$ is the complement $\Sigma^-$ of the unit disc . . . . .	23
1.8. The anisotropic case . . . . .	26
1.8.1. General features . . . . .	26
1.8.2. Stresses, displacements and boundary conditions . . . . .	28
1.9. Appendix: mathematical tools . . . . .	29
1.9.1. Theorem 1 . . . . .	30
1.9.2. Theorem 2 . . . . .	31
1.9.3. Theorem 3 . . . . .	31
<b>Chapter 2. Fundamentals of Elasticity in View of Homogenization Theory . . . . .</b>	<b>33</b>
2.1. Green's function concept . . . . .	33
2.2. Green's function in two-dimensional conditions . . . . .	34
2.2.1. The general anisotropic case . . . . .	34
2.2.2. The isotropic case . . . . .	35
2.3. Green's function in three-dimensional conditions . . . . .	38
2.3.1. The general anisotropic case . . . . .	38
2.3.2. The isotropic case . . . . .	39
2.4. Eshelby's problems in linear microelasticity . . . . .	41
2.4.1. The (elastic) inclusion problem . . . . .	41
2.4.2. The Green operator of the infinite space . . . . .	44
2.4.3. The Green operator of a finite domain . . . . .	48
2.4.4. The inhomogeneity problem . . . . .	50
2.4.5. The inhomogeneity problem with stress boundary conditions . . . . .	51
2.4.6. The infinite heterogeneous elastic medium . . . . .	52
2.5. Hill tensor for the elliptic inclusion . . . . .	54
2.5.1. Properties of the logarithmic potential . . . . .	54
2.5.2. Integration of the $r_{,i}r_{,l}$ term . . . . .	57
2.5.3. Components of the Hill tensor . . . . .	59

---

2.6. Hill's tensor for the spheroidal inclusion . . . . .	60
2.6.1. Components of the Hill tensor . . . . .	63
2.6.2. Series expansions of the components of the Hill tensor for flat spheroids . . . . .	64
2.7. Appendix . . . . .	65
2.8. Appendix: derivation of the $\chi_{ij}$ . . . . .	67
<b>Chapter 3. Two-dimensional Griffith Crack . . . . .</b>	<b>71</b>
3.1. Stress singularity at crack tip . . . . .	72
3.1.1. Stress singularity in plane elasticity: modes I and II . . . . .	73
3.1.2. Stress singularity in antiplane problems in elasticity: mode III . . . . .	78
3.2. Solution to mode I problem . . . . .	80
3.2.1. Solution of $\mathcal{P}'_I$ . . . . .	82
3.2.2. Solution of $\mathcal{P}_I$ . . . . .	90
3.2.3. Displacement jump across the crack surfaces . . . . .	91
3.3. Solution to mode II problem . . . . .	92
3.3.1. Solution of $\mathcal{P}'_{II}$ . . . . .	93
3.3.2. Solution of $\mathcal{P}_{II}$ . . . . .	96
3.3.3. Displacement jump across the crack surfaces . . . . .	97
3.4. Appendix: Abel's integral equation . . . . .	98
3.5. Appendix: Neuber–Papkovitch displacement potentials . . . . .	101
<b>Chapter 4. The Elliptic Crack Model in Plane Strains . . . . .</b>	<b>103</b>
4.1. The infinite plane with elliptic hole . . . . .	103
4.1.1. $F_x = F_y = \Gamma = \Gamma' = 0$ . . . . .	104
4.1.2. $F_x, F_y, \Gamma, \Gamma' \neq 0$ . . . . .	106
4.1.3. Elliptic cavity in a plane subjected to a remote stress state at infinity . . . . .	107
4.1.4. Stress intensity factors . . . . .	108
4.1.5. Some remarks on unilateral contact . . . . .	111

---

4.2. Infinite plane with elliptic hole: the anisotropic case . . . . .	112
4.2.1. General properties . . . . .	112
4.2.2. Complex potentials for an elliptic cavity in the presence of traction at infinity . . . . .	115
4.2.3. Complex potentials for an elliptic cavity in the case of shear at infinity . . . . .	116
4.2.4. Stresses in the limit case $b \rightarrow 0$ (crack) . . . . .	117
4.2.5. Displacement discontinuities . . . . .	121
4.2.6. Closed cracks . . . . .	123
4.3. Eshelby approach . . . . .	130
4.3.1. Mode I . . . . .	130
4.3.2. Mode II . . . . .	133
<b>Chapter 5. Griffith Crack in 3D</b> . . . . .	137
5.1. Griffith circular (penny-shaped) crack in mode I . . . . .	138
5.1.1. Solution of $\mathcal{P}'_I$ . . . . .	139
5.1.2. Solution of $\mathcal{P}_I$ . . . . .	143
5.2. Griffith circular (penny-shaped) crack under shear loading . . . . .	144
5.2.1. Solution of $\mathcal{P}'_{II}$ . . . . .	146
5.2.2. Solution of $\mathcal{P}_{II}$ . . . . .	151
<b>Chapter 6. Ellipsoidal Crack Model: the Eshelby Approach</b> . . . . .	155
6.1. Mode I . . . . .	156
6.2. Mode II . . . . .	159
<b>Chapter 7. Energy Release Rate and Conditions for Crack Propagation</b> . . . . .	163
7.1. Driving force of crack propagation . . . . .	163
7.2. Stress intensity factor and energy release rate . . . . .	167

