| <b>Preface</b> . . . . .   | ix |
| <b>Introduction</b> . . . . .  | xi |
| <b>Chapter 1. Method of Moments and Fast Algorithms</b> . . . . .                    | 1  |
| 1.1. Introduction . . . . .  | 1  |
| 1.2. MoM for two illuminated scatterers . . . . .                                    | 3  |
| 1.3. Acceleration of the MoM by decomposition of domains . . . . .                   | 6  |
| 1.3.1. Extended propagation–iterative–layer–expansion . . . . .                      | 6  |
| 1.3.2. Subdomain decomposition iterative method . . . . .                            | 8  |
| 1.3.3. ACA to accelerate the coupling steps . . . . .                                | 12 |
| 1.4. Accelerations of the MoM for a rough surface . . . . .                          | 14 |
| 1.4.1. Forward–backward . . . . .  | 14 |
| 1.4.2. Forward–backward spectral acceleration . . . . .                              | 15 |
| 1.4.3. Band Matrix Iterative Approach/Canonical Grid . . . . .                       | 28 |
| <b>Chapter 2. Asymptotic Scattering Models from Rough Surfaces</b> . . . . .         | 37 |
| 2.1. Introduction . . . . .  | 37 |
| 2.2. Scattering matrix for a 3D problem . . . . .                                    | 38 |
| 2.2.1. Coordinates system and definition . . . . .                                   | 39 |
| 2.2.2. Scattering amplitude . . . . .  | 39 |
| 2.2.3. Scattering matrix . . . . .   | 41 |
| 2.2.4. Definition of the kernel from the scattering amplitude . . . . .              | 42 |
| 2.2.5. KA1 and SPM1 kernels . . . . .  | 43 |
| 2.3. Scattering matrix for a 2D problem . . . . .                                    | 45 |
| 2.3.1. Scattering amplitude . . . . .  | 45 |
| 2.3.2. Link between the Huygens’ principle and the scattering<br>amplitude . . . . . | 46 |

|   |           |
|---|-----------|
| 2.3.3. SPM1 and KA1 kernels . . . . .   | 47        |
| 2.3.4. Normalized radar cross-section (NRCS) . . . . .                                    | 49        |
| 2.4. Unified scattering models . . . . .  | 50        |
| 2.4.1. LCA2 and WCA1 kernels . . . . .  | 50        |
| 2.4.2. SSA1 and SSA2 kernels . . . . .  | 51        |
| 2.4.3. PPT kernel . . . . .   | 53        |
| 2.4.4. SPM1 and SPM2 kernels . . . . .  | 54        |
| 2.5. Incoherent component . . . . .   | 56        |
| 2.5.1. Definition of the normalized radar cross-section (NRCS) . . . . .                  | 56        |
| 2.5.2. SSA1–SSA2 incoherent component . . . . .   | 57        |
| 2.5.3. WCA1 incoherent component . . . . .  | 60        |
| 2.5.4. GO1 incoherent component with shadow . . . . .                                     | 61        |
| 2.6. Case of a Gaussian process . . . . .   | 62        |
| 2.6.1. SSA1–SSA2 incoherent component . . . . .   | 62        |
| 2.6.2. SSA1–SSA2 coherent component . . . . .   | 66        |
| 2.6.3. LCA1–LCA2 coherent and incoherent components . . . . .                             | 66        |
| 2.6.4. PPT coherent and incoherent components . . . . .                                   | 67        |
| 2.6.5. WCA1 incoherent component . . . . .  | 67        |
| 2.6.6. WCA1 coherent component . . . . .  | 70        |
| 2.6.7. SPM1–SPM2 coherent and incoherent components . . . . .                             | 71        |
| 2.6.8. Case of an isotropic surface with the first order . . . . .                        | 73        |
| 2.6.9. GO1 incoherent component . . . . .   | 75        |
| 2.7. Comparison with the MoM for a 1D Gaussian surface . . . . .                          | 75        |
| 2.7.1. Case of one realization . . . . .  | 76        |
| 2.7.2. Case of several realizations: Monte Carlo process . . . . .                        | 78        |
| 2.7.3. Further simulations . . . . .  | 83        |
| <b>Chapter 3. Applications to Airborne SHF Scattering from<br/>Sea Surfaces</b> . . . . . | <b>85</b> |
| 3.1. Introduction . . . . .   | 85        |
| 3.2. Specific case of a sea surface . . . . .   | 85        |
| 3.3. Scattering from a 1D sea surface . . . . .   | 86        |
| 3.3.1. Minimum surface length . . . . .   | 86        |
| 3.3.2. The FBSA algorithm . . . . .   | 88        |
| 3.3.3. Bistatic NRCS for one realization . . . . .  | 89        |
| 3.3.4. Bistatic and monostatic NRCS for several realizations . . . . .                    | 90        |
| 3.3.5. Comparison of the statistical formulas with FBSA . . . . .                         | 93        |
| 3.3.6. Backscattering polarization ratio . . . . .  | 97        |
| 3.3.7. Conclusion . . . . .   | 99        |
| 3.4. Scattering from a 2D sea Gaussian surface . . . . .                                  | 99        |
| 3.4.1. Bistatic NRCS with SSA1 . . . . .  | 100       |
| 3.4.2. Monostatic NRCS with SSA1 . . . . .  | 104       |
| 3.4.3. Numerical integration over the radial distance $r$ . . . . .                       | 105       |

