<b>Acknowledgments</b> . . . . .	xi
<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. Basic Model: Single Server, Single Flow</b> . . . . .	1
1.1. Modeling principles . . . . .	1
1.2. Constant rate server . . . . .	2
1.3. Flow model . . . . .	3
1.4. Server model . . . . .	6
1.5. Delay and memory usage models . . . . .	8
1.6. Summary . . . . .	12
<b>Part 1. (min,plus) Functions and Algorithms</b> . . . . .	13
<b>Chapter 2. The (min,plus) Functions Semi-ring</b> . . . . .	15
2.1. The (min,plus)-based dioids . . . . .	16
2.1.1. Dioids . . . . .	16
2.1.2. The (min,plus) dioid . . . . .	18
2.1.3. The dioid of (min,plus) functions . . . . .	19
2.2. Sub-additive closure . . . . .	23
2.2.1. Kleene star operator . . . . .	23
2.2.2. Sub-additive closure . . . . .	24
2.3. Deconvolution . . . . .	28
2.3.1. Residuation theory . . . . .	29
2.3.2. (min,plus) deconvolution as a residuation operator . . . . .	30
2.4. Link with (max,plus) dioid . . . . .	33
2.5. Summary . . . . .	35

---

<b>Chapter 3. Sub-classes of Functions</b> . . . . .	37
3.1. Usual functions . . . . .	37
3.1.1. Convolution and deconvolution of the usual classes of functions . . . . .	40
3.1.2. Horizontal and vertical deviations for the usual classes of functions . . . . .	42
3.2. Non-negative and non-decreasing functions . . . . .	44
3.2.1. Pseudo-inverse of a function . . . . .	46
3.2.2. Convolution and continuity . . . . .	48
3.3. Concave and convex functions . . . . .	49
3.3.1. Concave functions . . . . .	50
3.3.2. Convex functions . . . . .	52
3.4. Summary . . . . .	56
<b>Chapter 4. Efficient Computations for (min,plus) Operators</b> . . . . .	59
4.1. Classes of functions with finite representations . . . . .	60
4.2. Piecewise linear concave/convex functions . . . . .	62
4.2.1. Representation of piecewise linear concave and convex functions . . . . .	63
4.2.2. (min,plus)-convolution of convex and concave functions . . . . .	65
4.3. A stable class of functions . . . . .	70
4.3.1. Examples of instability of some classes of functions . . . . .	71
4.3.2. Class of plain piecewise linear ultimately pseudo-periodic functions . . . . .	74
4.3.3. Functions with discrete domain . . . . .	80
4.4. Containers of (min,plus) functions . . . . .	81
4.4.1. Notations and context . . . . .	82
4.4.2. The object container . . . . .	84
4.4.3. Inclusion functions for containers . . . . .	90
4.5. Implementations . . . . .	95
<b>Part 2. Network Calculus: Local Analysis</b> . . . . .	97
<b>Chapter 5. Network Calculus Basics: a Server Crossed by a Single Flow</b> . . . . .	99
5.1. Arrival curve . . . . .	100
5.2. Service curves . . . . .	106
5.2.1. Min-plus minimal service curve . . . . .	106
5.2.2. Strict minimal service curve . . . . .	107

5.2.3. Comparison of min-plus and strict minimal service curves . . . . .	109
5.2.4. Maximal service curve . . . . .	113
5.3. From curves to performance guarantees . . . . .	115
5.3.1. Backlog and delay bounds . . . . .	115
5.3.2. Arrival curve for the departure cumulative function . . . . .	118
5.3.3. Complements on the performance operators . . . . .	120
5.4. Bibliographic and historic notes . . . . .	126
5.5. Summary . . . . .	127
<b>Chapter 6. Single Flow Crossing Several Servers . . . . .</b>	<b>129</b>
6.1. Servers in tandem . . . . .	129
6.1.1. Concatenation and service convolution . . . . .	130
6.1.2. The pay burst only once phenomenon . . . . .	131
6.1.3. Composition of strict service curves . . . . .	134
6.2. Control design . . . . .	135
6.2.1. Tandem control . . . . .	135
6.2.2. Feedback control . . . . .	137
6.3. Essential use cases . . . . .	141
6.3.1. Essential services curves . . . . .	141
6.3.2. Essential arrival curves . . . . .	144
6.4. Summary . . . . .	150
<b>Chapter 7. Multiple Flows Crossing One Server . . . . .</b>	<b>151</b>
7.1. MIMO servers and aggregation of flows . . . . .	152
7.1.1. Aggregate flow . . . . .	152
7.1.2. MIMO servers . . . . .	153
7.2. Blind or arbitrary multiplexing . . . . .	156
7.2.1. Blind multiplexing from an aggregate strict service . . . . .	156
7.2.2. Blind multiplexing and strict residual service curves . . . . .	159
7.2.3. Blind multiplexing and aggregate min-plus service curve . . . . .	161
7.3. Some service policies . . . . .	162
7.3.1. First-in-first-out . . . . .	163
7.3.2. Static priority . . . . .	169
7.3.3. General processor sharing . . . . .	171
7.3.4. Earliest-deadline-first . . . . .	176
7.4. Summary . . . . .	182

