Introduction	xi
Part 1. Educational Processes at the Service of Ecological Transition	1
Chapter 1. Between Architecture and Climate: A Bioclimatic Approach	3
André DE HERDE, transcribed by Marjan SANSEN	
1.1. Introduction.	3
1.2. Bioclimatism	4
1.3. Sustainable development	5
1.4. Smartness	7
1.5. The “Architecture and Climate” research team.	7
1.6. Teaching	9
1.7. Conclusion	11
1.8. Questions	11
Chapter 2. Architecture, City, Landscape: The Place of History in Pedagogy Integrating the Climatic Emergency	15
Anne COSTE, Frédéric DELLINGER and Theodore GUINIC	
2.1. Introduction.	15
2.2. Climatic heritage through the landscape	19
2.2.1. A general trend but individualized local situations	19
2.2.2. The rise of the Mediterranean climate.	20
2.2.3. What models are there in this context?	21
2.2.4. Lessons for teaching	22

2.3. What lessons can be learned from environmental history?	23
2.3.1. Synthesis lessons and historiographic points of reference	25
2.3.2. Environmental history as a horizon or as a viewpoint	25
2.3.3. Environmental and long-term history	27
2.3.4. Critique of concepts, alternative narratives, a space for discussion	27
2.3.5. Environmental history: spur or model?	28
2.4. Integration of the climate dimension in the architectural history course	29
2.4.1. With doctoral students: work on precedents	32
2.4.2. Bachelor's degree: first and foremost, establish a relationship . . .	33
2.4.3. Master's degree (seminar/studio): working on resilience through mutual aid and the collective	35
2.5. Conclusion	36
2.6. References	37
Chapter 3. Ecological Transition Architecture Week (ETAW): An Introduction to the Assessment of Risks and Opportunities	41
Alain GUEZ and Antoine STECK	
3.1. Introduction.	41
3.2. Identifying current topics in terms of ecological transition	43
3.3. Territorial system sampling	44
3.4. From a thematic analysis...	46
3.4.1. ... towards the assessment of risks and opportunities in terms of ecological transition	47
3.5. A framework for reflection prior to the project.	49
Chapter 4. Climate Commons – Educational Research in Action	51
Edith AKIKI and Emmanuel DOUTRIAUX	
4.1. Introduction.	51
4.2. Climate	52
4.3. The common	54
4.3.1. Climate and the common	55
4.4. Educational sequences	58
4.5. Conclusion	64
4.6. References	66

Chapter 5. Drawing the Thickness of an Environment, Drawing the Thickness of Architecture	69
Christophe LAURENS, Valentin SANITAS, Clément GAILLARD, Tibo LABAT and Jérémie BUTTIN	
5.1. Introduction.	69
5.2. Something is happening in Notre-Dame-des-Landes	70
5.3. Living in the bocage.	70
5.4. Translating what we see	71
5.5. Drawing architecture and the environment	72
5.6. The lessons of Geddes	73
5.7. References	73
 Part 2. The Challenges of Ecological Transition Met by Research	 75
 Chapter 6. Overall Comfort in Elementary Schools with Humid Tropical Climates: Methodology for Adapting Comfort Scales	 77
Magalie TÉCHER and Hassan AIT HADDOU	
6.1. Introduction.	77
6.2. General framework and methods	78
6.2.1. Selection: choosing villages and elementary schools	78
6.2.2. Setting up the questionnaire and collecting data.	82
6.2.3. Overall comfort measurement	85
6.2.4. Session planning	85
6.2.5. Sample profile.	86
6.2.6. Methodology	86
6.3. Results and discussions.	88
6.3.1. Satisfaction analysis	88
6.3.2. Linear regression analysis.	92
6.3.3. Determination of global comfort scales.	99
6.4. Conclusion	101
6.5. Acknowledgments.	104
6.6. References	104
 Chapter 7. Urban Green-Blue Grids as a Potential Factor for Regulating Urban Temperature: The Marseille Canal – An Essential Local Opportunity	 107
Séverine STEENHUYSE	
7.1. Introduction.	107
7.2. The diagnosis of urban overheating	109

