Preface	ix
Introduction	xi
Chapter 1. Some Definitions	1
1.1. Continuous case vs discrete case: when a theorem no longer holds	1
1.2. Landscape	2
1.2.1. Size of a landscape	3
1.2.2. Adjacency and path	4
1.2.3. Minimum	5
1.2.4. Modality	6
1.2.5. Plateau	7
1.2.6. Basin of attraction	8
1.2.7. Domain	11
1.2.8. Structure	11
Chapter 2. Difficulty of the Difficulty	15
2.1. Effort and budgets	15
2.2. Acceptable solution	17
2.3. Difficulty vs complexity	21
2.4. Normalized roughness	22
2.5. Measure $\delta_{r,\varepsilon}$	24

2.6. Measure δ_0	24
2.7. Measures non-NisB	26
2.7.1. Deceptive vs disappointing	28
2.7.2. Measure consistency	28
2.8. Perceived difficulty	41
Chapter 3. Landscape Typology	45
3.1. Reliable functions, misleading and neutral	46
3.1.1. Dimension $D = 1$	47
3.2. Plateaus	52
3.2.1. Dimension $D = 1$	52
3.2.2. Dimension $D \geq 2$	57
3.3. Multimodal functions	59
3.3.1. Functions with single global minimum	59
3.3.2. Functions with several global minima	60
3.4. Unimodal functions	62
Chapter 4. LandGener	65
4.1. Examples	66
4.2. Generated files	73
4.3. Regular landscape	74
Chapter 5. Test Cases	79
5.1. Structure of a representative test case	79
5.2. CEC 2005	82
5.3. CEC 2011	82
Chapter 6. Difficulty vs Dimension	85
6.1. Rosenbrock function	85
6.2. Griewank function	86
6.3. Example of the normalized paraboloid	87
6.4. Normalized bi-paraboloid	91
6.5. Difficulty δ_0 and dimension	94

Chapter 7. Exploitation and Exploration vs Difficulty	95
7.1. Exploitation, an incomplete definition	96
7.2. Rigorous definitions	97
7.3. Balance profile	104
Chapter 8. The Explo2 Algorithm	107
8.1. The algorithm	108
8.1.1. Influence of the balance profile	113
8.2. Subjective numerical summary of a distribution of results	119
Chapter 9. Balance and Perceived Difficulty	125
9.1. Constant profile-based experiments	125
9.2. Calculated difficulty vs perceived difficulty	127
Appendix	131
References	181
Index	185
