<b>Introduction</b> . . . . .	xi
<b>Chapter 1. Quantum Physics and Information</b> . . . . .	1
1.1. Orthodox introduction to quantum physics . . . . .	1
1.2. Quantum states or how nature communicates with physicists . . . . .	6
1.3. Particles, information, evolution . . . . .	10
1.4. Interpretation of Pauli's exclusion principle . . . . .	12
1.5. State vectors, science of orientations . . . . .	14
1.6. Provisional conclusions on quantum mechanics . . . . .	18
<b>Chapter 2. Two Quantum Studies</b> . . . . .	21
2.1. Does the quantum universe observe us? . . . . .	21
2.2. A detour by statistical mechanics . . . . .	24
2.3. Expressive and receptive waves in quantum observation . . . . .	25
2.4. Wave function fission . . . . .	27
2.5. Form–energy duality in Schrödinger's equation . . . . .	29
2.5.1. Separation of spatial and temporal functions . . . . .	29
2.5.2. Solution to the equation and quantum formalization of the hydrogen atom . . . . .	31
2.5.3. Form–energy diagram and correspondences . . . . .	32
2.5.4. Form and content in the quantum atom . . . . .	33

<b>Chapter 3. Quantum Entanglement</b> . . . . .	35
3.1. Some considerations on quantum entanglement . . . . .	35
3.2. The mystery of quantum entanglement. . . . .	37
3.3. Quantum entanglement and complex sciences: information and system. . . . .	42
3.4. Concluding remark about strange information . . . . .	45
<b>Chapter 4. Quantum Darwinism and the Macroscopic World</b> . . . . .	47
4.1. Quantum Darwinism, from quantum to the observable world . . . . .	47
4.2. The controversy between W. Zurek and R. Kastner . . . . .	50
4.3. Understanding our classical perception with quantum physics, an anthropomorphic approach . . . . .	53
4.4. From quantum substantial matter to spatiotemporal extension. . . . .	56
<b>Chapter 5. Chemistry and Quantum Communications</b> . . . . .	59
5.1. Brief epistemological notes . . . . .	59
5.2. Chemistry, a little-known science that studies bondings and reactions . . . . .	60
5.3. Orbitals and waves make bonding improbable . . . . .	64
5.3.1. The electron takes part in the bond, but there is no bond . . . . .	64
5.3.2. The molecule in question . . . . .	66
5.4. Quantum bond, orbitals and monadological conception of chemistry . . . . .	68
5.4.1. The theory of molecular orbitals in chemistry . . . . .	68
5.4.2. Monadology, bonding and non-bonding orbitals . . . . .	70
5.5. Molecular quantum communication . . . . .	72
<b>Chapter 6. Emergences in Matter</b> . . . . .	75
6.1. Introduction about emergence . . . . .	75
6.2. The central conjecture in emergence theory. . . . .	78
6.3. Physics, emergence ontology and communications . . . . .	80

6.4. Quantum and information in the emergences of condensed matter . . . . .	83
6.4.1. Material emergences and physical sciences . . . . .	83
6.4.2. New horizons in the physics of condensed matter . . . . .	85
6.4.3. Matter and information according to Xiao-Gang Wen. . . . .	86
6.5. Tensor networks . . . . .	89
6.5.1. The tools of statistical physics . . . . .	89
6.5.2. The complicated invisible behind the visible . . . . .	90
<b>Chapter 7. Communication and Emergence Fields . . . . .</b>	<b>95</b>
7.1. Communication fields . . . . .	95
7.1.1. Quantum communications . . . . .	95
7.1.2. Morphogenetic field or communication field? . . . . .	97
7.2. Are communication fields structured by quantum matter? . . . . .	98
7.2.1. The field as a physical concept . . . . .	98
7.2.2. The Lagrangian and the symmetries, main access door for studying fields as emergences . . . . .	99
7.3. Is there a relation between quantified fields and emergences? . . . . .	101
7.4. Brief overview of matter and emergences in contemporary physics . . . . .	105
7.4.1. Dissipative structures . . . . .	106
7.4.2. Condensed matter and exotic phases . . . . .	107
7.4.3. Quantified fields or the emerging “material cosmos” . . . . .	108
7.4.4. Exotic phases and the model with topology and entanglement . . . . .	109
7.4.5. Overview, from Plotinus’ two categories of matter to quantum materiality . . . . .	109
7.5. Philosophy and the physics of communicational emergence . . . . .	110
7.6. Emergences and molecular communication in the living . . . . .	111
7.7. Different considerations about language and the emergence of goal-oriented societies . . . . .	114
7.7.1. Language, civilizations and human enterprises . . . . .	115
7.7.2. The myth of Babel, communicating and building . . . . .	116
7.7.3. Language structures . . . . .	118
7.7.4. Language levels . . . . .	120
7.8. Brief notes about the semantic field . . . . .	121

