Foreword	ix
Philippe BRUNET	
Introduction	xiii
Part 1. Persistence and Renewal of the Cluster Concept in Contemporary Innovation Policies	1
Chapter 1. From Industrial Districts to Knowledge Valleys: the Legacy of the Cluster	3
1.1. The industrial district: the oldest ancestor of the cluster	3
1.1.1. The economic approach of industrial atmosphere	3
1.1.2. The first Italian districts and their influence in France	5
1.1.3. The rise of districts: the end of the Fordist enterprise?	7
1.2. Spatial concentrations of technological activities	10
1.2.1. The time of technopoles: reconciling regional planning and innovation.	10
1.2.2. A spontaneous and innovative environment conducive to a “technological atmosphere”?	13
1.2.3. The era of cognitive capitalism: the race for creativity of individuals and territories	15
1.3. The valleys of knowledge: interindividual relations as a source of innovation.	17
1.3.1. Informal links in the heart of Silicon Valley	17
1.3.2. The relational logic essential to geographical proximity	19
1.3.3. Social capital as a driver of innovation	21

Chapter 2. The Management Roots of the Cluster and Its Worldwide Dissemination	25
2.1. An economic and management concept destined to become a public action mechanism	25
2.1.1. Porter's cluster: the rapid spread of success stories	25
2.1.2. Knowledge management and its workers as a dominant paradigm	29
2.1.3. A theoretical and practical toolkit provided by researcher-experts in clustering	33
2.2. Global dissemination of good clustering practices	36
2.2.1. A paradigm born in the United States and forged at the heart of the OECD	36
2.2.2. To adopt OECD recommendations, or have them imposed?	38
2.2.3. The European Union, sponsor of the race to the knowledge economy	40
2.3. The French legislative framework from the 1980s to the 2010s: a favored coming together of science and industry	43
2.3.1. Researchers converted into entrepreneurs	44
2.3.2. The university: a link in the cluster supply chain	46
2.3.3. A cluster for every territory	49
Chapter 3. The Cluster Imaginary: Tools, Local Narrative and Promise	53
3.1. Performative instruments: benchmarking, territorial marketing, visual instrumentation	53
3.1.1. Benchmarking or territorial mimicry	54
3.1.2. Territorial marketing: asserting the cluster's symbolic capital	55
3.1.3. Visual instrumentation: the image of a dense, expanding campus	57
3.2. The construction of a narrative	60
3.2.1. Evry, the French cradle of human genomics	60
3.2.2. Industrial renewal: the cluster as a solution to local economic development	62
3.2.3. The rhetoric of technological backwardness: overcoming French scientific slowness	63
3.3. Promises of innovation and employment at the territorial level	65
3.3.1. The promise of the biocluster: a sustainable environment and the medicine of the future	65
3.3.2. Becoming the capital of genobiomedicine, creating jobs for innovators	68
3.3.3. The naturalization of the cluster effect: an unquestionable concept?	71

Part 2. Prevented Synergies: the Case of a Biotechnology Cluster	75
Chapter 4. Networking Systems: Repeated but Hindered Initiatives	77
4.1. Scientific and industrial administration: establishing a recurrent event.	77
4.1.1. The emergence of an intermediary figure: the cluster administrator	78
4.1.2. Networking and renewing acquaintances among cluster members through regular events.	80
4.1.3. Fostering communities of practice: the creation of thematic bodies	83
4.2. Sharing a technology platform: mutualization or collaboration?	87
4.2.1. Resources as an intermediary: a policy of sharing expensive equipment	88
4.2.2. Platform usage: service provision before collaboration	91
4.2.3. Equipment demonstrations: connecting or making visible?	94
4.3. The institutionalization of conviviality: “ <i>la vie de site</i> ”.	98
4.3.1. Bringing together and involving employees from different backgrounds.	98
4.3.2. Building emotional and community connections through volunteering and sport.	101
4.3.3. L’Escale, a space of sociability revealing professional hierarchies	103
Chapter 5. Scientific Competition and Economic Competition: Social Fields Spanned by Internal Struggles	107
5.1. Asynchronous organizations and work rhythms	107
5.1.1. Dissonant work schedules between companies and laboratories	108
5.1.2. Belonging to the large biotechnology family or disciplinary demarcation logics?	112
5.2. A scientific field built from struggle and precarity.	114
5.2.1. A workforce that is becoming precarious.	114
5.2.2. Scientific work destabilized and concealed by competition	117
5.2.3. Researchers and industrial collaboration: an unequal commitment.	121

5.3. An unstable relationship between economic development and industrial secrets for companies	124
5.3.1. Individuals are increasingly encouraged to start a business to escape unemployment	124
5.3.2. The fragility of the male 30-something entrepreneur	127
5.3.3. Intense activity marked by the search for financing and competition	131
Chapter 6. The Avoided Cooperation	137
6.1. A patchy local network	137
6.1.1. What type of organizations for what type of interactions?	137
6.1.2. Scientific and market relations behind informal interindividual exchanges	141
6.1.3. More outwardly looking organizations	144
6.2. Cooperation prevented by paradoxical demands	146
6.2.1. Additional time pressure.	147
6.2.2. A disembodied objective between prescribed program and real work.	149
6.2.3. Loyalty and performance objectives towards the employer	152
6.3. Avoidance strategies	155
6.3.1. Avoiding scientific and technological issues.	155
6.3.2. Cluster administrators: between belief and lucidity	158
Conclusion	161
