<b>Preface</b> . . . . .	ix
<b>Chapter 1. Challenges Involving Ad Hoc Communications on the Road</b> . . . . .	1
1.1. Introduction . . . . .	1
1.2. The railway experience in the vehicular networks of the future . . . . .	2
1.3. The contribution of ad hoc communications to vehicular networks . . . . .	4
1.3.1. Maintaining connectivity and service continuity . . . . .	5
1.3.2. Cooperation and performance improvement . . . . .	6
1.3.3. Communications security and auditing . . . . .	7
1.3.4. Technological evolution and depreciation . . . . .	9
1.3.5. European harmonization . . . . .	9
1.4. Conclusion . . . . .	10
1.5. References . . . . .	10
<b>Chapter 2. Functional Approach to Protocol Design</b> . . . . .	11
2.1. Introduction . . . . .	11
2.2. Ad hoc routing protocol basics . . . . .	13
2.2.1. Routing definition . . . . .	13
2.2.2. Destination node identification . . . . .	14
2.2.3. Route discovery and selection . . . . .	15
2.2.4. Network topology discovery . . . . .	19
2.3. A few strategies adopted by ad hoc routing protocols . . . . .	21
2.3.1. Protocol strategies for establishing links . . . . .	21
2.3.2. Protocol strategies in request dissemination . . . . .	25
2.4. Ad hoc routing protocols for road traffic . . . . .	29

---

2.4.1. Transposition of protocols from mobile ad hoc networks . . . . .	29
2.4.2. Strategies and considerations for the road environment . . . . .	30
2.4.3. Routing policies and quality of service metrics . . . . .	39
2.5. Functional design approach: concepts and case study . . . . .	42
2.5.1. Idea and approach . . . . .	42
2.5.2. Overview of the case study protocol: <i>Chain-Branch-Leaf</i> . . . . .	46
2.5.3. Modeling CBL in OLSR: CBL-OLSR . . . . .	55
2.6. Conclusion . . . . .	59
2.7. References . . . . .	61
<b>Chapter 3. Models and Simulations for Performance Analysis . . . . .</b>	<b>71</b>
3.1. Introduction . . . . .	71
3.2. Choice of road context and radio technology . . . . .	75
3.3. Modeling and simulation tools for VANETs . . . . .	78
3.3.1. Radio wave propagation model . . . . .	80
3.3.2. Models for obtaining vehicle traces . . . . .	85
3.3.3. Mobility simulators . . . . .	89
3.3.4. Communication network simulators . . . . .	91
3.3.5. VANET simulators . . . . .	94
3.4. Choice of modeling and simulation tools . . . . .	96
3.5. Definition of mobility scenarios in a highway context: example of the construction of mobility models . . . . .	97
3.5.1. Mobility modeling with OPNET <i>Riverbed Modeler</i> . . . . .	106
3.6. Transmission modeling . . . . .	119
3.6.1. Choice of technology for frame transmission . . . . .	119
3.6.2. Parametrization of an 802.11p node under OPNET <i>Riverbed Modeler</i> . . . . .	122
3.6.3. Modeling the propagation channel . . . . .	122
3.6.4. Modeling the CBL-OLSR protocol in 802.11p nodes . . . . .	125
3.7. Conclusion . . . . .	126
3.8. References . . . . .	127
<b>Chapter 4. Performance Evaluation of the Protocol for Collaborative Applications . . . . .</b>	<b>139</b>
4.1. Study background . . . . .	139
4.2. Configuration of the mobile nodes . . . . .	143
4.3. Validation of the CBL-OLSR implementation in OPNET <i>Riverbed Modeler</i> . . . . .	147
4.3.1. Structural verification . . . . .	147
4.3.2. Analysis of routing traffic generated by CBL-OLSR versus OLSR . . . . .	150
4.3.3. Sensitivity to the propagation model . . . . .	154

4.4. CBL-OLSR system performance analysis with transfer of application data . . . . .	156
4.4.1. Introduction to collaborative perception and ego-localization applications . . . . .	156
4.4.2. Comparative analysis of CBL-OLSR with OLSR and AODV for <i>unicast mode</i> data transmission . . . . .	159
4.4.3. Performance evaluation of an extended perception application . . . . .	176
4.4.4. Multiple applications: extended perception and collaborative distributed localization . . . . .	181
4.5. Conclusion . . . . .	187
4.6. References . . . . .	189
<b>Chapter 5. Formal Model for the Analysis of the Properties of the Protocol . . . . .</b>	<b>193</b>
5.1. Introduction . . . . .	193
5.2. The contribution of formal methods to protocol engineering . . . . .	194
5.3. The Event-B method . . . . .	195
5.3.1. Mathematical concepts and notations of the Event-B method . . . . .	195
5.3.2. Event-B model structure . . . . .	196
5.3.3. Refinement concept . . . . .	197
5.3.4. Event-B model correction . . . . .	197
5.4. Formal approach applied to the protocol of the case study . . . . .	198
5.4.1. Formal description of the organization by CBL in a VANET . . . . .	199
5.4.2. CBL rules and properties in a VANET . . . . .	202
5.5. A correct-by-construction model of CBL with Event-B . . . . .	204
5.5.1. Level 1: basic model for any routing protocol . . . . .	204
5.5.2. Level 2: mobility and communications modeling . . . . .	207
5.5.3. Level 3: CBL rules and properties modeling . . . . .	212
5.6. Model validation . . . . .	218
5.6.1. Model validation by animation . . . . .	218
5.6.2. Model correction by offloading proof obligations . . . . .	220
5.7. Conclusion . . . . .	223
5.8. References . . . . .	224
<b>Chapter 6. Integration of Ad Hoc Components in a Global Infrastructure . . . . .</b>	<b>227</b>
6.1. Introduction . . . . .	227
6.2. Ensuring connectivity and services . . . . .	227
6.3. Cooperation and performance improvement . . . . .	229

6.4. Evolution of design and evaluation methods . . . . .	231
6.5. Conclusion . . . . .	238
6.6. References . . . . .	239
<b>List of Authors</b> . . . . .	<b>241</b>
<b>Index</b> . . . . .	<b>243</b>