---

**Part 2. Homogenization of Microcracked Materials . . . . .** 173

**Chapter 8. Fundamentals of Continuum Micromechanics . . . . .** 175

8.1. Scale separation . . . . .	175
8.2. Inhomogeneity model for cracks . . . . .	177
8.2.1. Uniform strain boundary conditions . . . . .	177
8.2.2. Uniform stress boundary conditions . . . . .	181
8.2.3. Linear elasticity with uniform strain boundary conditions . . . . .	182
8.2.4. Linear elasticity with uniform stress boundary conditions . . . . .	185
8.3. General results on homogenization with Griffith cracks . . . . .	187
8.3.1. Hill's lemma with Griffith cracks . . . . .	187
8.3.2. Uniform strain boundary conditions . . . . .	188
8.3.3. Uniform stress boundary conditions . . . . .	190
8.3.4. Derivation of effective properties in linear elasticity: principle of the approach . . . . .	190
8.3.5. Appendix . . . . .	194

**Chapter 9. Homogenization of Materials Containing Griffith Cracks . . . . .** 197

9.1. Dilute estimates in isotropic conditions . . . . .	197
9.1.1. Stress-based dilute estimate of stiffness . . . . .	199
9.1.2. Stress-based dilute estimate of stiffness with closed cracks . . . . .	202
9.1.3. Strain-based dilute estimate of stiffness with opened cracks . . . . .	204
9.1.4. Strain-based dilute estimate of stiffness with closed cracks . . . . .	205
9.2. A refined strain-based scheme . . . . .	206
9.3. Homogenization in plane strain conditions for anisotropic materials . . . . .	208
9.3.1. Opened cracks . . . . .	208
9.3.2. Closed cracks . . . . .	211

<b>Chapter 10. Eshelby-based Estimates of Strain Concentration and Stiffness . . . . .</b>	<b>213</b>
10.1. Dilute estimate of the strain concentration tensor: general features . . . . .	213
10.1.1. The general case . . . . .	213
10.2. The particular case of opened cracks . . . . .	215
10.2.1. Spheroidal crack . . . . .	215
10.2.2. Elliptic crack . . . . .	216
10.2.3. Crack opening change . . . . .	218
10.3. Dilute estimates of the effective stiffness for opened cracks . . . . .	220
10.3.1. Opened parallel cracks . . . . .	222
10.3.2. Opened randomly oriented cracks . . . . .	224
10.4. Dilute estimates of the effective stiffness for closed cracks . . . . .	226
10.4.1. Closed parallel cracks . . . . .	228
10.4.2. Closed randomly oriented cracks . . . . .	228
10.5. Mori–Tanaka estimate of the effective stiffness . . . . .	229
10.5.1. Opened cracks . . . . .	231
10.5.2. Closed cracks . . . . .	233
<b>Chapter 11. Stress-based Estimates of Stress Concentration and Compliance . . . . .</b>	<b>235</b>
11.1. Dilute estimate of the stress concentration tensor . . . . .	235
11.2. Dilute estimates of the effective compliance for opened cracks . . . . .	236
11.2.1. Opened parallel cracks . . . . .	237
11.2.2. Opened randomly oriented cracks . . . . .	239
11.2.3. Discussion . . . . .	239
11.3. Dilute estimate of the effective compliance for closed cracks . . . . .	240
11.3.1. 3D case . . . . .	241
11.3.2. 2D case . . . . .	242
11.3.3. Stress concentration tensor . . . . .	243

---

11.3.4. Comparison with other estimates . . . . .	244
11.4. Mori–Tanaka estimates of effective	
compliance . . . . .	244
11.4.1. Opened cracks . . . . .	246
11.4.2. Closed cracks . . . . .	246
11.5. Appendix: algebra for transverse isotropy	
and applications . . . . .	246
<b>Chapter 12. Bounds</b> . . . . .	251
12.1. The energy definition of the homogenized	
stiffness . . . . .	252
12.2. Hashin–Shtrikman’s bound . . . . .	255
12.2.1. Hashin–Shtrikman variational principle .	255
12.2.2. Piecewise constant polarization field . .	259
12.2.3. Random microstructures . . . . .	261
12.2.4. Application of the Ponte-Castaneda and	
Willis (PCW) bound to microcracked	
media . . . . .	270
<b>Chapter 13. Micromechanics-based Damage</b>	
<b>Constitutive Law and Application</b> . . . . .	273
13.1. Formulation of damage constitutive law . . . .	273
13.1.1. Description of damage level by a single	
scalar variable . . . . .	274
13.1.2. Extension to multiple cracks . . . . .	276
13.2. Some remarks concerning the loss of	
uniqueness of the mechanical response in relation to	
damage . . . . .	277
13.3. Mechanical fields and damage in a hollow	
sphere subjected to traction . . . . .	280
13.3.1. General features . . . . .	280
13.3.2. Case of damage model based on the dilute	
estimate . . . . .	284
13.3.3. Complete solution in the case of the damage	
model based on PCW estimate . . . . .	285

13.4. Stability of the solution to damage evolution in a hollow sphere . . . . .	296
13.4.1. The MT damage model . . . . .	298
13.4.2. The general damage model [13.44] . . . . .	300
<b>Bibliography</b> . . . . .	305
<b>Index</b> . . . . .	309
