Introduction	xi
Denis LEMAÎTRE	
Part 1. Innovation Design and Expectations toward Training.	1
Chapter 1. From Technological Innovation to “Situated” Innovation: Improving the Adaptation of Engineering Training to the Societal Challenges of the 21st Century.	3
Emmanuel CARDONA GIL, Linda GARDELLE and Brad TABAS	
1.1. Progress and innovation	4
1.1.1. Progress and engineer training	5
1.1.2. Progress in crisis	6
1.2. Rethinking progress	8
1.2.1. The engineer, innovation and crisis in Progress	8
1.2.2. The technical and economic paradigm and innovator training	10
1.3. Rethinking innovation and the innovator	12
1.4. Training for a “situated” innovation	14
1.5. Conclusion	17
1.6. References	18
Chapter 2. Responding to an Event: Innovation of the Contemporary Engineer?	21
Frédéric HUET, Hugues CHOPLIN, Isabelle CAILLEAU and Pierre STEINER	
2.1. From contemporary capitalism to innovation situations.	22
2.1.1. The dynamics of contemporary capitalism...	22
2.1.2. ... to new situations of innovation	24
2.2. Innovating: a transaction or inventive response?	28
2.2.1. Exploiting events: two possible interpretations	28

2.2.2. The moment of the event: experience and/or disruptive challenge .	29
2.2.3. The moment of innovation: renegotiating the problems and/or discovering the community	31
2.3. Conclusion of the event to conditions of its innovative exploitation . .	35
2.4. References	37
Chapter 3. Innovation within Companies: Changes and Impacts on Our Student Engineer Training Models	39
Christiane GILLET and Klara KÖVESI	
3.1. Introduction.	39
3.2. The transformation of innovation within contemporary companies . . .	40
3.2.1. Nature and purpose of innovation	41
3.2.2. The organization of innovation.	45
3.3. The impact of the new forms of innovation design on the training of engineers	50
3.3.1. Managerial aspect of the innovation process.	51
3.3.2. The functional aspect of the innovation process.	54
3.4. Conclusion	57
3.5. References	58
Chapter 4. Skills and Competencies for Innovators: New Priorities and Requirements for Engineering Graduates	63
Klara KÖVESI and Péter CSIZMADIA	
4.1. Introduction.	63
4.2. Which skills and competencies are needed for innovation?	65
4.2.1. Toward a holistic vision of engineers	65
4.2.2. Emergence of industry requirements	67
4.3. Industry perception of graduate engineering students	73
4.3.1. Technical competencies	74
4.3.2. Non-technical skills and competencies	76
4.4. Conclusion	80
4.5. References	82
Part 2. New Skills and Adaptation to Training Systems	85
Chapter 5. The Training of Innovators between Skill Acquisition and Construction of an Individual Socioprofessional Identity	87
Tiphaine LIU	
5.1. Introduction.	87
5.2. What is innovation? Who are the innovators?	88
5.3. The two paths for innovation training in professional education	92

5.4. Applied study of the training programs to the innovation of engineering schools	95
5.4.1. Training in innovation management	95
5.4.2. Research training on innovation	96
5.4.3. Training regarding the manufacture of new products or services	97
5.4.4. Professional training oriented toward the emergence of the innovator identity	98
5.5. What innovation training should be integrated in an engineering school?	100
5.5.1. Emancipation promotes engagement in learning	102
5.5.2. Importance of creating an environment rather than a semiclosed method (type of school)	102
5.5.3. The burden of the transformation identity by action is supported by a collective	102
5.6. Conclusion	103
5.7. References	104
Chapter 6. Innovation Training and Entrepreneurship in French Engineering Higher Education Institutions: An Investigation of the Commission des Titres d'Ingénieur.	107
Anne-Marie JOLLY and Julie NOLLAND	
6.1. Introduction.	107
6.2. Study context: CTI and engineering higher education institutions	108
6.3. Expectations regarding entrepreneurship and innovation	109
6.4. Investigation conducted within engineering higher education institutions (called "Focus").	113
6.5. Answers from the institutions	116
6.6. Pedagogical organization.	117
6.7. Resources implemented and external partnerships	120
6.8. Conclusion	121
6.9. References	122
Chapter 7. Determinants of Skill Matching among Young Hungarian Engineers	125
Péter CSIZMADIA and Zsuzsanna VEROSZTA	
7.1. Introduction.	125
7.2. Theoretical background.	126
7.3. Research question	130
7.3.1. Effect of academic performance	131
7.3.2. Effect of labor market involvement	131
7.3.3. Effect of educational background	132