---

<b>Chapter 8. The Computer, from Physics to Biology</b> . . . . .	123
8.1. Computer and information in the 21st Century science . . . . .	123
8.2. The research by David Deutsch and Seth Lloyd concerning the quantum calculator . . . . .	125
8.3. Seth Lloyd and quantum order in the universe . . . . .	128
8.4. Going beyond the theory of information: the resonance coupling principle . . . . .	131
8.5. From the biological to the physical . . . . .	132
8.5.1. From biology to informed physics: an original pathway offered by Paul Davies . . . . .	133
8.5.2. Biology and networks: questioning emergence with information and entropy . . . . .	134
8.5.3. Information and networks, theoretical limitations and metaphysical options . . . . .	137
8.6. <i>Kronos</i> , <i>Telos</i> and the evolution of living emergences . . . . .	138
<b>Chapter 9. Time Philosophies:</b>	
<b><i>Kronos</i>, <i>Telos</i>, <i>Kosmos</i></b> . . . . .	141
9.1. Time is plural, as it is enigmatic. . . . .	141
9.2. The “qualities” of time: an excursion through Eastern thought . . . . .	144
9.3. Aristotle . . . . .	147
9.4. Leibniz. . . . .	149
9.5. Being, time, things. . . . .	152
9.6. Things in modern science . . . . .	155
9.7. Hegel, Nietzsche, Heidegger: three prophets of time . . . . .	158
9.7.1. Hegel and the dialectic resolution of <i>Kronos</i> with <i>Telos</i> . . . . .	159
9.7.2. Nietzsche and <i>Kronos</i> transmuted into <i>Telos</i> . . . . .	160
9.7.3. Husserl, the world and <i>Kosmos</i> -based objects . . . . .	161
9.7.4. Heidegger and the quest for <i>Kosmos</i> . . . . .	162
9.7.5. Emerging <i>Logos</i> and <i>Telos</i> in the end times . . . . .	164
<b>Chapter 10. The Arrows of Time and Emergence</b> . . . . .	167
10.1. The three categories of time and contemporary physics . . . . .	167
10.2. Noise, temperature, entropy, time arrow . . . . .	170
10.3. The effect of temperature on emerging order . . . . .	173

10.4. Order and the arrow of time . . . . .	176
10.4.1. Entropy and disorder. . . . .	176
10.4.2. Prigogine and irreversibility . . . . .	178
10.5. From <i>Kronos</i> to <i>Telos</i> , irreversibility and the two arrows of material time . . . . .	181
10.5.1. The RHS from the Brussels-Austin school. . . . .	181
10.5.2. The two orientations of time and the metamorphosis of modern physics . . . . .	184
10.5.3. The arrow of <i>Kosmos</i> ; mechanics and thermodynamics . . . . .	187
10.6. <i>Kosmos</i> , <i>Kronos</i> and <i>Telos</i> . . . . .	188
10.7. Concluding remark on physics and things. . . . .	191
10.8. From the history of black holes to the light of time . . . . .	193
<b>Chapter 11. Mesoscopic and Macroscopic . . . . .</b>	<b>199</b>
11.1. Between infrascopic and macroscopic quantum, the mesoscopic order . . . . .	199
11.2. Horizontal and vertical emergences . . . . .	202
11.3. The signals associated with emergences. . . . .	204
11.3.1. Infrascopic fundamental matter and quantum interactions. . . . .	205
11.3.2. Condensed matter and mesophysical emergences. . . . .	205
11.3.3. Molecular matter . . . . .	206
11.3.4. Life at the mesoscopic level . . . . .	206
11.3.5. Macrobiology and macroscopic emergences. . . . .	208
11.3.6. Human societies and communicating forms . . . . .	210
11.3.7. Ordering and interpreting systems in human emergences . . . . .	211
11.4. Biosemiotics, emergences and evolution . . . . .	212
11.5. Physicalism and mental processes . . . . .	217
11.6. Some considerations on emergent worlds. . . . .	219
11.6.1. Gravity, AdS/CFT, megascopic emergence cosmos. . . . .	219
11.6.2. The emergence of the sacred and Being . . . . .	221
11.7. The order of time at the four scales of the universe . . . . .	222
<b>Chapter 12. Epilogue on Forthcoming Science . . . . .</b>	<b>225</b>
12.1. Modernity is achieved . . . . .	225
12.2. Unfinished notes on the cosmos, physics and metaphysics . . . . .	228

12.3. Communicational emergences represented in a figure . . . . .	230
12.4. The metamorphosis of the subject . . . . .	231
12.5. From <i>Kosmos</i> to <i>Logos</i> . . . . .	232
12.6. Epilogue on three ongoing scientific revolutions . . . . .	233
<b>Conclusion</b> . . . . .	237
<b>Bibliography</b> . . . . .	241
<b>Index</b> . . . . .	245
