Introduction	ix
Chapter 1. Background and Contextual Study	1
1.1. Introduction	1
1.2. Subjective test	2
1.2.1. Controlled environment approach	3
1.2.2. Uncontrolled environment approach	5
1.3. HTTP-based video streaming technologies	6
1.3.1. Video streaming method	8
1.3.2. Adaptive video delivery components	9
1.4. HTTP-based adaptive video streaming methods	10
1.4.1. Traditional streaming versus adaptive streaming	11
1.4.2. Adobe's HTTP Dynamic Streaming (HDS)	15
1.4.3. Microsoft Smooth Streaming (MSS)	15
1.4.4. Apple's HTTP Live Streaming (HLS)	17
1.4.5. MPEG's Dynamic Adaptive Streaming over HTTP (DASH)	18
1.5. Scheduling and power-saving methods	21
1.5.1. Scheduling methods	21
1.5.2. DRX power-saving method	23
Chapter 2. Methodologies for Subjective Video Streaming QoE Assessment	27
2.1. Introduction	27
2.2. Metrics affecting the QoE	28

2.2.1. Network parameters	29
2.2.2. Video characteristics	30
2.2.3. Terminal types	30
2.2.4. Psychological factors	32
2.3. Machine learning classification methods	33
2.3.1. Naive Bayes	34
2.3.2. Support vector machines	34
2.3.3. K-nearest neighbors	34
2.3.4. Decision tree	35
2.3.5. Random forest	35
2.3.6. Neural networks	35
2.4. Experimental environment for QoE assessment	36
2.4.1. Controlled environment approach	36
2.4.2. Crowdsourcing environment approach	37
2.5. Testbed experiment	38
2.5.1. Experimental setup	39
2.5.2. Data analysis using ML methods	41
2.6. Analysis of users' profiles	44
2.6.1. Case 1: interesting and non-interesting video contents	44
2.6.2. Case 2: frequency, HD and non-HD video content	46
2.7. Crowdsourcing method	50
2.7.1. Crowdsourcing framework	50
2.7.2. Framework architecture	52
2.7.3. Firefox extension	53
2.7.4. Java application	54
2.8. Conclusion	55
Chapter 3. Regulating QoE for Adaptive Video Streaming	59
3.1. Introduction	59
3.2. Adaptive streaming architecture	62
3.3. Video encoding	66
3.4. Client–server communication	68
3.5. Rate-adaptive algorithm	69
3.6. System model	71
3.7. Proposed BBF method	74

3.8. Experimental setup	80
3.9. Results	80
3.10. Conclusion	89

Chapter 4. QoE-based Power Efficient LTE

Downlink Scheduler	91
4.1. Introduction	92
4.2. An overview of LTE	95
4.3. E-model	98
4.4. DRX mechanism	100
4.5. Methodology and implementation	103
4.5.1. Traditional algorithms	104
4.5.2. Proposed QEPeM	105
4.5.3. Scheduler architecture	106
4.5.4. Scheduling algorithm	108
4.6. Simulation setup	109
4.7. Performance analysis with a fixed Deep Sleep duration of 20 ms	110
4.8. Performance analysis with a fixed Light Sleep duration of 10 ms	118
4.9. Conclusion	124

Chapter 5. QoE and Power-saving

Model for 5G Network	127
5.1. Introduction	128
5.2. QoE and 5G network	130
5.2.1. Cloud-based future cellular network	131
5.2.2. Traffic model	131
5.2.3. QoE modeling and measurement	133
5.3. Optimization models	134
5.3.1. Network design	134
5.3.2. QoE	136
5.4. Results	138
5.5. Power-saving mechanism for UE and VBS	142
5.5.1. User equipment (UE)	142
5.5.2. Base station	144

5.6. Energy consumption model	145
5.6.1. Virtual base station	145
5.6.2. User equipment	148
5.7. Results	151
Conclusion	161
Bibliography	167
Index	179
