<b>Preface</b> . . . . .	xi
<b>Introduction</b> . . . . .	xiii
<b>Chapter 1. Origin of Radiation</b> . . . . .	1
1.1. Introduction. . . . .	1
1.2. The Niels Bohr model. . . . .	2
1.2.1. Illustration: excitation of the neon atom . . . . .	3
1.2.2. Illustration: mercury vapor lamps . . . . .	5
1.3. Nature of the radiating energy. . . . .	7
1.3.1. Reminders regarding the characterization of electromagnetic waves . . . . .	7
1.3.2. Electromagnetic spectrum and position of thermal radiation . . . . .	8
<b>Chapter 2. Magnitudes Used in Radiation</b> . . . . .	11
2.1. Introduction. . . . .	11
2.2. Monochromatic, total, directional and hemispherical magnitudes. . . . .	11
2.3. Absorption, reflection and transmission . . . . .	13
2.3.1. Opaque materials . . . . .	14
2.3.2. Transparent materials . . . . .	14
2.4. Total intensity of a source in one direction . . . . .	15
2.5. Total luminance of a source in one direction . . . . .	15
2.6. Illuminance of a receiving surface . . . . .	16
2.7. Examples of monochromatic magnitudes and explanation of the greenhouse effect . . . . .	16
2.7.1. Terrestrial greenhouse effect, transmissivity of atmosphere is incriminated . . . . .	18

2.7.2. The terrestrial greenhouse effect, a natural temperature controller . . . . .	19
2.7.3. The terrestrial greenhouse effect, both an asset and a risk . . . . .	19
2.8. Relations between magnitudes . . . . .	20
2.8.1. Illuminance and luminance . . . . .	20
2.8.2. Lambert's law . . . . .	21
2.8.3. Emittance and luminance in the case of isotropic emissions. . . . .	22
<b>Chapter 3. Analysis of Radiative Energy Transfers: Black-body Radiation . . . . .</b>	<b>25</b>
3.1. Introduction. . . . .	25
3.2. Definition of a black body . . . . .	25
3.3. Physical creation of the black body. . . . .	26
3.4. Black-body radiation . . . . .	27
3.4.1. Planck's law . . . . .	27
3.4.2. Stefan-Boltzmann law . . . . .	28
3.4.3. Illustration: calculating the energy emitted by a black surface . . . . .	29
3.4.4. Wien laws . . . . .	30
3.4.5. Illustration: emittance as a function of wavelength . . . . .	31
3.4.6. Evaluating emittance in a given wavelength band. . . . .	33
3.4.7. Illustration: calculating the energy radiated in the infrared . . . . .	34
3.4.8. Useful spectrum. . . . .	35
3.4.9. Illustration: determining a useful spectrum. . . . .	36
<b>Chapter 4. Radiant Properties of Real Surfaces . . . . .</b>	<b>39</b>
4.1. Introduction. . . . .	39
4.2. Emissivity of a real surface . . . . .	39
4.2.1. Total emissivity . . . . .	40
4.2.2. Monochromatic emissivity . . . . .	40
4.2.3. Emissivity data . . . . .	41
4.3. Gray body. . . . .	43
4.3.1. Density of flux emitted by a gray body . . . . .	43
4.3.2. Illustration: calculating the energy emitted by an electric heater . . . . .	43
4.4. Effective temperature of a real surface. . . . .	44
4.4.1. Calculating the effective temperature of a real surface . . . . .	44
4.4.2. Illustration: calculating the effective temperature of a gray surface . . . . .	45
4.5. Luminance of a real surface . . . . .	45
4.6. Kirchhoff's law . . . . .	46
4.6.1. Consequences for gray bodies . . . . .	46
4.6.2. Consequences for black bodies . . . . .	46
4.6.3. Illustration: simple radiation balances. . . . .	46

