Preface	xi
List of Acronyms	xiii
Introduction	xxi
Chapter 1. Shannon's Theorem in Classic Data Processing	1
1.1. Introduction	1
1.2. Shannon's theorem	2
1.3. Shannon's Capacity channel	5
1.4. Sampling	6
1.5. Shannon's theorem in cryptography	7
Chapter 2. Shannon's Theorem in Quantum Data	9
2.1. Introduction	9
2.2. Definition of quantum entropy	11
2.3. The Holevo bound	11
2.4. Quantum aspects of compressed sensing	11
2.5. Compressibility and capacity	12
2.6. Conclusion	15
Chapter 3. Sparse Signals and Compressed Sensing	17
3.1. Introduction	17
3.2. Definition of sparse decomposition	17
3.3. Sparse signals	18

3.4. Compressed sensing and optimization	19
3.5. Reconstructing the sparse signal	20
Chapter 4. Compressed Sensing and the Fourier Transform	23
4.1. Introduction	23
4.2. Fast SFT	24
4.3. Random matrices in compressed sensing	27
4.3.1. Gaussian measurements	29
4.3.2. Binary measurements	29
4.3.3. Fourier measurements	30
4.3.4. Incoherent measurements	30
4.4. Conclusion	31
Chapter 5. Compressed Sensing and Entanglement	33
5.1. Introduction	33
5.2. Uncertainty relationships	34
5.3. Phantom images	34
5.4. Sparsity in practice	35
5.5. Chaotic and quantum encryption software	36
5.5.1. Introduction	36
5.5.2. The software's content	36
Chapter 6. Compressed Sensing and Intelligent LiFi Systems	39
6.1. Introduction	39
6.2. Using intelligent LiFi systems	40
6.2.1. Electronic WAVIX map	41
6.2.2. Applying the WAVIX map	41
6.2.3. Supply	47
6.3. GPS input	51
6.3.1. Designing the receiving and decoding system	52
6.4. The WAVIX map	57
6.4.1. Decoder	57
6.4.2. Implanting components	59
6.4.3. Building the decoder	60
6.5. The decoder's performance	64
6.5.1. Home page	64
6.5.2. Frame reception page	65
6.6. Final design of the reception and decoding system	67

Chapter 7. Compressed Sensing in LiFi Systems in Mobile Communications and Cryptography	69
7.1. Introduction	69
7.2. Applications in digital communications: estimating the channel in OFDM systems	72
7.2.1. Introduction	73
7.2.2. Interpreting time–frequency and pilot distribution	75
7.2.3. Estimating the block-type channel	77
7.2.4. Estimating the channel by LS	78
7.2.5. Estimating the channel by minimal mean quadratic error	79
7.2.6. Estimating the comb-type channel	80
7.2.7. LS estimator with 1D interpolation	82
7.2.8. Maximum likelihood estimator	84
7.2.9. PCMB estimator	84
7.3. An application in cryptography: the SAC–OCDMA system	86
7.3.1. Introduction	86
7.3.2. The concept of code	87
7.3.3. Digital analysis of the MFCC code’s performances	90
7.3.4. Results and discussions	93
7.6. Conclusion	97
Chapter 8. Compressed Sensing in WiFi Systems	99
8.1. Preliminaries on compressed sensing in WiFi systems	99
8.2. Interconnection of WiMAX mobile and satellite DVB-S/RCS networks	102
8.2.1. Introduction	102
8.2.2. Satellite: a communication tool	103
8.2.3. The DVB norm	104
8.2.4. Satellite networks	107
8.2.5. Transmission chain	112
8.2.6. Satellite system (DVB-RCS).	114
8.2.7. Protocol stack	116
8.2.8. Physical layer	117
8.2.9. Access method	119
8.2.10. Deploying IP by satellite IPoS	121
8.2.11. Methods of encapsulating IP packets	122
8.2.12. ULE encapsulation and header extensions	122
8.2.13. Interconnection of WiMAX mobile and satellite DVB-S networks: RCS.	124
8.2.14. Interconnection model and mobility scenarios	124

8.2.15. Simulation scenarios	125
8.2.16. Results.	130
8.2.17. Discussion of the results	135
8.2.18. Conclusion	136
Chapter 9. Compressed Sensing in Interconnections Covering WiMAX, UMTS and MANET Satellite Networks	137
9.1. Introduction.	137
9.2. Heterogeneous networks	138
9.3. Demands of heterogeneous networks.	138
9.3.1. Demands on the network core	139
9.4. Other interconnection methods	144
9.4.1. The interconnection suggested by the 3GPP project	144
9.4.2. Interconnection suggested by the IEEE	145
9.4.3. The IEEE 802.21 standard.	146
9.5. Transparency in communications	149
9.5.1. The process of decision-making for triggering an inter-network handover	149
9.5.2. Mobile-controlled handover (MCHO).	150
9.5.3. Network-controlled handover (NCHO)	150
9.5.4. Mobile-assisted handover (MAHO)	150
9.5.5. Network-assisted handover (NAHO)	150
9.6. Classes of service	151
9.6.1. Conversational services	151
9.6.2. Interactive classes of service	151
9.6.3. Services in the streaming class	152
9.6.4. Background class services	152
9.7. Interconnection covering satellite, WiMAX, UMTS and MANET networks	152
9.7.1. Interconnection models	153
9.7.2. Simulation scenarios	154
9.7.3. Simulation parameters	156
9.7.4. Performance criteria	156
9.8. The results	157
9.9. Discussion of results.	159
9.10. Conclusion.	160
Chapter 10. Compressed Sensing in Radar Interferometry	163
10.1. Formatting inferograms	163

10.1.1. Registration	164
10.2. SWR synthesis	164
10.3. Geometric deformation.	165
10.4. Re-sampling	167
10.5. Geometric interpretation of the registration.	168
10.5.1. Resulting images	169
10.5.2. Eliminating orbital fringes	170
10.6. Simulated inferograms	172
10.6.1. Performances in terms of distorted regions	175
10.6.2. Performances in terms of RMSE.	177
10.7. Methods for minimizing norms	178
10.7.1. L^p norms	178
10.7.2. L^2 norm.	179
10.7.3. L^1 norm.	180
10.7.4. Small value norms of p	180
10.8. Conclusion	180
Chapter 11. Compressed Sensing in Radars	183
11.1. Introduction	183
11.2. Description of the system	186
11.3. System analysis	188
11.3.1. Transmitter	188
11.3.2. The receiver	189
11.4. Transmission channel.	190
11.5. Decision variables.	190
11.6. ANN-CFAR detector	195
11.6.1. Learning phase	197
11.6.2. Learning algorithm.	197
11.6.3. Validation phase	199
11.7. Probability of detection and of false alarm	199
11.8. Mean acquisition time	200
11.9. Results and discussions.	200
11.10. Conclusion	210
Chapter 12. Compressed Sensing in Electromagnetism	211
12.1. Introduction	211
12.2. Compressed sensing in electromagnetism.	211
12.3. Application of compressed sensing and electromagnetism: a solution for diffusion using an arbitrarily formed conductive structure by the moment method.	214

12.3.1. Introduction	214
12.3.2. Matric formulation	214
12.3.3. Convergence of the method of moments	219
12.3.4. The solution's non-uniqueness	220
12.3.5. Application on a sphere	220
12.3.6. Conclusion	227
Conclusion	229
Bibliography	231
Index	257