|   |            |
|---|------------|
| 3.4.4. Bistatic and monostatic NRCS with GO1 . . . . .  | 107        |
| 3.4.5. Bistatic and monostatic NRCS with SPM1 . . . . .   | 108        |
| 3.4.6. Numerical results of the monostatic NRCS . . . . .   | 109        |
| 3.5. Scattering from a 2D sea non-Gaussian surface . . . . .  | 113        |
| 3.5.1. Monostatic NRCS from SSA1 . . . . .  | 114        |
| 3.5.2. Spectra of the skewness and peakedness functions . . . . .                                   | 115        |
| 3.5.3. Monostatic NRCS from GO1 . . . . .   | 118        |
| 3.5.4. Monostatic NRCS from SPM1 . . . . .  | 120        |
| 3.5.5. Skewness and peakedness spatial functions near the origin . . . . .                          | 121        |
| 3.5.6. Skewness and peakedness functions for any $r$ and $k$ . . . . .                              | 124        |
| 3.5.7. Closed-form expression of NRCS <sub>1</sub> . . . . .  | 126        |
| 3.5.8. Numerical results of the monostatic NRCS <sub>1</sub> . . . . .                              | 129        |
| 3.6. Scattering from an object above a 1D sea surface . . . . .                                     | 133        |
| 3.6.1. SDIM-2 (E-PILE) combined with FBSA and ACA . . . . .   | 134        |
| 3.6.2. Bistatic NRCS for one realization . . . . .  | 135        |
| 3.6.3. Conclusion . . . . .   | 139        |
| <b>Chapter 4. Application to LGA SHF Propagation and Scattering<br/>from Sea Surfaces . . . . .</b> | <b>141</b> |
| 4.1. Introduction . . . . .   | 141        |
| 4.2. PWE for an unbounded medium . . . . .  | 142        |
| 4.2.1. Derivation of PWE . . . . .  | 142        |
| 4.2.2. Spatial Green's function . . . . .   | 144        |
| 4.2.3. Fermat's principle and PWE approximation . . . . .   | 145        |
| 4.2.4. Equation of the ray path . . . . .   | 146        |
| 4.2.5. Green function and ray path of a linear profile of the refractive<br>index . . . . .         | 147        |
| 4.2.6. Green function and ray path of a parabolic profile of the refractive<br>index . . . . .      | 149        |
| 4.3. BIE–MoM versus PWE–SSF for a bounded medium . . . . .  | 151        |
| 4.4. BIE–MoM: numerical results for LGA . . . . .   | 153        |
| 4.4.1. Incident field on the surface . . . . .  | 153        |
| 4.4.2. Incident field on the surface for LGA . . . . .  | 154        |
| 4.4.3. Scattering in vacuum . . . . .   | 157        |
| 4.4.4. Propagation and scattering in a ducting environment: SDIM+<br>FBSA+ACA . . . . .             | 178        |
| <b>Chapter 5. Application to HF Propagation Above the Earth . . . . .</b>                           | <b>191</b> |
| 5.1. Introduction . . . . .   | 191        |
| 5.2. Scattering from a highly-conducting flat Earth . . . . .                                       | 192        |
| 5.2.1. Case of a homogeneous smooth Earth . . . . .   | 192        |
| 5.2.2. Case of a homogeneous rough Earth . . . . .  | 204        |
| 5.2.3. Case of an inhomogeneous rough Earth . . . . .   | 209        |

|   |     |
|---|-----|
| 5.3. Scattering from a highly-conducting circular cylinder of large radius . . . . .    | 227 |
| 5.3.1. Airy functions . . . . .   | 227 |
| 5.3.2. Roots of the ordinary differential equation<br>$w_1(t) - qw_1'(t) = 0$ . . . . . | 232 |
| 5.3.3. Attenuation function for a homogeneous surface . . . . .                         | 233 |
| 5.3.4. Attenuation function for an inhomogeneous surface . . . . .                      | 262 |
| 5.3.5. Attenuation function for non-zero height island . . . . .                        | 272 |
| <b>Appendix</b> . . . . .   | 277 |
| <b>Bibliography</b> . . . . .   | 281 |
| <b>Index</b> . . . . .  | 297 |