<b>Chapter 5. Radiation Balances between Real Surfaces Separated by a Transparent Medium</b> . . . . .	49
5.1. Introduction. . . . .	49
5.2. The angle factor . . . . .	50
5.3. Expressing the shape factor . . . . .	51
5.4. Relations between shape factors . . . . .	53
5.4.1. Reciprocity relations . . . . .	53
5.4.2. Transfer function . . . . .	54
5.4.3. Angle factors for convex or concave surfaces . . . . .	54
5.4.4. Property of the sum of the shape factors . . . . .	55
5.5. Reducing the number of shape factors to be calculated . . . . .	55
5.5.1. Reducing using symmetry. . . . .	56
5.5.2. Illustration: shape factors between the surfaces of a cylinder . . . . .	57
5.5.3. Illustration: shape factors of the surfaces forming a cube . . . . .	59
5.5.4. Illustration: using relations between shape factors . . . . .	61
5.6. Superposition principle . . . . .	64
5.6.1. Illustration: shape factors of complementary surfaces . . . . .	65
5.7. Crossed-string method: very long surfaces . . . . .	66
<b>Chapter 6. Practical Determination of Shape Factors</b> . . . . .	69
6.1. Introduction. . . . .	69
6.2. Methods of practical determination of shape factors. . . . .	69
6.2.1. Surfaces under total influence . . . . .	70
6.2.2. Illustration: angle factors for concentric spheres . . . . .	71
6.2.3. Illustration: infinite coaxial cylinders . . . . .	71
6.2.4. Illustration: shape factors for a half-sphere covering a disc . . . . .	71
6.2.5. Illustration: half-cylinder covering a rectangular plane. . . . .	72
6.3. Shape factors for standard geometric configurations . . . . .	73
6.3.1. Configuration 1: equal area parallel planes, centered on an axis . . . . .	73
6.3.2. Configuration 2: two infinite parallel planes of the same width and with the same axis . . . . .	74
6.3.3. Configuration 3: two infinite parallel planes of different widths but with the same axis . . . . .	74
6.3.4. Configuration 4: two rectangular perpendicular planes with a side in common . . . . .	75
6.3.5. Configuration 5: two planes of the same dimensions, with a side in common. . . . .	76
6.3.6. Configuration 6: two planes of different dimensions, with a side in common. . . . .	76
6.3.7. Configuration 7: two perpendicular rectangles. . . . .	77

6.3.8. Configuration 8: two parallel, off-center rectangles of arbitrary dimensions . . . . .	78
6.3.9. Configuration 9: linear strip whose plane is parallel to a rectangle . . . . .	79
6.3.10. Configuration 10: narrow linear strip whose plane is perpendicular to a rectangle . . . . .	80
6.3.11. Configuration 11: narrow linear source whose plane intersects a rectangular plane with an angle $\theta$ . . . . .	81
6.3.12. Configuration 12: elementary surface placed on the normal to a plane . . . . .	82
6.3.13. Configuration 13: elementary surface placed on a plane perpendicular to a rectangle . . . . .	83
6.3.14. Configuration 14: two parallel discs with the same axis . . . . .	84
6.3.15. Configuration 15: elementary source placed on the normal of a disc . . . . .	84
6.3.16. Configuration 16: two infinite cylinders with parallel axes . . . . .	85
6.3.17. Configuration 17: two infinite coaxial cylinders . . . . .	85
6.3.18. Configuration 18: finite coaxial cylinders . . . . .	86
6.3.19. Configuration 19: elementary source of arbitrary length, parallel to an infinite cylinder . . . . .	87
6.3.20. Configuration 20: spherical point source and sphere of radius $R$ . . . . .	88
6.3.21. Configuration 21: elementary plane and sphere of radius $R$ . . . . .	88
6.3.22. Configuration 22: elementary plane whose tangent passes through the center of a sphere . . . . .	89
6.3.23. Configuration 23: sphere and disc with the same axis . . . . .	89
6.3.24. Configuration 24: prism of infinite length and triangular cross-sectional area . . . . .	90
6.3.25. Illustration: calculating the angle factors of two planes intersecting at $45^\circ$ . . . . .	91
6.3.26. Illustration: calculating the angle factors of parallel discs . . . . .	92
6.3.27. Illustration: parallel planes, with the same axis and surface area . . . . .	93
6.3.28. Illustration: calculating the angle factor for two perpendicular, rectangular planes with a side in common . . . . .	94
6.3.29. Illustration: development of charts for inclined planes of different dimensions . . . . .	96
<b>Chapter 7. Balances of Radiative Energy Transfers between Black Surfaces . . . . .</b>	<b>99</b>
7.1. Introduction . . . . .	99
7.2. Establishing balance equations . . . . .	100
7.3. Solving radiation balances for black surfaces . . . . .	101
7.3.1. Surfaces with imposed fluxes . . . . .	102

