
Contents

| | |
|---|-----|
| Introduction | vii |
| Chapter 1. Mineralized Tissues | 1 |
| 1.1. Dental structure and tissues | 1 |
| 1.2. Enameloid: a problematic tissue | 2 |
| 1.3. Histology and variation | 3 |
| 1.4. Developmental origin and mineralization | 7 |
| 1.5. Dentin. | 14 |
| 1.6. Homology of enameloid tissues | 16 |
| Chapter 2. Paleozoic Sharks | 19 |
| 2.1. Do all Paleozoic shark teeth possess enameloid? | 19 |
| 2.2. Ctenacanth sharks | 28 |
| Chapter 3. Hybodont Sharks | 33 |
| 3.1. Enameloid microstructure in hybodont teeth | 34 |
| 3.2. Development of specialized tooth structures and associated changes in the enameloid microstructure | 39 |
| 3.3. The mysterious <i>Ptychodus</i> | 43 |
| 3.4. Conclusion | 45 |

| | |
|--|-----|
| Chapter 4. Enameloid Microstructure in Rays | 47 |
| 4.1. The phylogenetic position of skates and rays within the neoselachians. | 47 |
| 4.2. Historical context | 48 |
| 4.3. Batomorph enameloid: diversity and evolution. | 49 |
| 4.4. Durophagy and other trophic specializations. | 54 |
| Chapter 5. Enameloid Microstructure Diversity in Modern Shark Teeth | 61 |
| 5.1. Diversity and evolution of structures | 62 |
| 5.2. Serrated teeth and mega-predation | 73 |
| 5.3. Example of adaptation to durophagy: bullhead sharks | 77 |
| Chapter 6. Comparison of Enameloid Microstructure in Actinopterygian and Elasmobranch Teeth | 81 |
| 6.1. Ganoine and acrodine | 81 |
| 6.2. Comparison of acrodin and elasmobranch enameloid | 84 |
| Conclusion | 97 |
| Glossary | 105 |
| Bibliography | 111 |
| Index | 127 |
