Preface ix

Acknowledgements xiii

List of Notations and Acronyms xv

Chapter 1. Finite Dimensions Thermodynamics beyond Thermomechanical Systems 1

1.1. Introduction – objectives of this chapter 1
1.2. Thermoelectricity revisited according to FDT 2
1.2.1. Exo- and endoreversible thermal generator model 2
1.2.2. Particular case of internal dissipation without heat leakage 4
1.2.3. Particular case with conductive heat loss but without internal dissipation 7
1.2.4. General result of the model with internal dissipation and heat leakage 9
1.2.5. Conclusions and perspectives on thermoelectricity 11
1.3. Thermoacoustics 12
1.3.1. Model of thermoacoustic engine 12
1.3.2. Power optimization of the thermoacoustic engine 14
1.3.3. Results and conclusions 14
1.4. Photoelectric conversion 15
1.4.1. Introduction 15
1.4.2. Operating model of the photovoltaic system 18
1.5. Fuel cell 23

1.5.1. An energy system for the future 23
1.5.2. General presentation of the study 24
1.5.3. Isothermal operation at (T_0, P_0) 26
1.5.4. Adiabatic operation at (T_{ad}, P_0) 30
1.5.5. Isobaric (P_0), non-adiabatic (T) operation 32
1.5.6. Results – perspectives 34
1.6. Conclusions. 35

Chapter 2. From Machines to Systems: Complex Machines 37

2.1. Introduction: from simple to complex machines 37
2.2. Multistage machines 38
2.2.1. Multistage compression 38
2.2.2. Multistage expansion. 41
2.2.3. Multistage compression and expansion 43
2.2.4. Partial conclusion. 45
2.3. Cascade machines 46
2.3.1. Cascade Carnot engines, a reference 46
2.3.2. Cascade engines or reverse cycle machines in practice. 52
2.4. Hybrid machines. 60
2.4.1. Interest of hybrid machines 60
2.4.2. Combined CT–ST cycles 61
2.4.3. A new internal combustion engine (ICE) configuration – Stirling engine. 64
2.4.4. Further current and future possibilities 68
2.5. Conclusions and perspectives 73
2.5.1. Conclusion 1. 73
2.5.2. Conclusion 2. 73
2.5.3. Conclusion 3. 74
2.5.4. Conclusion 4. 74

Chapter 3. Toward Systems Integration. 77

3.1. Introduction: from simple useful effects to several utilities. 77
3.2. Coupling of heat exchangers. 78
3.2.1. Heat exchangers in systems and processes 78
3.2.2. Optimal adaptation of hot fluids and cold fluids. 79
3.2.3. Coupling of more than two fluids 81
3.2.4. Partial conclusion on the integration of exchangers. 83
3.3. Multiple heat effects: TFP 84
3.3.1. TFP with mechanical steam compression. 84
3.3.2. Thermodynamic model of the TFP 84

3.3.3. Revisiting efficiency criteria according to thermodynamics 87
3.3.4. Application to TFP optimization 90
3.3.5. Several conclusions and perspectives for the TFP. 93
3.4. Useful heat and mechanical effects: cogeneration 93
3.4.1. Brief state of the art of hot cogeneration 94
3.4.2. Model of a Carnot cogenerator – first approach 94
3.4.3. Model of a Carnot cogenerator according to FDT. 98
3.4.4. Other cogenerators 107
3.4.5. Essential conclusions and perspectives 111
3.5. Trigeneration 112
3.5.1. Model of trigeneration in finite dimensions 112
3.5.2. Efficiency criteria revisited 114
3.5.3. Several results 115
3.5.4. Conclusion 117
3.6. Generalization: polygeneration – system integration 118
3.6.1. Polygeneration 118
3.6.2. Toward systems integration 119
3.6.3. Integration in the environment 119

Chapter 4. E^E, E Exponent E 121

4.1. Introduction: new trends in thermodynamics 121
4.2. Energy analysis 121
4.3. Entropy analysis 123
4.3.1. Equations of the entropy balance. 123
4.3.2. Minimization of entropy production. 124
4.3.3. Example: the generic model of the thermomechanical machine in trigeneration 126
4.3.4. Several extensions and contributions 127
4.4. Exergy analysis 127
4.4.1. Exergy balance 127
4.4.2. A brief history and extensions 128
4.5. Economy and thermodynamics 129
4.5.1. Thermoeconomy 129
4.5.2. Various costs 130
4.5.3. Economic optimizations: various criteria 132
4.5.4. Simple energy-economic examples 133
4.5.5. Partial conclusions – perspectives 136
4.6. New trends 138
4.6.1. Relativistic thermodynamics 138
4.6.2. Emergy 140

4.6.3. Entransy 142
4.6.4. Constructal theory 154
4.7. Conclusion of the chapter 156
4.7.1. Synthesis 156
4.7.2. A simple example of transfer–conversion compromise 157

Conclusion 159

Appendices 173

Appendix 1 175

Appendix 2 179