---

7.3.2. Surfaces at imposed temperatures . . . . .	102
7.3.3. Case where certain fluxes and certain temperatures are imposed . . . . .	102
7.3.4. Illustration: radiation transfers in a baking oven. . . . .	102
7.3.5. Illustration: design of an industrial furnace with imposed temperatures . . . . .	110
<b>Chapter 8. Balances on Radiative Energy Transfers between Gray Surfaces . . . . .</b>	<b>119</b>
8.1. Introduction. . . . .	119
8.2. Reminder of the radiative properties of real surfaces . . . . .	119
8.3. Radiosity . . . . .	120
8.4. Balances on gray surfaces . . . . .	121
8.4.1. Establishing the balance on $S_i$ . . . . .	121
8.4.2. Simplifying the balance equation . . . . .	123
8.5. Solving the radiation balance equations between gray surfaces . . . . .	123
8.5.1. Surfaces with imposed fluxes. . . . .	124
8.5.2. Surfaces at imposed temperatures . . . . .	125
8.5.3. Scenario where certain fluxes and certain temperatures are imposed . . . . .	126
8.5.4. Illustration: industrial furnace with gray adiabatic walls. . . . .	128
<b>Chapter 9. Electrical Analogies in Radiation . . . . .</b>	<b>135</b>
9.1. Introduction. . . . .	135
9.2. Analogies for black surfaces. . . . .	135
9.2.1. Electrical analog representing emittances. . . . .	136
9.2.2. Electrical analog representing temperatures . . . . .	137
9.2.3. Electrical analog representing the flux density. . . . .	137
9.2.4. Illustration: calculating the flux density by electrical analogy . . . . .	138
9.3. Electrical analogies for heat transfer between gray surfaces . . . . .	139
9.3.1. Electrical analog representing radiosities. . . . .	139
9.3.2. Electrical analogy representing temperatures . . . . .	140
9.3.3. Illustration: determining net fluxes in an industrial furnace . . . . .	142
9.4. Gray shape factor . . . . .	145
9.5. Illustration: gray shape factor of the industrial furnace with adiabatic walls . . . . .	146
<b>Chapter 10. Reduction of Radiating Energy Transfers through Filtering . . . . .</b>	<b>153</b>
10.1. Introduction . . . . .	153
10.2. Expressing the flux density for a filterless transfer . . . . .	154
10.3. Reducing the flux through filtering . . . . .	156

10.4. Comparing $q_0$ and $q_m$ . . . . .	158
10.5. Scenario where plates $S_0$ and $S_n$ have the same emissivity . . . . .	159
10.5.1. Situation without filter ( $m = 0$ ) . . . . .	159
10.5.2. Situation with $m$ filters ( $m \neq 0$ ) with emissivities equal to $\epsilon$ . . . . .	159
10.5.3. Illustration: reducing radiative energy transfers through filtration . . . . .	160
<b>Chapter 11. Radiative Energy Transfers in Semi-transparent Media</b> . . . . .	163
11.1. Introduction . . . . .	163
11.2. Radiation in semi-transparent gases. . . . .	164
11.2.1. Beer's law . . . . .	165
11.2.2. Alternative expression of Beer's law. . . . .	166
11.2.3. Transmissivity of semi-transparent gases . . . . .	167
11.2.4. Transmission of energy between surfaces separated by a semi-transparent medium . . . . .	167
11.2.5. Spectral absorptivity of a semi-transparent gas. . . . .	170
11.2.6. Spectral emissivity of a semi-transparent gas. . . . .	171
11.2.7. Practical determination of parameters and radiative fluxes of semi-transparent gases. . . . .	171
11.2.8. Radiative behavior of an optically thick gas . . . . .	172
11.3. Illustration: calculating the flux radiated by combustion gases. . . . .	173
11.4. Reading: discovery of the Stefan-Boltzmann law. . . . .	174
<b>Chapter 12. Exercises and Solutions</b> . . . . .	179
<b>Appendix</b> . . . . .	247
<b>References</b> . . . . .	309
<b>Index</b> . . . . .	323
