Preface	xi
Thérèse ENCRENAZ and James LEQUEUX	
Chapter 1. Satellites and Rings of the Giant Planets	1
Athena COUSTENIS, Marcello FULCHIGNONI and Françoise ROQUES	
1.1. Introduction.	1
1.2. Jupiter's satellites	5
1.2.1. The Galilean satellites	5
1.2.2. The minor Jovian satellites	17
1.3. Saturn's satellites	17
1.3.1. Titan.	19
1.3.2. Enceladus.	30
1.3.3. The other icy satellites	33
1.3.4. Challenges for future missions in the Saturn system and Dragonfly.	39
1.4. The satellites of Uranus and Neptune	40
1.4.1. The satellites of Uranus	40
1.4.2. The satellites of Neptune	42
1.4.3. Future exploration of the icy giant planets' systems	43
1.5. The rings	43
1.5.1. Tidal forces and the Roche limit	46
1.5.2. Flattening and ring dispersion.	47
1.5.3. Jupiter's rings	47

1.5.4. Saturn's rings	48
1.5.5. Uranus's rings	51
1.5.6. Neptune's rings	51
1.5.7. The rings of small bodies	53
1.5.8. Ring dynamics.	56
1.5.9. The origin of the rings	59
1.5.10. An exo-ring.	61
1.6. References	62

Chapter 2. Comets, Asteroids, and Dwarf Planets 65

Jacques CROVISIER and Marcello FULCHIGNONI

2.1. Comets	65
2.1.1. Definition and nomenclature	66
2.1.2. The orbits and families of the comets	71
2.1.3. Cometary magnitude	74
2.1.4. Space exploration of the comets	76
2.1.5. The nucleus	82
2.1.6. The atmosphere	84
2.1.7. Dust and the tail.	102
2.1.8. The chemical diversity of the comets: a relationship to their origins?.	109
2.1.9. The interaction of comets with solar wind	110
2.2. The "historical" asteroids.	112
2.2.1. The asteroids in the main belt.	114
2.2.2. The asteroids that cross the orbit of the terrestrial planets	117
2.2.3. The Trojan asteroids	119
2.2.4. The properties of asteroids	120
2.3. The "new" asteroids.	129
2.3.1. The Centaurs.	130
2.3.2. Trans-Neptunian objects.	131
2.3.3. Interstellar objects	136
2.3.4. The origin and evolution of the asteroids	137
2.4. The dwarf planets	139
2.4.1. Ceres	140
2.4.2. Pluto and its satellites	144
2.4.3. Eris, Haumea, and Makemake	149
2.5. References	152

Chapter 3. Meteorites and Cosmochemistry	157
Brigitte ZANDA	
3.1. Rocks falling from the sky	157
3.2. Origin of meteorites	162
3.3. Planetary differentiation and groups of meteorites	165
3.4. Chondrites and the origin of the Solar System	169
3.4.1. The chemical composition of chondrites	170
3.4.2. The mineralogy of chondrites	173
3.4.3. The isotopic characteristics of bulk meteorites.	180
3.5. Differentiated meteorites	184
3.5.1. Fragments of the asteroid Vesta	184
3.5.2. Iron meteorites.	187
3.5.3. Pallasites	190
3.5.4. Fragments of the planet Mars	191
3.6. Witnesses to the formation and evolution of the Solar System.	195
3.7. References	197
Chapter 4. Formation and Dynamic History of the Solar System	205
Françoise ROQUES	
4.1. Introduction.	205
4.2. Laws of motion of the planets and satellites.	207
4.2.1. Kepler's laws	207
4.2.2. Gravity	209
4.2.3. Newton's fundamental laws of dynamics.	209
4.2.4. The orbital elements	211
4.3. The two-body problem	212
4.4. The three-body problem	213
4.4.1. Jacobi constant and Lagrange points.	214
4.4.2. Tadpole and horseshoe orbits	215
4.4.3. Hill sphere	216
4.5. Perturbations and resonances	217
4.6. Stability and chaos in the Solar System	218
4.7. Orbits in relation to a flattened body	220
4.8. Tidal effect	223
4.8.1. Tidal deformation	224
4.8.2. Tidal torque	225
4.8.3. Roche limit.	226

4.9. Nongravitational forces and orbits of small bodies	227
4.9.1. Radiation pressure (micrometer-sized grains)	227
4.9.2. Poynting-Robertson effect (small macroscopic particles)	229
4.9.3. The Yarkovsky Effect (meter to kilometer-sized particles)	230
4.9.4. Yorp torque (asymmetric bodies)	230
4.9.5. Friction from solar particles (submicrometer dust)	230
4.9.6. Friction in gas	230
4.10. Formation of planetary systems	231
4.10.1. A disk of planetoids	233
4.10.2. Formation of terrestrial planets	233
4.10.3. Formation of Jupiter	235
4.10.4. Formation of giant planets by core accretion	237
4.10.5. Formation by disk instability	239
4.10.6. Disappearance of the gas	240
4.10.7. Catastrophic collisions	243
4.10.8. Small bodies	245
4.10.9. Planetary migration	246
4.10.10. Fate of the small bodies	249
4.10.11. Exoplanetary formation	252
4.11. References	255
Chapter 5. Origin of Life and Extraterrestrial Life	257
James LEQUEUX	
5.1. Definition of life	257
5.2. The appearance of life on Earth	258
5.2.1. Physicochemical conditions	258
5.2.2. The first forms of life	260
5.2.3. The formation of living cells	265
5.3. Life elsewhere in the Solar System	268
5.3.1. Mars	269
5.3.2. Venus	270
5.3.3. Satellites of the giant planets	271
5.4. How can life be detected on exoplanets?	274
5.5. Communicating with other civilizations?	275
5.6. References	275

Chapter 6. Methods for Studying the Solar System.	277
Thérèse ENCRENAZ, Marcello FULCHIGNONI, Laurent LAMY, Françoise ROQUES and James LEQUEUX	
6.1. History.	277
6.2. Observational techniques.	280
6.2.1. Remote sensing	280
6.2.2. Methods of space exploration.	291
6.2.3. Virtual Observatory and databases.	303
6.2.4. Perspectives of ground-based and space observations	306
6.3. Computer simulations.	314
6.3.1. Dynamics.	314
6.3.2. Global climate models	319
6.4. References	324
Appendix. Web links	327
Glossary	329
List of Authors	341
Index	343