7.2.1. Characterization of urban heat islands (UHI)	109
7.2.2. Urban temperature variation factors	110
7.2.3. Remedy to UHI effect: the essential role of revegetation	115
7.2.4. Conclusion: simple solutions... but difficult to implement.	116
7.3. Urban green-blue grids to limit urban overheating?	116
7.3.1. The urban green-blue grid: definition	117
7.3.2. The UGN and its implementation	119
7.3.3. Link with the “nature in the city” challenges.	126
7.3.4. The implementation of the urban green-blue grid	126
7.3.5. Conclusion: heat island and the urban green network: possible overlaps?	127
7.4. The Marseille case.	128
7.4.1. The Marseille metropolis	128
7.4.2. An urban context in full reconfiguration	130
7.4.3. A rich, natural but ambivalent context	133
7.4.4. But great precariousness.	135
7.4.5. What role should be given to the Marseille canal?	137
7.4.6. Conclusion: a natural space subject to multiple urban constraints	139
7.5. Conclusion: design and build the city of tomorrow by integrating the issue of urban heat regulation as well as the revegetation of still available spaces	141
7.5.1. Rethinking the definition of the value of spaces.	142
7.5.2. The local planning document and its concrete implementation	142
7.5.3. The Marseille case	143
7.6. References	143
Chapter 8. Summer Comfort in the Face of Climate Change: Design Adaptation and Rehabilitation	147
Isabelle VERVISCH-FORTUNÉ	
8.1. Introduction.	148
8.2. The current context	149
8.3. Method	152
8.4. The research/teaching duality for energy transition	155
8.4.1. Research work on energy transition	155
8.5. The evolution of Master’s degree courses	157
8.5.1. Rehabilitation of vernacular buildings	157
8.5.2. Raw earth as an answer to summer comfort	162
8.5.3. Design of a new raw earth building	165

8.6. Energy theories and practices to be reinforced	169
8.7. Conclusion	171
8.8. References	171
Chapter 9. Mutations Project at ENSA Nancy	173
Cécile FRIES-PAIOLA	
9.1. Origins of the team – the Mutations project.	174
9.1.1. Concerns shared in 2015.	174
9.2. Gradual team building	175
9.3. The link between teaching, research and practice	175
9.4. <i>Rencontres Interdisciplinaires Mutations</i> (Mutations Interdisciplinary Meetings)	176
9.4.1. The goals of the event	177
9.4.2. The program and the guests.	178
9.4.3. First appraisal and perspectives	178
9.5. Mutations project workshops	180
9.5.1. Framework and project workshop principles.	180
9.5.2. Appropriation of the exercise by the students	182
9.6. The Mutations final thesis	188
9.7. References	191
Part 3. Teaching and Research on Ecological Transition: From Theory to Practice	193
Chapter 10. Form Follows Partnership	195
Damien ANTONI	
10.1. Introduction	195
10.2. The need for systemic thought: think global, act local.	196
10.2.1. Metropolization as inseparable from globalization	197
10.2.2. “Globalization does not exist. Only globalized sectors exist”	197
10.3. From systemic analysis to strategic action for urban ecology.	199
10.3.1. Form follows partnership	200
10.4. From the designer architect to the partner architect	201
10.4.1. From the designer architect to the provider architect	201
10.4.2. From the designer architect to the partner architect	201
10.4.3. Replacing the role of the architect as a city strategist	202
10.5. Openness: teaching an attitude more than adaptation to the market	202
10.6. References.	203

Chapter 11. Tackling Global Warming in the Ardèche Valley: Project Workshop Narrative	205
François NOWAKOWSKI	
11.1. Introduction	205
11.2. Three-year cooperation between ENSAL and the Ardèche valley . . .	206
11.3. Putting the bioregion to the test	207
11.4. Climate change and its consequences: a shared issue?	207
11.5. Climate: a constant that is no longer so?	208
11.6. Territorializing global challenges	210
11.7. Associating experiences with broader dynamics	214
11.8. The project as a means of testing, demonstrating, convincing	215
11.9. Projects that open a public debate and lead to the emergence of courses of action	222
11.10. References	223
Chapter 12. Learning from Toulouse: Lessons from the Bioclimatic Houses of Jean-Pierre Cordier	225
Clément GAILLARD	
12.1. Introduction	225
12.2. The volume and exposure of a bioclimatic house.	227
12.3. Trapping and storing thermal energy	231
12.4. The greenhouse as a living space and the resident's role in bioclimatic houses	234
12.5. Conclusion on the topicality of the bioclimatic approach	238
12.6. References.	240
Chapter 13. The !MPACT Contest: An Opportunity for Architecture Students	241
KARIBATI	
List of Authors	247