---

<b>Chapter 8. Packets</b> . . . . .	183
8.1. Packetizer . . . . .	184
8.2. Packet-based schedulers . . . . .	190
8.2.1. Non-preemptive static priority (NP-SP) . . . . .	191
8.2.2. Packetized GPS . . . . .	195
8.2.3. Deficit round robin . . . . .	197
8.2.4. Weighted round robin . . . . .	199
8.2.5. TDMA . . . . .	202
8.3. Bibliographic notes . . . . .	205
8.4. Summary . . . . .	206
<b>Chapter 9. A Hierarchy of Service Curves</b> . . . . .	209
9.1. Different types of service curves . . . . .	210
9.1.1. Weakly strict service . . . . .	210
9.1.2. Variable capacity node . . . . .	212
9.1.3. Real-time calculus and network calculus . . . . .	213
9.1.4. Adaptive service curves . . . . .	218
9.2. Comparison of service curves . . . . .	219
9.2.1. Monotony . . . . .	219
9.2.2. Families of service curves . . . . .	221
9.2.3. Hierarchy . . . . .	222
9.3. No intermediate service curve . . . . .	225
9.3.1. No good intermediate type of service curve . . . . .	226
9.3.2. Sufficiently strict service curves . . . . .	227
<b>Part 3. Network Calculus: Global Analysis</b> . . . . .	229
<b>Chapter 10. Modular Analysis: Computing with Curves</b> . . . . .	231
10.1. Network model . . . . .	232
10.1.1. Network description and notations . . . . .	232
10.2. Some special topologies . . . . .	233
10.3. The pay multiplexing only once phenomenon . . . . .	234
10.3.1. Loss of tightness . . . . .	235
10.3.2. A multi-dimensional operator for PMOO . . . . .	236
10.3.3. Composition and service policies . . . . .	239
10.3.4. Nested tandems . . . . .	240
10.4. Per-flow analysis of networks . . . . .	243
10.4.1. Total output analysis . . . . .	244
10.4.2. Separated flow analysis . . . . .	245
10.4.3. Group flow analysis . . . . .	247
10.5. NP-hardness of computing tight bounds . . . . .	251
10.6. Conclusion . . . . .	255

---

<b>Chapter 11. Tight Worst-case Performances</b> . . . . .	257
11.1. Tandem networks under arbitrary multiplexing . . . . .	258
11.1.1. Example of two servers in tandem . . . . .	258
11.1.2. A linear program for tandem networks . . . . .	259
11.1.3. The equivalence theorem . . . . .	261
11.2. Tandem networks under the FIFO policy . . . . .	262
11.2.1. Single node . . . . .	262
11.2.2. Tandem networks . . . . .	263
11.2.3. Bounds on the worst-case delay . . . . .	267
11.3. Bibliographic notes . . . . .	267
<b>Chapter 12. Stability in Networks with Cyclic Dependencies</b> . . . . .	269
12.1. Network stability . . . . .	270
12.1.1. Local stability . . . . .	270
12.1.2. Global stability . . . . .	271
12.2. The fix-point method: sufficient condition for global stability . . . . .	272
12.2.1. Feed-forward transformation . . . . .	273
12.2.2. A fix-point equation . . . . .	274
12.2.3. Stopped times . . . . .	275
12.2.4. Rate-latency service curves and token-bucket arrival curves . . . . .	276
12.3. Universally stable service policies . . . . .	276
12.3.1. Static priority policies . . . . .	276
12.3.2. Furthest destination first . . . . .	277
12.3.3. General processor sharing policies with constant rates . . . . .	279
12.4. Instability of some systems . . . . .	280
12.4.1. Adversarial methods . . . . .	280
12.4.2. Instability in network calculus with scaling . . . . .	283
12.5. Bibliographic notes . . . . .	286
<b>Conclusion</b> . . . . .	289
<b>Appendix</b> . . . . .	295
<b>List of Symbols</b> . . . . .	299
<b>References</b> . . . . .	303
<b>Index</b> . . . . .	317
