Introduction	ix
Chapter 1. Design and Implementation of Automated Atlas	1
Boris MERICKSKAY	
1.1. From map to atlas	1
1.2. Automation of maps and indicators.	2
1.2.1. Step 1: atlas template designing	4
1.2.2. Step 2: data preparation and indicators creation	4
1.2.3. Step 3: atlas implementation in QGIS project	8
1.2.4. Step 4: atlas implementation in print composer	13
1.2.5. Step 5: atlas publication	16
1.3. Implementation of the application	17
1.3.1. Software and data.	17
1.3.2. Step 2: data preparation and indicators creation	19
1.3.3. Step 3: atlas implementation in QGIS project	25
1.3.4. Step 4: atlas implementation in print composer	29
1.3.5. Step 5: atlas publication	37
Chapter 2. Estimation of Land Use Efficiency from the Global Human Settlement Layer (GHSL)	39
Christina CORBANE, Panagiotis POLITIS, Martino PESARESI, Thomas KEMPER and Alice SIRAGUSA	
2.1. Context	39
2.2. The Land Use Efficiency (LUE)	40
2.3. Installation of the LUE indicator calculation tool	41
2.4. Method to calculate the LUE indicator.	42
2.4.1. Preparation of the input layer	44
2.4.2. Delimitation of the area of interest and clip of input data	45

2.4.3. Calculation of the LUE indicator	47
2.4.4. Visualization and analysis of the results	48
2.4.5. One possible interpretation	50
2.5. Limits of the method	51
2.6. Bibliography	52
Chapter 3. Characterizing Urban Morphology for Urban Climate Simulation Based on a GIS Approach	53
Justin EMERY, Julita DUDEK, Ludovic GRANJON, Benjamin POHL, Yves RICHARD, Thomas THEVENIN and Nadège MARTINY	
3.1. The city–climate relationship through urban climate modeling	53
3.2. Representation of the urban space	56
3.2.1. Step 1: integrate urban morphology in a DTM.	59
3.2.2. Step 2: generate land use in a urban space	62
3.2.3. Step 3: calculate the anthropization index	71
3.2.4. Discussions and perspectives: contribution of remote sensing to vegetation mapping	73
3.3. Practical case study of the processing chain.	76
3.3.1. Software and database	76
3.3.2. Step 1: integrate the building heights into a DTM.	77
3.3.3. Step 2: geographic data generation about natural and artificial areas	80
3.3.4. Step 3: calculation of the anthropization index	88
3.4. Bibliography	90
Chapter 4. Airborne Optical Remote Sensing Potential for Pool Mapping in an Urban Environment	93
Josselin AVAL and Thierry ERUDEL	
4.1. Context	93
4.2. Method	94
4.2.1. Data acquisition and preprocessing	96
4.2.2. Reference map definition	99
4.2.3. Feature extraction.	101
4.2.4. Classification	103
4.2.5. Building a prediction map.	107
4.2.6. Performance assessment.	107
4.2.7. Limits of the proposed method	108
4.3. Implementation of the application	109
4.3.1. Software and data.	109
4.3.2. Step 1: creation of a georeferenced image	110
4.3.3. Step 2: building a reference map	114
4.3.4. Step 3: classification and prediction map.	116
4.4. Bibliography	122

Chapter 5. Automation of Workflows for the Installation of a Wind Farm	125
Boris MERICKSKAY	
5.1. Automation of workflows	125
5.2. Automation of workflows for the installation of a wind farm in Brittany	126
5.2.1. Step 1: download data with WFSs	127
5.2.2. Step 2: preparation of the population grid dataset	130
5.2.3. Step 3: identification of inhabited areas.	131
5.2.4. Step 4: consideration of protected areas.	134
5.2.5. Step 5: consideration of regional wind policy and wind energy criteria.	137
5.2.6. Step 6: proximity to power lines	139
5.3. Implementation of the application	142
5.3.1. Software and data.	142
5.3.2. Step 1: downloading datasets	145
5.3.3. Step 2: preparation of population grid dataset	149
5.3.4. Step 3: identification of inhabited areas.	154
5.3.5. Step 4: consideration of protected areas.	157
5.3.6. Step 5: consideration of the regional wind policy and wind energy criteria.	162
5.3.7. Step 6: consideration of proximity to power lines.	165
 Chapter 6. Ecosystemic Services Assessment: Application to Forests for the Preservation of Water Resources in Tropical Islands.	169
Rémi ANDREOLI and Brice VAN HAAREN	
6.1. Definition and context	169
6.2. Method	170
6.2.1. Water catchment perimeter database (PPE) preparation	172
6.2.2. Soil stabilization criterion: the erosion hazard parameter	174
6.2.3. Water regulation criterion and ecosystem degradation: the dominant vegetation parameter	177
6.2.4. Resilience criterion: forest fragmentation parameter	181
6.2.5. Assessment of the forest function in the PPE	186
6.2.6. Limits.	188
6.3. Forest function assessment implementation.	188
6.3.1. Software and data.	188
6.3.2. Step 1: PPE polygons creation	190
6.3.3. Step 2: erosion hazard parameter determination.	199

6.3.4. Step 3: dominant vegetation type parameter determination	205
6.3.5. Step 4: forest fragmentation parameter	216
6.3.6. Step 5: forest function assessment for water protection	231
6.4. Bibliography	234
Chapter 7. Assessing the Influence of Landscape on Biodiversity Using the QGIS Plugin LecoS	239
Sylvie LADET, David SHEEREN, Pierre-Alexis HERRAULT and Mathieu FAUVEL	
7.1. Introduction.	239
7.2. Principle of the approach.	239
7.3. Materials and methods	242
7.3.1. Step 1: land cover map.	242
7.3.2. Step 2: definition of the relevant landscape descriptors	244
7.3.3. Step 3: statistical modeling	246
7.4. Application of the processing chain: effect of landscape on forest bird diversity	247
7.4.1. “Birds” data and the variable to be explained	247
7.4.2. “Landscape” data and the explanatory variables.	248
7.4.3. Implementation in QGIS environment	250
7.5. Acknowledgments.	262
7.6. Bibliography	262
List of Authors	265
Index	269
Scientific Committee	271
