<b>Introduction</b> . . . . .	ix
<b>Chapter 1. Data Collection in Education</b> . . . . .	1
1.1. Use of existing databases in education . . . . .	1
1.1.1. International databases . . . . .	2
1.1.2. Compound databases . . . . .	3
1.2. Survey questionnaire . . . . .	4
1.2.1. Objective of a questionnaire . . . . .	4
1.2.2. Constitution of the sample . . . . .	4
1.2.3. Questions . . . . .	7
1.2.4. Structure of a questionnaire . . . . .	8
1.2.5. Writing . . . . .	9
1.3. Experimental approaches . . . . .	10
1.3.1. Inductive and deductive approaches . . . . .	10
1.3.2. Experimentation by psychologists . . . . .	11
1.3.3. Experimentation in education . . . . .	11
<b>Chapter 2. Elementary Descriptive Statistics and Data Representation</b> . . . . .	15
2.1. Tables and graphic representations . . . . .	15
2.1.1. Population, sample and individuals . . . . .	15
2.1.2. Variables . . . . .	16
2.1.3. Tables . . . . .	18
2.1.4. Graphic representations . . . . .	23
2.2. Mathematical indicators . . . . .	29
2.2.1. General points . . . . .	29
2.2.2. Some fundamentals of mathematical language . . . . .	29

2.2.3. Monivariate mathematical indicators . . . . .	32
2.2.4. Bivariate mathematical indicators . . . . .	37
2.3. Spatial data representation methods . . . . .	41
2.3.1. Maps to understand the geography of educational phenomena . . . . .	41
2.3.2. Statistical data represented on a map . . . . .	42
2.3.3. Range-based and point-based maps . . . . .	43
2.3.4. Other maps . . . . .	45
2.3.5. Geographic information systems . . . . .	46
2.3.6. Specific map-analysis methods . . . . .	46
<b>Chapter 3. Confirmatory Statistics . . . . .</b>	<b>49</b>
3.1. Law of random chance and law of large numbers: hypothesis tests . . . . .	50
3.1.1. General points . . . . .	50
3.1.2. Probability laws . . . . .	51
3.1.3. Hypothesis tests . . . . .	76
3.2. Tests on means: Student's tests . . . . .	81
3.2.1. General . . . . .	81
3.2.2. Comparison of a mean and a norm . . . . .	81
3.2.3. Comparison of two observed means . . . . .	92
3.2.4. What we have learned . . . . .	97
3.2.5. Implementation of tests: use of software . . . . .	98
3.3. Analysis of variance . . . . .	99
3.3.1. General points . . . . .	99
3.3.2. ANOVA for $K > 2$ independent samples . . . . .	100
3.3.3. ANOVA for $K > 2$ matched samples: repeated measurement ANOVA . . . . .	110
3.4. Bivariate analysis: Bravais–Pearson correlation test . . . . .	111
3.4.1. General points . . . . .	111
3.4.2. Bravais–Pearson test . . . . .	112
3.4.3. Pitfalls in using linear tests . . . . .	114
3.4.4. Example of calculation . . . . .	115
3.5. Confirmatory tests for qualitative variables: $\chi^2$ and frequency comparison . . . . .	118
3.5.1. General points . . . . .	118
3.5.2. Presentation of a $\chi^2$ test: the “loaded die” . . . . .	119
3.5.3. Fitting $\chi^2$ test: general formulation . . . . .	124
3.5.4. $\chi^2$ tests of the independence of two variables . . . . .	126
3.5.5. Sample equality tests . . . . .	133
3.5.6. Intensity of the link between variables: Cramer's V . . . . .	139
<b>Chapter 4. Multivariate Analyses . . . . .</b>	<b>141</b>
4.1. Principal component analysis . . . . .	142
4.1.1. Overview . . . . .	142
4.1.2. Bivariate approach . . . . .	142

---

4.1.3. PCA 3D . . . . .	154
4.1.4. 4D examples . . . . .	162
4.1.5. Another example: study of “graduation from school” in nine European countries . . . . .	167
4.2. Factorial correspondence analyses . . . . .	173
4.2.1. Overview . . . . .	173
4.2.2. Factorial correspondence analysis . . . . .	173
4.2.3. Factorial multiple correspondence analysis . . . . .	186
<b>Chapter 5. Statistical Modeling . . . . .</b>	<b>193</b>
5.1. Simple bivariate linear modeling . . . . .	194
5.1.1. Problem statement . . . . .	194
5.1.2. Determining the regression line in the population . . . . .	195
5.1.3. Quality of representation: confidence and prediction interval . . . . .	201
5.1.4. Explanatory power of the model . . . . .	207
5.2. Multiple linear regressions for quantitative explanatory variables . . . . .	209
5.2.1. Overview . . . . .	209
5.2.2. Example: graduation from school . . . . .	211
5.2.3. Progressive development of a multivariate model . . . . .	215
5.3. Modeling with qualitative explanatory variables . . . . .	216
5.3.1. Quantitative explanatory variable and dichotomous qualitative variable . . . . .	216
5.3.2. Quantitative explanatory variable and polytomous qualitative variable . . . . .	219
5.4. Considering interactions between variables . . . . .	220
5.4.1. Overview . . . . .	220
5.4.2. Quantitative variable and dichotomous qualitative variable . . . . .	220
5.4.3. Other types of interactions . . . . .	221
5.5. Complex modeling . . . . .	223
5.5.1. Nonlinear modeling . . . . .	223
5.5.2. Multilevel approach . . . . .	226
5.5.3. Logistic regression . . . . .	227
<b>Chapter 6. Toward the Robustness in Studies in Education by the Quantitative Approach . . . . .</b>	<b>229</b>
6.1. Quantitative approach to social representations in education . . . . .	229
6.1.1. Methodological milestones of a quantitative approach to social representations . . . . .	230
6.1.2. Choice of study corpora, questionnaires and interviews . . . . .	232
6.1.3. Graphical representation methods . . . . .	233
6.1.4. Analytical model for explication of ideological loads . . . . .	237
6.1.5. Comparative analytical model . . . . .	241
6.1.6. Case study . . . . .	242

6.2. Example of a quantitative approach to relationships to knowledge . . .	248
6.2.1. From the theory of relationships to knowledge to the definition of variables. . . . .	248
6.2.2. From the definition of variables to quantitative tools . . . . .	252
6.2.3. Case study of heritage education. . . . .	254
6.2.4. Conduct a quantitative study of relationships to knowledge. . . . .	256