7.3.4. Effect of workplace characteristics	133
7.4. Data and methods	134
7.5. Empirical findings	137
7.6. Discussion	138
7.7. Conclusions.	140
7.8. References	141
Part 3. Pedagogies of Innovation	145
Chapter 8. Swimming with Sharks without Being Eaten: How Engineering Students can Learn Creativity, Entrepreneurial Thinking and Innovation.	147
Claudius TERKOWSKY, Tobias HAERTEL, Anna-Lena ROSE, Liudvika LEISYTE and Dominik MAY	
8.1. Introduction.	147
8.2. Basic considerations regarding entrepreneurship and creativity	151
8.2.1. Entrepreneurship in higher engineering education	151
8.2.2. Contemporary concepts of engineering creativity	152
8.2.3. Deploying creativity techniques	153
8.2.4. Unleashing the courage to create by practicing breaching experiments.	155
8.3. The Shark Tank Experience tutorial	155
8.3.1. Intended learning objectives and learning activities	157
8.3.2. Grading considerations	159
8.4. Data collection, data analysis and methods reflection	160
8.5. Results.	161
8.5.1. Developing, presenting and defending a pitch	161
8.5.2. Do something unusual!	165
8.5.3. Formative evaluation.	166
8.6. Discussion	166
8.7. Prospective work	170
8.8. Conclusion	170
8.9. Acknowledgments.	171
8.10. References.	172
Chapter 9. Engaging with Heritage to Promote Innovative Thinking in Engineering Management Education	177
Jane ANDREWS and Robin CLARK	
9.1. Introduction.	178
9.2. Background: the importance of engineering education	179
9.3. Synergetic configuration: an innovative approach to engineering education.	181

9.3.1. Heritage, innovation and project management: the learning and teaching context	183
9.3.2. The P ³ Project: methodology	185
9.3.3. Innovating pedagogy and practice: the P ³ Project study findings	187
9.4. Moving forward: the application of RVS to achieve synergetic configuration and student success	192
9.5. Conclusion	194
9.6. References	195
Chapter 10. How Do Graduate Engineering Schools Train for Innovation? Study of the Curricula of Three French Schools.	199
Denis LEMAÎTRE and Christophe MORACE	
10.1. Introduction	199
10.2. The adaptation of French engineering schools to innovation	200
10.2.1. The sociohistorical context	200
10.2.2. The conceptions of innovation beginning with curricular changes	202
10.2.3. Forms of pedagogical innovation.	204
10.3. Three innovation training methods	208
10.3.1. Case studies of three engineering schools.	208
10.3.2. Presentation of the three schools	209
10.3.3. Three training methods dedicated to innovation	211
10.4. Innovation training teaching methods and logic	214
10.4.1. Three divergent approaches to innovation training	214
10.4.2. The logic at work in innovation training	216
10.4.3. The challenges of a global approach to innovation	220
10.5. Conclusion	221
10.6. References.	223
Chapter 11. Developing Methods and Programs for Teaching Innovation to Engineers: Toward Eco-Innovation?.	225
Catherine ADAM and Serge COCO	
11.1. Introduction	225
11.2. A conception of sociotechnical innovation education	226
11.2.1. A holistic approach	226
11.2.2. A systemic conception: toward eco-innovation?.	228
11.3. Modeling a system for training innovators: an empirical-inductive approach	229
11.3.1. A heuristic approach	229
11.3.2. A case study illustrating the need for interdisciplinarity	229
11.4. The mobilization of HSS within an existing program	233

11.4.1. Creating transversality by opening up the disciplines	234
11.4.2. Mobilizing HSS to establish particular skills	237
11.5. Conclusion	240
11.6. References.	240
Conclusion	243
André GRELON
